This book presents MOSFET-based current mode logic (CML) topologies, which increase the speed, and lower the transistor count, supply voltage and power consumption. The improved topologies modify the conventional PDN, load, and the current source sections of the basic CML gates. Electronic system implementation involves embedding digital and analog circuits on a single die shifting towards mixed-mode circuit design. The high-resolution, low-power and low-

voltage analog circuits are combined with high-frequency complex digital circuits, and the conventional static CMOS logic generates large current spikes during the switching (also referred to as digital switching noise), which degrade the resolution of the sensitive analog circuits via supply line and substrate coupling. This problem is exacerbated further with scaling down of CMOS technology due to higher integration levels and operating frequencies. In the literature, several methods are described to reduce the propagation of the digital switching noise. However, in high-resolution applications, these methods are not sufficient. The conventional CMOS static logic is no longer an effective solution, and therefore an alternative with reduced current spikes or that draws a constant supply current must be selected. The current mode logic (CML) topology, with its unique property of requiring constant supply current, is a promising alternative to the conventional CMOS static logic.

This is the first volume to take a broad historical sweep of the close relation between medicines and poisons in the Western tradition, and their interconnectedness.

They are like two ends of a spectrum, for the same natural material can be medicine or poison, depending on the dose, and poisons can be transformed into medicines, while medicines can turn out to be poisons. The book looks at important moments in the history of the relationship between poisons and medicines in

European history, from Roman times, with the Greek physician Galen, through the Renaissance and the maverick physician Paracelsus, to the present, when poisons are actively being turned into beneficial medicines.

There is growing acceptance that the progress delivered under the Millennium Development Goal target for

drinking water and sanitation has been inequitable. As a result, the progressive reduction of inequalities is now an explicit focus of the Sustainable Development Goal (SDG) targets, adopted in 2015, for universal access to drinking water, sanitation and hygiene (WASH). This shift in focus has implications for the way in which the next generation of WASH policies and programmes will be conceived, designed, financed and monitored. This book provides an authoritative textbook for students, as well as a point of reference for policy-makers and practitioners interested in reducing inequalities in access to WASH services. Four key areas are addressed: background to the human right to water and development goals; dimensions of inequality; case studies in delivering water and sanitation equitably; and monitoring progress in reducing inequality.

This book discusses the use of the spectrum sharing
techniques in cognitive radio technology, in order to
address the problem of spectrum scarcity for future
wireless communications. The authors describe a
cognitive radio medium access control (MAC) protocol,
with which throughput maximization has been achieved.
The discussion also includes use of this MAC protocol
for imperfect sensing scenarios and its effect on the
performance of cognitive radio systems. The authors
also discuss how energy efficiency has been maximized
in this system, by applying a simple algorithm for

What are public health services? Countries across Europe

understand what they are, or what they should include, differently. This study describes the experiences of nine countries, detailing the ways they have opted to organize and finance public health services and train and employ their public health workforce. It covers England, France, Germany, Italy, the Netherlands, Slovenia, Sweden, Poland and the Republic of Moldova, and aims to give insights into current practice that will support decision-makers in their efforts to strengthen public health capacities and services. Each country chapter captures the historical background of public health services and the context in which they operate; sets out the main organizational structures; assesses the sources of public health financing and how it is allocated; explains the training and employment of the public health workforce; and analyzes existing frameworks for quality and performance assessment. The study reveals a wide range of experience and variation across Europe and clearly illustrates two fundamentally different approaches to public health services: integration with curative health services (as in Slovenia or Sweden) or organization and provision through a separate parallel structure (Republic of Moldova). The case studies explore the context that explain this divergence and its implications. This study is the result of close collaboration between the European Observatory on Health Systems and Policies and the WHO Regional Office for Europe, Division of Health Systems and Public Health. It accompanies two other Observatory publications Organization and financing of public health services in Europe and The role of public health organizations in addressing public health problems in Europe: the case of obesity, alcohol and antimicrobial resistance (both forthcoming).

Active botanical ingredients are a prime requirement for herbal formulations and discovering a drug is all about integration of science disciplines. In recent decades there has been a growing interest in treating wounds and diseases using traditional remedies based on local herbs, combined with chemical advances. Although this has led to the development of new bioactive ingredients from plants, there has been little success in terms of clinical trials and post-marketing studies to comply with FDA guidelines. Plants have been used as a source of medicine throughout history and continue to serve as the basis for many pharmaceuticals used today. However, despite the modern pharmaceutical industry being founded on botanical medicine, synthetic approaches

to drug discovery have now become standard. Science-driven translational discovery and botanical development has created a new reality, leading to enormous changes in strategies, technologies and the disciplines involved, which have been embraced by the pharmaceutical and biotech industries. This book gathers scientific expertise and traditional knowledge to promote the discovery and development of new formulations and drugs based on active ingredients and to provide guidance on taking these to clinical trials. It discusses major topics, such as how the phytochemical composition of many plants has changed over time due to factors like cultivation, which can have both positive and negative effects on the levels of bioactive compounds. It also explores the importance of plants as a valuable source of therapeutic compounds as a result of their vast biosynthetic capacity, and classifies them according to their intended use, safety and regulatory status. Further, the book offers insights into the regulatory aspects of botanical products, which is an important issue when considering standardization and quality assessment, and also examines the commercial aspects of plant-derived medications and their proven role in the treatment of chronic diseases such as heart disease, high blood pressure, pain, asthma, and other associated conditions. Given its scope, this book is a valuable tool for botanists, natural product chemists, pharmacologists and microbiologists involved in the study of phytochemicals for drug discovery.

How are public health services in Europe organized and financed? With European health systems facing a plethora of challenges that can be addressed through public health interventions there is renewed interest in strengthening public health services. Yet there are enormous gaps in our knowledge. How many people work in public health? How much money is spent on public health? What does it actually achieve? None of these questions can be answered easily. This volume brings together current knowledge on the organization and financing of public health services in Europe. It is based on country reports on the organization

and financing of public health services in nine European countries and an in-depth analysis of the involvement of public health services in addressing three contemporary public health challenges (alcohol obesity and antimicrobial resistance). The focus is on four core dimensions of public health services: organization financing the public health workforce and quality assurance. The questions the volume seeks to answer are: o How are public health services in Europe organized? Are there good practices that can be emulated? What policy options are available? o How much is spent on public health services? Where do resources come from? And what was the impact of the economic crisis? o What do we know about the public health workforce? How can it be strengthened? o How is the quality of public health services being assured? What should quality assurance systems for public health services look like? This study is the result of close collaboration between the European Observatory on Health Systems and Policies and the WHO Regional Office for Europe Division of Health Systems and Public Health. It accompanies two other Observatory publications: Organization and financing of public health services in Europe: country reports and The role of public health organizations in addressing public health problems in Europe: the case of obesity alcohol and antimicrobial resistance.

This handbook addresses the delivery of high quality pediatric behavioral healthcare services that are multitiered, evidence-based, and integrated, involving interprofessional collaboration across child serving systems, such as pediatrician offices and schools. The book sets forth a contemporary, leading edge approach that reflects the relationship between biological and psychosocial development and the influence of multiple systems, including the family, community, school, and the healthcare system on child development and functioning. It assists child-focused providers in developing knowledge about the relationship between biological and psychosocial development and between pediatric physical health and behavioral health problems. Chapters cover common chronic illnesses and behavioral conditions and include guidelines for screening, assessment, diagnosis, prevention, and coordinated intervention. Chapters also include representative case studies that help illustrate efficacious, effective service-delivery approaches. The handbook concludes with recommendations for future research and directions for integrated pediatric behavioral healthcare. Topics featured in the Handbook include: Behavioral health aspects of chronic physical health conditions, including asthma, diabetes, chronic pain, traumatic brain injury, and cancer. Physical health implications of behavioral

health and educational problems, including ADHD, learning disabilities, substance abuse, and ASD. Coping with chronic illness and medical stress. Patient adherence to medical recommendations and treatments. School reintegration after illness. The Handbook of Pediatric Behavioral Healthcare is a must-have resource for researchers, professors, and graduate students as well as clinicians, therapists, and other practitioners in clinical child and school psychology, primary care medicine, social work, child and adolescent psychiatry, public health, health psychology, pediatric medicine, nursing, behavioral therapy, rehabilitation, and counseling.

This book raises questions about the changing relationships between technology, people and

health. It examines the accelerating pace of technological development and a general shift to personalized, patient-led medicine. Such relationships are increasingly mediated through particular medical technologies, drawn together by the authors as ‘personal medical devices’ (PMDs) – devices that are attached to, worn by, interacted with, or carried by individuals for the purposes of generating biomedical data and carrying out medical interventions on the person concerned. The burgeoning PMD field is advancing rapidly across multiple domains and disciplines – so rapidly that conceptual and empirical research and thinking around PMDs, and their clinical, social and philosophical implications, often lag behind new technical developments and medical interventions. This timely and original volume explores the significant and under-researched impact of personal medical devices on contemporary understandings of health and illness. It will be a valuable read for scholars and practitioners of medicine, health, science and technology and social science. The 2018 Asia Conference on Material and Manufacturing Technology (ACMMT 2018), was held in Beijing, China, September 14-16, 2018.
