Set in Canada and the battlefields of France and Belgium, *Three-Day Road* is a mesmerizing novel told through the eyes of Niska—a Canadian Oji-Cree woman living off the land who is the last of a line of healers and diviners—and her nephew Xavier. At the urging of his friend Elijah, a Cree boy raised in reserve schools, Xavier joins the war effort. Shipped off to Europe when they are nineteen, the boys are marginalized from the Canadian soldiers not only by their native appearance but also by the fine marksmanship that years of hunting in the bush has taught them. Both become snipers renowned for their uncanny accuracy. But while Xavier struggles to understand the purpose of the war and to come to terms with his conscience for the many lives he has ended, Elijah becomes obsessed with killing, taking great risks to become the most accomplished sniper in the army. Eventually the harrowing and bloody truth of war takes its toll on the two friends in different, profound ways. Intertwined with this account is the story of Niska, who herself has borne witness to a lifetime of death—the death of her people. In part inspired by the legend of Francis Pegahmagabow, the great Indian sniper of World War I, *Three-Day Road* is an impeccably researched and beautifully written story that offers a searing

reminder about the cost of war.

The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI) programs. To receive SSDI or SSI disability benefits, an individual must meet the statutory definition of disability, which is "the inability to engage in any substantial gainful activity [SGA] by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months." SSA uses a five-step sequential process to determine whether an adult applicant meets this definition. Functional Assessment for Adults with Disabilities examines ways to collect information about an individual's physical and mental (cognitive and noncognitive) functional abilities relevant to work requirements. This report discusses the types of information that support findings of limitations in functional abilities relevant to work requirements, and provides findings and conclusions regarding the collection of information and assessment of functional abilities relevant to work requirements.

Immigration, Integration and Education offers a unique comparative analysis of the views and experiences of children of immigrants in school in France and England. It showcases how the theorization of children's narratives can offer new methodological tools and insights in comparative education and help understand the different role of educational systems and discourses around issues of immigration, integration, race, language and religion. Presenting an in-depth analysis of children's own narratives, this book offers a close comparative examination of the French and English educational systems, and the ways in which they impact on the experiences and identities of children of immigrants. The narratives of the children reveal the multiple forms of othering, discrimination and exclusion that shape their experiences in school, but also the multiple strategies they deploy to navigate these complex educational landscapes. It stresses that beyond national ideologies and philosophies of integration, structural and cultural aspects need to be explored to understand the role played by schools in the inclusion of immigrant populations. This book is an essential resource for academics, researchers and graduate students in the fields of sociology of education, migration studies, intercultural education, educational policy and comparative and international education. It will also appeal to those who are committed to addressing inequalities and discrimination in education.
