How does a bird experience a city? A backyard? A park? As the world has become more urban, noisier from increased traffic, and brighter from streetlights and office buildings, it has also become more dangerous for countless species of birds. Warblers become disoriented by nighttime lights and collide with buildings. Ground-feeding sparrows fall prey to feral cats. Hawks and other birds-of-prey are sickened by rat poison. These name just a few of the myriad hazards. How do our cities need to change in order to reduce the threats, often created unintentionally, that have resulted in nearly three billion birds lost in North America alone since the 1970s? In *The Bird-Friendly City*, Timothy Beatley, a longtime advocate for intertwining the built and natural

environments, takes readers on a global tour of cities that are reinventing the status quo with birds in mind. Efforts span a fascinating breadth of approaches: public education, urban planning and design, habitat restoration, architecture, art, civil disobedience, and more. Beatley shares empowering examples, including: advocates for “catios,” enclosed outdoor spaces that allow cats to enjoy backyards without being able to catch birds; a public relations campaign for vultures; and innovations in building design that balance aesthetics with preventing bird strikes. Through these changes and the others Beatley describes, it is possible to make our urban environments more welcoming to many bird species. Readers will come away motivated to implement and advocate for bird-friendly changes, with inspiring examples to draw from. Whether birds are migrating and need a temporary shelter or are taking up permanent residence in a backyard, when the environment is safer for birds, humans are happier as well.

The Windward Road, published in 1956, made history. When Archie Carr began to rove the Caribbean to write about sea turtles, he saw that their numbers were dwindling. Out of this appeal to save them grew the first ventures in international sea turtle conservation and the establishment of the Caribbean Conservation Corporation. In addition to sea turtle biology, Carr recorded his general impressions, producing a natural history sprinkled with colorful stories.

Welcome to the wild world of sea turtles! In this intro to the species, youngsters discover where on Earth this reptile lives, what it eats, and how big it grows. Cool photos of all the different kinds of sea turtles and adorable photos of just-hatched turtle babies bring the creatures into full focus. After learning the basics, young readers will learn why sea turtles need our help and what people around the world are doing to help save them. Filled with fun facts, games, and an activity focused on making a difference in sea turtles' world, Go Wild! will inspire kids to care about this swimmingly cute animal.

Discover the plants and animals of the rainforest, and how we can protect them, in this beautifully illustrated children's ebook. Embark on a journey through the enchanting world of the rainforest in Charlotte Milner's beautifully illustrated *The Rainforest Book*. Sweep aside the liana vines, hop over the giant roots of the kapok tree, and follow the sound of the howler monkey as you venture into the tropical rainforest. Find out about some of the amazing animals that live there, learn about the enormous variety of life-giving plants, and discover why the Amazon rainforest is known as the 'lungs' of our Earth. In this beautiful ebook, Charlotte Milner continues to highlight the important ecological issues faced by our planet, following on from *The Bee Book*, *The Sea Book*, and *The Bat Book*. Did you know that over half of our planet's wildlife live in the rainforest? And that at least two meters of rain falls in the rainforest every year? The world's rainforests are packed with amazing animals and plants, from the deadly poison dart frog, to the stinky rafflesia flower--there is plenty to discover! As our planet's climate crisis becomes even more critical, with forest fires raging in the Amazon, *The Rainforest Book* is the perfect way to introduce little nature-lovers to this enchanting yet threatened world. This celebration of the rainforest shows children just how important it is, and reminds them that it is up to us to care for our planet and its wildlife.

The Turtle Lady of St. Kitts, also known as Dr. Kimberly Stetwart, is already waiting at midnight when an 800-pound leatherback sea turtle crawls awkwardly out of the Caribbean surf and on to the sandy beach. The

mother turtle has a job to do, and it's a vital one: dig a nest where she will lay eggs that will hatch into part of the next generation of leatherbacks. With only one in a thousand of the eggs for this critically endangered species producing an adult sea turtle, the odds are stacked against her and her offspring. Lying in the sand on the dark beach, Kimberly is hard at work, too: taking samples and measurements from mother turtles, counting eggs as they're laid, and even relocating vulnerable nests. But sea turtle conservation is about more than beachcombing and observation. It also requires dedication to the turtles as well as to the communities where the nesting sites lie, and where fishing for sea turtles can provide much-needed income—and even food. Join renowned author and photographer Steve Swinburne on a journey through history to examine the rise of the leatherback and other sea turtles. Learn how they came to be endangered and how they can be saved. as well as North Korean and more generally Korean and East Asian studies. There is increasing global interest in North Korea, its politics, people and landscapes, and as such, this book describes encounters with North Korean fishing communities, as well as unusual moments in the field in the People's Republic of China, the Russian Federation and the Republic of Korea (South Korea). It addresses fish, fishing infrastructure, fishing science and fishing statistics and other non-human elements of North Korean and other nations' developmental regimes as actors and participants within them as much as humans and their technologies. The book enables readers to gain extensive insights into the aspirations and practices of fishing in North Korea and its neighbours, the navigation of difficult political and developmental situations and changing ecological realities in a time of environmental and climate crisis familiar to many across the globe.

With a nod to Richard Scarry, this inventive picture book surprises readers with every turn of the page! Hiss! Screech! Roar! It's a noisy day in Bumperville! But are the sounds what you think they are? That Honk! must surely be a goose. But turn the page and it's the taxi that a goose is driving! Using cleverly placed die-cuts, this inventive book hints at what is making the sound, but with each turn of the page, it's an eye-opening surprise and part of an unfolding story that is part guessing game and part giggle-inducing caper. Abi Cushman is the master of surprise and silliness in this absolutely delightful picture book.

The IOPA-IUU is a voluntary instrument that applies to all States and entities and to all fishers. Following the IPOA's introduction, the nature and scope of IUU fishing is addressed. This is followed by the IPOA's objective and principles and the implementation of measures to prevent, deter and eliminate IUU fishing. These measures focus on all State responsibilities, flag State responsibilities, coastal State measures, port State measures, internationally agreed market-related measures, research and regional fisheries management organizations.

Deep beneath the sand on a warm, tropical beach, a little sea turtle breaks out of its egg, crawls up through the sand, and emerges into the world. The ocean is just a few feet away, but numerous predators are waiting for the hatchling and its siblings to make their run to the ocean. So begins the life of a green sea turtle! In this coming-of-age introduction to these marine reptiles, readers will learn how mother turtles bury their eggs on beaches and then return to the ocean. The little hatchlings, with no parent to protect them, eventually have to leave their nests and make a danger-filled dash to the ocean. Then, these water babies must fend for themselves out at sea, finding food and avoiding enemies until they grow to become one of the largest reptiles on Earth. The colorful interior spreads and gorgeous photos of sea turtle hatchlings are sure to delight emergent readers.

of the natural world, revealing how connections in nature promise a thriving economy as well as a healthy planet. Enric Sala wants to change the world--and in this compelling book, he shows us how. Once we appreciate how nature works, he asserts, we will understand why conservation is economically wise and essential to our survival. Here Sala, director of National Geographic's Pristine Seas project (which has succeeded in protecting more than 5 million sq km of ocean), tells the story of his scientific awakening and his transition from academia to activism--as he puts it, he was tired of writing the obituary of the ocean. His revelations are surprising, sometimes counterintuitive: More sharks signal a healthier ocean; crop diversity, not intensive monoculture farming, is the key to feeding the planet. Using fascinating examples from his expeditions and those of other scientists, Sala shows the economic wisdom of making room for nature, even as the population becomes more urbanized. In a sober epilogue, he shows how saving nature can save us all, by reversing conditions that led to the coronavirus pandemic and preventing other global catastrophes. With a foreword from Prince Charles and an introduction from E. O. Wilson, this powerful book will change the way you think about our world--and our future.
