A lively, integrated approach that emphasizes the connection of the reading and writing processes Pathways: Scenarios for Paragraph and Sentence Writing, Fourth Edition teaches fundamental sentence and paragraph writing skills by engaging student interest, maintaining a focus on expressing ideas rather than on following rules. Students learn grammar in the context of the "whole paper." Seven of the 17 chapters deal with grammar topics; in these chapters, students examine student essays, read and respond to ideas, and write and revise paragraphs. In Parts II through IV, students apply what they have learned about sentence-level correctness to their own writing as they explore logical paragraph development and organization of ideas. The last two chapters introduce essay writing, enabling students to accelerate from paragraphs to essays, with the goal of achieving stronger, more fully developed writing skills. Personalize Learning with MyWritingLab(tm) MyWritingLab is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. We live in a data-driven world, and the goal of this Canadian text is to teach students how to access and analyze these data critically. Canadian authors Jim Stallard and Michelle Boué emphasize that learning statistics extends beyond the classroom to an essential life skill, and want Canadian students to develop a "data habit of mind." Regardless of their math backgrounds, students will learn how to think about data and how to reason using data. With a clear, unimimidating writing style and carefully chosen pedagogy, this text makes data analysis accessible to all students. KEY TOPICS: Introduction to Data; Picturing Variation with Graphs; Numerical Summaries of Centre and Variation; Regression Analysis: Exploring Associations between Variables; Modelling Variation with Probability; Modeling Random Events: The Normal and Binomial Models; Survey Sampling and Inference; Hypothesis Testing for Population Proportions; Inferring Population Means; Associations between Categorical Variables; Multiple Comparisons and Analysis of Variance; Experimental Design: Controlling Variation; Inference without Normality; Inference for Regression MARKET: A textbook suitable for all introductory statistics courses Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and

Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them.
