**The Self-Regulated Learning Guide** Timothy J. Cleary, 2018-02-01 The Self-Regulated Learning Guide introduces K-12 teachers to the basics of self-regulation. Highly practical and supported by cutting-edge research, this book offers a variety of techniques for seamlessly infusing self-regulated learning principles into the classroom and for nurturing students' motivation to strategize, reflect, and succeed. Featuring clear explanations of the psychology of self-regulation, these nine chapters provide teachers with core concepts, realistic case scenarios, reflection activities, and more to apply SRL concepts to classroom activities with confidence.

**The Making of the Fittest: DNA and the Ultimate Forensic Record of Evolution** Sean B. Carroll, 2007-08-28 A geneticist discusses the role of DNA in the evolution of life on Earth, explaining how an analysis of DNA reveals a complete record of the events that have shaped each species and how it provides evidence of the validity of the theory of evolution.

**Modeling Dynamic Biological Systems** Bruce Hannon, Matthias Ruth, 2012-12-06 Models help us understand the dynamics of real-world processes by using the computer to mimic the actual forces that are known or assumed to result in a system's behavior. This book does not require a substantial background in mathematics or computer science.

*Where Biology Meets Psychology* Valerie Gray Hardcastle, 1999 A great deal of interest and excitement surround the interface between the philosophy of biology and the philosophy of psychology, yet the area is neither well defined nor well represented in mainstream philosophical publications. This book is perhaps the first to open a dialogue between the two disciplines. Its aim is to broaden the traditional subject matter of the philosophy of biology while informing the philosophy of psychology of relevant biological constraints and insights. The book is organized around six themes: functions and teleology, evolutionary psychology, innateness, philosophy of mind, philosophy of science, and parallels between philosophy of biology and philosophy of mind. Throughout, one finds overlapping areas of study, larger philosophical implications, and even larger conceptual ties. Woven through these connections are shared concerns about the status of semantics, scientific law, evolution and adaptation, and cognition in general. Contributors André Ariew, Mark A. Bedau, David J. Buller, Paul Sheldon Davies, Stephen M. Downes, Charbel Niño El-Hani, Owen Flanagan, Peter Godfrey-Smith, Todd Grantham, Valerie Gray Hardcastle, Gary Hatfield, Daniel W. Genesis Kinds Todd Charles Wood, Paul A. Garner, 2009-01-22 A belief in creationism, even in young-age creationism, does not necessitate belief in the unique creation of each species. Instead, many creationists accept a secondary origin of species from ancestors originally created by God. In this view, groups of modern species constitute the Genesis kinds that God originally created and beyond which evolution cannot proceed (if it can even be called 'evolution'). In this collection of papers, six scholars examine the species and the Genesis kinds. Topics covered include the history of creationist and Christian perspectives on the origin of species, an analysis of the Hebrew word *min* (kind) from the perspective of biblical theology, a baseline of minimum speciation within kinds inferred from island endemics, a comprehensive list of proposed kinds from the mammalian fossil record, the occurrence of discontinuity between kinds, and the origin of new species by symbiosis. - Abstract.

Skills,2013-01-18 Americans have long recognized that investments in public education contribute to the common good, enhancing national prosperity and supporting stable families, neighborhoods, and communities. Education is even more critical today, in the face of economic, environmental, and social challenges. Today's children can meet future challenges if their schooling and informal learning activities prepare them for adult roles as citizens, employees, managers, parents, volunteers, and entrepreneurs. To achieve their full potential as adults, young people need to develop a range of skills and knowledge that facilitate mastery and application of English, mathematics, and other school subjects. At the same time, business and political leaders are increasingly asking schools to develop skills such as problem solving, critical thinking, communication, collaboration, and self-management - often referred to as 21st century skills. Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century describes this important set of key skills that increase deeper learning, college and career readiness, student-centered learning, and higher order thinking. These labels include both cognitive and non-cognitive skills- such as critical thinking, problem solving, collaboration, effective communication, motivation, persistence, and learning to learn. 21st century skills also include creativity, innovation, and ethics that are important to later success and may be developed in formal or informal learning environments. This report also describes how these skills relate to each other and to more traditional academic skills and content in the key disciplines of reading, mathematics, and science. Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century summarizes the findings of the research that investigates the importance of such skills to success in education, work, and other areas of adult responsibility and that demonstrates the importance of developing these skills in K-16 education. In this report, features related to learning these skills are identified, which include teacher professional development, curriculum, assessment, after-school and out-of-school programs, and informal learning centers such as exhibits and museums.

*Guide for the Care and Use of Laboratory Animals* National Research Council,Division on Earth and Life Studies,Institute for Laboratory Animal Research,Committee for the Update of the Guide for the Care and Use of Laboratory Animals,2011-01-27 A respected resource for decades, the Guide for the Care and Use of Laboratory Animals has been updated by a committee of experts, taking into consideration input from the scientific and laboratory animal communities and the public at large. The Guide incorporates new scientific information on common laboratory animals, including aquatic species, and includes extensive references. It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry, and management. A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment, husbandry, behavioral and population management, and more.

Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing construction guidelines for functional areas; considerations such as drainage, vibration and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.
