This book provides a deep insight to which extent further improvement should be envisaged to ensure and improve the sustainable development beyond 2030 (the Sustainable Development Goals is a set of 17 global goals with 169 associated targets which the state community adopted in 2015). As the world, its environment, economy and society is getting more and more technical advanced, it is of high interest to analyze how space and its various applications can support this development. Once the Goals of the "2030 Agenda for Sustainable Development" will be achieved new challenges are waiting. The analysis takes into account a proactive use of artificial intelligence for the development based on space infrastructure. Another important aspect revolves around the economic development which asks for further analysis of the cryptocurrencies relationship with space applications and how to use space based cryptocurrencies for development. Environment-wise the challenges for a sustainable development on Earth i.e. water supply, but also in outer space are requested ensuring a sustainable exploration and exploitation of space and its orbital resources. The book also highlights possible contributions of the post-2030 space industry to global economic development based on satellite technology and the enlargement of the scope of application of satellite data in administration and Justice to ensure development of effective, accountable and transparent institutions at all levels to promote growth, stability and security and peace on global level.

If you're preparing to take any exam from the National Examination Board in Occupational Safety and Health (NEBOSH), then you need to know what to expect. NEBOSH courses, which are offered by an awarding body based in the United Kingdom, offer individuals a comprehensive range of globally recognized qualifications designed to meet the health, safety, and environmental management needs of industries as well as national and local governmental organizations. This guide to passing the exams will help you: develop a study plan that is effective and efficient; use and apply command words in constructing answers, which could mean the difference between passing or failing; think about what you're being asked before writing down answers; and identify and avoid the pitfalls that lead to exam failure. NEBOSH qualifications attract approximately 50,000 candidates per year who take exams in more than 120 countries, but many of them fail. Improve your chances of lasting professional success with Secrets of Passing the NEBOSH Exams.

This book is directly aligned to the NEBOSH Certificate in Environmental Management, which is a qualification aimed primarily at those in business who influence the environmental performance of their organisation by the decisions that they make as managers or the actions that they take as operators. This book aims to provide an introduction to the main areas of concern and how the challenges can be addressed. This new edition takes account of recent changes in international guidance and legislation and the recent update of the International Standard in Environmental Management ISO 14001. The contents are important for businesses that wish to stay within the law and avoid adverse publicity. It explains how the concept of sustainability can be achieved in practice and what benefits – especially financial – that can accrue. Recent developments in the definitions of sustainability and the growing interest in the circular economy are introduced. It pays to be ahead of the game because decisions made now need to reflect an awareness of the coming pressures and there are opportunities available that can bring other benefits. This book is intended for candidates for the NEBOSH qualification, but it will also be useful to anyone who wishes to understand the problems and how they can be tackled within their own organisations, be they industry, public service, voluntary bodies, or even as individuals.

Ed Ferrett PhD, BSc (Hons Eng), CEng, MIMechE, MIET, CMIOSH, is a former Vice Chairman of NEBOSH (1999-2008) and a lecturer on NEBOSH courses at Cornwall Business School of Cornwall College. He is a Chartered Engineer and a health and safety consultant. By 2030 there will be about 70 million people in the United States who are older than 64. Approximately 26 percent of these will be racial and ethnic minorities. Overall, the older population will be more diverse and better educated than their earlier cohorts. The range of late-life outcomes is very dramatic with old age being a significantly different experience for financially secure and well-educated people than for poor and uneducated people. The early mission of behavioral science research focused on identifying problems of older adults, such as isolation, caregiving, and dementia. Today, the field of gerontology is more interdisciplinary. When I'm 64 examines how individual and social behavior play a role in understanding diverse outcomes in old age. It also explores the implications of an aging workforce on the economy. The book recommends that the National Institute on Aging focus its research support in social, personality, and life-span psychology in four areas: motivation and behavioral change; socioemotional influences on decision-making; the influence of social engagement on cognition; and the effects of stereotypes on self and others. When I'm 64 is a useful resource for policymakers, researchers and medical professionals.

Accidents and cases of occupational ill-health are commonly associated with aspects of human behaviour and the potential for human error. Human Factors and Behavioural Safety is not written for psychologists, but instead gives health and safety professionals and students a broad overview of human factors and those aspects of human behaviour which have a direct effect on health and safety performance within organisations. Particular attention is paid to: * the role of the organisation in promoting safe behaviour * the sensory and perceptual processes of people * behavioural factors, such as attitude, motivation and personality * the process of attitude change * theories of personal risk taking and accident * the importance of good communication, change management and stress management

This booklet provides advice and guidance to employers for assessment of their activities under the Control of Substances Hazardous to Health Regulations 1988 (COSHH). It replaces COSHH Assessments: A Step by Step Guide to Assessment and the Skills Needed for it published by HSE when COSHH was first introduced. This guidance takes note of the experience in assessment that has been gained since 1988 and the new requirement for regular review. The principles of assessment have not changed since COSHH first appeared, but this booklet illustrates them with extensive examples.
