Why is math so hard? And why, despite this difficulty, are some people so good at it? If there's some inborn capacity for mathematical thinking—which there must be, otherwise no one could do it—why can't we all do it well? Keith Devlin has answers to all these difficult questions, and in giving them shows us how mathematical ability evolved, why it's a part of language ability, and how we can make better use of this innate talent. He also offers a breathtakingly new theory of language development—that language evolved in two stages, and its main purpose was not communication—to show that the ability to think mathematically arose out of the same symbol-manipulating ability that was so crucial to the emergence of true language. Why, then, can't we do math as well as we can speak? The answer, says Devlin, is that we can and do—we just don't recognize when we're using mathematical reasoning.

This book explores the significance of silence within

and beyond pedagogical contexts. Silence is a complex and multidimensional phenomenon for everyday life: since schools mirror society, it is also significant in education. While silence can be experienced in a multitude of different ways, the author reflects on whether silence itself can bear a message: is there an aspect of dialogue in silence, or is it a language all of its own? This book examines a variety of silences essential for education, examining such topics as silence and aspects of power, silent students, and the relationship between listening and silence. Drawing on a range of empirical data, the author elucidates the significance of silence in pedagogical contexts.

Every human will have had thoughts or feeling of acting towards another person in a brutal manner and many times would have had thoughts or the feelings of hurting someone else without mercy. While many of us are going to restrain or hide this kind of tendency, there are those who are going to see these impulses and decide to act on them. The idea of dark psychology is to seek to understand these perceptions, feelings, thoughts, and even the subjective processing systems that tend to lead to the predatory behavior that is seen as unethical to what most of modern society is going to see as normal or good.
