**Audiovisual translation in the foreign language classroom: applications in the teaching of English and other foreign languages** Jennifer Lertola,2019-02-28 The aim of this book is to systematically review studies on the applications of captioning (subtitling) and revoicing (dubbing, audio description, and voice-over) in the foreign language classroom, in order to offer an overview of the state of the art and encourage further research. The literature review presents research on the topic, paying particular attention to relevant experimental studies (i.e. empirical research that involves data collection, and not just a mere description of the experience or the learners’ outcomes), examined in terms of research focus, target languages, participants, learning settings, audiovisual materials, captioning/revoicing software, and type of analysis (i.e. qualitative and/or quantitative).

**ACS Style Guide** Anne M. Coghill,Lorin R. Garson,2006 In the time since the second edition of *The ACS Style Guide* was published, the rapid growth of electronic communication has dramatically changed the scientific, technical, and medical (STM) publication world. This dynamic mode of dissemination is enabling scientists, engineers, and medical practitioners all

over the world to obtain and transmit information quickly and easily. An essential constant in this changing environment is the requirement that information remain accurate, clear, unambiguous, and ethically sound. This extensive revision of The ACS Style Guide thoroughly examines electronic tools now available to assist STM writers in preparing manuscripts and communicating with publishers. Valuable updates include discussions of markup languages, citation of electronic sources, online submission of manuscripts, and preparation of figures, tables, and structures. In keeping current with the changing environment, this edition also contains references to many resources on the internet. With this wealth of new information, The ACS Style Guide's Third Edition continues its long tradition of providing invaluable insight on ethics in scientific communication, the editorial process, copyright, conventions in chemistry, grammar, punctuation, spelling, and writing style for any STM author, reviewer, or editor. The Third Edition is the definitive source for all information needed to write, review, submit, and edit scholarly and scientific manuscripts.

**Grammar for Teachers** Andrea DeCapua, 2008-01-31 The purpose of Grammar for Teachers is to encourage readers to develop a solid understanding of the use and function of grammatical structures in American English. It approaches grammar from a descriptive rather than a prescriptive approach; however, throughout the book differences between formal and informal language, and spoken and written English are discussed. The book avoids jargon or excessive use of technical terminology. It makes the study of grammar interesting and relevant by presenting grammar in context and by using authentic material from a wide variety of sources.

The Sourcebook for Teaching Science, Grades 6-12 Norman Herr, 2008-08-11 The Sourcebook for Teaching Science is a unique, comprehensive resource designed to give middle and high school science teachers a wealth of information that will enhance any science curriculum. Filled with innovative tools, dynamic activities, and practical lesson plans that are grounded in theory, research, and national standards, the book offers both new and experienced science teachers powerful strategies and original ideas that will enhance the teaching of physics, chemistry, biology, and the earth and space sciences.

Digital Design with Chisel Martin Schoeberl, 2019-08-30 This book is an introduction into digital design with the focus on using the hardware construction language Chisel. Chisel brings advances from software engineering, such as object-orientated and functional languages, into digital design. This book addresses hardware designers and software engineers. Hardware designers, with knowledge of Verilog or VHDL, can upgrade their productivity with a modern language for their next ASIC or FPGA design. Software engineers, with knowledge of object-oriented and functional programming, can leverage their knowledge to program hardware, for example, FPGA accelerators executing in the cloud. The approach of this book is to present small to medium-sized typical hardware components to explore digital design with Chisel.

**Proceedings of the 8th International Conference on Sciences of Electronics, Technologies of Information and Telecommunications (SETIT'18), Vol.1** Med Salim Bouhlef, Stefano Rovetta, 2019-07-10 This two-volume book presents an unusually diverse selection of research papers, covering all major topics in the fields of information and communication technologies and related sciences. It provides a wide-angle snapshot of current themes in information and power engineering, pursuing a cross-disciplinary approach to do so. The book gathers revised contributions that were presented at the 2018 International Conference: Sciences of Electronics, Technologies of Information and Telecommunication (SETIT'18), held on 20-22 December 2018 in Hammamet, Tunisia. This eighth installment of the event attracted a wealth of submissions, and the papers presented here were selected by a committee of experts and underwent additional, painstaking revision. Topics covered include: · Information Processing · Human-Machine Interaction · Computer Science · Telecommunications and Networks · Signal Processing · Electronics · Image and Video This broad-scoped approach is becoming increasingly popular in scientific publishing. Its aim is to encourage scholars and professionals to overcome disciplinary barriers, as demanded by current trends in the industry and in the consumer market, which are rapidly leading toward a convergence of data-driven applications, computation, telecommunication, and energy awareness. Given its coverage, the book will benefit graduate students, researchers and practitioners who need to keep up with the latest technological advances.

**Bebop to the Boolean Boogie** Clive Maxfield, 2008-12-05 This entertaining and readable book provides a solid, comprehensive introduction to contemporary electronics. It's not a how-to-do electronics book, but rather an in-depth explanation of how today's integrated circuits work, how they are designed and manufactured, and how they are put together into powerful and sophisticated electronic systems. In addition to the technical details, it's packed with practical information of interest and use to engineers and support personnel in the electronics industry. It even tells how to pronounce the alphabet soup of acronyms that runs rampant in the industry. - Written in conversational, fun style that has generated a strong following for the author and sales of over 14,000 copies for the first two editions - The Third Edition is even bigger and better, with lots of new material, illustrations, and an expanded glossary - Ideal for training incoming engineers and technicians, and for people in marketing or other related fields or anyone else who needs to familiarize themselves with electronics terms and technology

**Assessing the Future Landscape of Scholarly Communication** Diane Harley, 2010 Results of research conducted between 2007 and 2010. In the interest of developing a deeper understanding of how and why scholars do what they do to advance their academic fields, as well as their careers, our approach focused on fine grained analyses of faculty values and behaviors throughout the scholarly communication lifecycle, including career advancement, sharing, collaborating, informal and formal publishing, resource generation, and engaging with the public. The report is based on the responses of 160 interviewees across 45, mostly elite, research institutions in seven selected academic fields: archaeology, astrophysics,

biology, economics, history, music, and political science. We concentrated on assessing scholars' attitudes and needs as both producers and users of research results.

Culinary Linguistics Cornelia Gerhardt, Maximiliane Frobenius, Susanne Ley, 2013-07-04 Language and food are universal to humankind. Language accomplishes more than a pure exchange of information, and food caters for more than mere subsistence. Both represent crucial sites for socialization, identity construction, and the everyday fabrication and perception of the world as a meaningful, orderly place. This volume on Culinary Linguistics contains an introduction to the study of food and an extensive overview of the literature focusing on its role in interplay with language. It is the only publication fathoming the field of food and food-related studies from a linguistic perspective. The research articles assembled here encompass a number of linguistic fields, ranging from historical and ethnographic approaches to literary studies, the teaching of English as a foreign language, psycholinguistics, and the study of computer-mediated communication, making this volume compulsory reading for anyone interested in genres of food discourse and the linguistic connection between food and culture. How to Kill a Dragon Calvert Watkins, 1995 In *How to Kill a Dragon* Calvert Watkins follows the continuum of poetic formulae in Indo-European languages, from Old Hittite to medieval Irish. He uses the comparative method to reconstruct traditional poetic formulae of considerable complexity that stretch as far back as the original common language. Thus, Watkins reveals the antiquity and tenacity of the Indo-European poetic tradition. Watkins begins this study with an introduction to the field of comparative Indo-European poetics; he explores the Saussurian notions of synchrony and diachrony, and locates the various Indo-European traditions and ideologies of the spoken word. Further, his overview presents case studies on the forms of verbal art, with selected texts drawn from Indic, Iranian, Greek, Latin, Hittite, Armenian, Celtic, and Germanic languages. In the remainder of the book, Watkins examines in detail the structure of the dragon/serpent-slaying myths, which recur in various guises throughout the Indo-European poetic tradition. He finds the signature formula for the myth--the divine hero who slays the serpent or overcomes adversaries--occurs in the same linguistic form in a wide range of sources and over millennia, including Old and Middle Iranian holy books, Greek epic, Celtic and Germanic sagas, down to Armenian oral folk epic of the last century. Watkins argues that this formula is the vehicle for the central theme of a proto-text, and a central part of the symbolic culture of speakers of the Proto-Indo-European language: the relation of humans to their universe, the values and expectations of their society. Therefore, he further argues, poetry was a social necessity for Indo-European society, where the poet could confer on patrons what they and their culture valued above all else: imperishable fame.

words.

Discourse, Tools and Reasoning Lauren B. Resnick, 1997-11-20 To reason is to talk. To think is to use tools. To learn is to join a community of practice. This book explores thought and reasoning as inherently social practices, as actions situated in specific environments of demand, opportunity, and accountability. Authors from diverse disciplines - psychology, sociology, artificial intelligence, linguistics, anthropology - examine how people think and learn in settings as diverse as a factory, a classroom or an airplane cockpit. The tools that people use in these varied settings are both physical technologies and cultural constructions: concepts, structures of reasoning, and forms of discourse. This volume in the NATO Special Programme on Advanced Educational Technology is based on an international conference on situated cognition and learning technologies.

**Leviathan and the Air-Pump** Steven Shapin, Simon Schaffer, 2011-09-04 Leviathan and the Air-Pump examines the conflicts over the value and propriety of experimental methods between two major seventeenth-century thinkers: Thomas Hobbes, author of the political treatise Leviathan and vehement critic of systematic experimentation in natural philosophy, and Robert Boyle, mechanical philosopher and owner of the newly invented air-pump. The issues at stake in their disputes ranged from the physical integrity of the air-pump to the intellectual integrity of the knowledge it might yield. Both Boyle and Hobbes were looking for ways of establishing knowledge that did not decay into ad hominem attacks and political division. Boyle proposed the experiment as cure. He argued that facts should be manufactured by machines like the air-pump so that gentlemen could witness the experiments and produce knowledge that everyone agreed on. Hobbes, by contrast, looked for natural law and viewed experiments as the artificial, unreliable products of an exclusive guild. The new approaches taken in Leviathan and the Air-Pump have been enormously influential on historical studies of science. Shapin and Schaffer found a moment of scientific revolution and showed how key scientific givens--facts, interpretations, experiment, truth--were fundamental to a new political order. Shapin and Schaffer were also innovative in their ethnographic approach. Attempting to understand the work habits, rituals, and social structures of a remote, unfamiliar group, they argued that politics were tied up in what scientists did, rather than what they said. Steven Shapin and Simon Schaffer use the confrontation between Hobbes and Boyle as a way of understanding what was at stake in the early history of scientific experimentation. They describe the protagonists' divergent views of natural knowledge, and situate the Hobbes-Boyle disputes within contemporary debates over the role of intellectuals in public life and the problems of social order and assent in Restoration England. In a new introduction, the authors describe how science and its social context were understood when this book was first published, and how the study of the history of science has changed since then.

*Widening the Circle* Mara Sapon-Shevin,2007-03-15 *Widening the Circle* is a passionate, even radical argument for creating school and classroom environments where all kids, including children labeled as disabled and special needs, are welcome on equal terms. In opposition to traditional models of special education, where teachers decide when a child is deemed ready to compete in mainstream classes, Mara Sapon-Shevin articulates a vision of full inclusion as a practical and moral goal. Inclusion, she argues, begins not with the assumption that students have to earn their way into the classroom with their behavior or skills, it begins with the right of every child to be in the mainstream of education, perhaps with modifications, adaptations, and support. Full inclusion requires teachers to think about all aspects of their classrooms—pedagogy, curriculum, and classroom climate. Crucially, Sapon-Shevin takes on arguments against full inclusion in a section of straight-talking answers to common questions. She agrees with critics that the rhetoric of inclusion has been used to justify eliminating services and dumping students with significant educational needs unceremoniously back into the mainstream with little or no support. If full inclusion is properly implemented, however, she argues, it not only clearly benefits those traditionally excluded but enhances the educations and lives of those considered mainstream in myriad ways. Through powerful storytelling and argument, Sapon-Shevin lays out the moral and educational case for not separating kids on the basis of difference.
