Master Your Workday Now! Michael Linenberger,2010 Comparable to such classics as Stephen Covey's The Seven Habits of Highly Effective People, this new title presents fresh and profound strategies for reaching success in one's workday and life.

The Ability Hacks Peter Lee,Jenny Lay-Flurrie,Greg Shaw,2018-06-27 The Ability Hacks is the story of two Microsoft hackathon teams, one in the summer of 2014 and one the following summer of 2015. The first would pioneer new software to revolutionize the mobility of tens of thousands of people who live with severe paralysis caused by ALS, Parkinson's, cerebral palsy and traumatic neurological injuries. The second team would pioneer software to help kids with dyslexia read and love learning for the first time in their lives. This is the story of two small groups of driven, focused and passionate software engineers, program managers, marketers and advocates. It's the story of realizing the transformative power of technology for people with disabilities, not just for traditional consumer and industrial markets. It's the story of doing something truly great -- improving outcomes for everyone, discovering a design ethos and blazing a new trail for accessibility. Read more:More than one billion people around the world live with a disability of some kind, and it's estimated two-thirds of us know someone with a disability. Almost everyone will be temporarily or permanently impaired at some point in life, and those who survive to old age will experience increasing difficulties in functioning, according to the World Health Organization. This book explores an optimistic belief that computer software and hardware can empower people with disabilities in a multitude of scenarios. As one engineer interviewed for The Ability Hacks said, It's not about the technology. It's about the people.

Reimagining Boredom in Classrooms through Digital Game Spaces Noreen Dunnett,2024-03-05 This book challenges common understandings of boredom and disengagement in classrooms, taking a relational approach to boredom which looks beyond the usual distinctions between in-school and out-of-school practices. The book explores how a sociomaterial perspective can provide an alternative analysis of boredom as performative, and as a phenomenon assembled in space and time rather than as a psychological attribute of the individual student. This perspective explores the affective experience of learning and how it is created in the classroom through assemblages of people, technology, objects and environment and the differing relations within them. Drawing on empirical data from a case study which compares formal learning and digital

gaming practices in a group of secondary schools in England, the book suggests that by altering the affordances and constraints available in learning situations we can prevent boredom and disengagement emerging in the classroom. This innovative book proposes that the mobility and dynamism of game spaces offer us new ways to re-imagine engagement in learning and will be of relevance to scholars, researchers and postgraduate students in the fields of teaching and learning, digital gaming, educational philosophy and educational technology.
