Implant dentistry is now an integral part of everyday dental practice; however, most dentists receive their education in implant dentistry after graduation, with little emphasis on the identification of the complexity and risks of treatment. Since 2003 the International Team for Implantology (ITI) has recommended the SAC Classification to categorize implant treatment procedures into three levels of difficulty-straightforward, advanced, and complex. In 2007 the ITI organized a conference to standardize the application of the SAC classification, the conclusions of which are presented in this volume. This invaluable resource will help clinicians identify treatment complexity and risk before treating a patient, thereby improving the predictability and success of their outcomes.

Presents concepts essential to each section of the the ACT Assessment examination, providing test-taking strategies and a full-length practice test.

The X-Ray Technician Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: radiologic procedures and radiographic techniques; radiographic exposure; anatomy, physiology systems and pathology; radiation protection and radiobiology; electrical and radiation physics; and other related areas.

Paul C. H. Lim offers an insightful examination of the polemical debates about the doctrine of the Trinity in seventeenth-century England, showing that this philosophical and theological re-configuration significantly impacted the politics of religion in the early modern period. Through analysis of these heated polemics, Lim shows how Trinitarian God-Talk became untenable in many ecclesiastical and philosophical circles, which led to the emergence of Unitarianism. He also demonstrates that those who continued to embrace Trinitarian doctrine articulated their piety and theological perspectives in an increasingly secularized culture of discourse. Drawing on both unexplored manuscripts and well-known treatises of Continental and English provenance, he unearths the complex layers of the polemic: from biblical exegesis to reception history of patristic authorities, from popular religious radicalism during the Civil War to Puritan spirituality, from Continental Socinians to English anti-trinitarians who avowed their relative independent theological identity, from the notion of the Platonic captivity of primitive Christianity to that of Plato as "Moses Atticus." Among this book's surprising conclusions are the findings that Anti-Trinitarian sentiment arose from a Puritan ambience, in which Biblical literalism overcame rationalistic presuppositions, and that theology and philosophy were not as unconnected during this period as previously thought. Mystery Unveiled will fill a significant lacuna in early modern English intellectual history.

Pratiyogita Darpan (monthly magazine) is India's largest read General Knowledge and Current Affairs Magazine. Pratiyogita Darpan (English monthly magazine) is known for quality content on General

"George Black rediscovers the history and lore of one of the planet's most magnificent landscapes. Read *Empire of Shadows*, and you'll never think of our first—in many ways our greatest—national park in the same way again." —Hampton Sides, author of *Blood and Thunder* *Empire of Shadows* is the epic story of the conquest of Yellowstone, a landscape uninhabited, inaccessible and shrouded in myth in the aftermath of the Civil War. In a radical reinterpretation of the nineteenth century West, George Black casts Yellowstone's creation as the culmination of three interwoven strands of history - the passion for exploration, the violence of the Indian Wars and the "civilizing" of the frontier - and charts its course through the lives of those who sought to lay bare its mysteries: Lt. Gustavus Cheyney Doane, a gifted but tormented cavalryman known as "the man who invented Wonderland"; the ambitious former vigilante leader Nathaniel Langford; scientist Ferdinand Hayden, who brought photographer William Henry Jackson and painter Thomas Moran to Yellowstone; and Gen. Phil Sheridan, Civil War hero and architect of the Indian Wars, who finally succeeded in having the new National Park placed under the protection of the US Cavalry. *George Black's Empire of Shadows* is a groundbreaking historical account of the origins of America's majestic national landmark.

Nonlinear optics has been a rapidly growing field in recent decades. It is based on the study of effects and phenomena related to the interaction of intense coherent light radiation with matter. *Physics of Nonlinear Optics* describes various major nonlinear optical effects, including physical principles, experimental techniques, up-to-date research achievements, and current or potential applications. This book features clear conceptual descriptions, concise formulations, and emphasizes both theoretical and experimental aspects of nonlinear optics. The readability of this book is particularly enhanced by a series of color photographs showing the spectacular appearances of various nonlinear optical effects. Both authors of this book are outstanding research scientists renowned in their professional areas. Their major research achievements in nonlinear optics include the pioneering studies of two-wave-coupled refractive-index change, Raman-enhanced self-focusing, optical-frequency Pockels effect, stimulated Kerr scattering, optical phase-conjugation via backward stimulated emission, and two-photon-absorption based optical limiting, stabilization and reshaping.
