English for Engineers & Technologists is in two volumes and has been written by teachers. It has been produced by the Department of Humanities and Social Sciences, Anna University and is a British Council-aided project. The writing of the book was supervised by three specialists from the Ealing College of Higher Education, London. The contents of the books are based on eight real-life topics which are interesting and relevant to engineering/technical students. Each unit is in turn divided into three sub-topics (eg. the Resources unit has water , gold and human resources). The exercises in each of the lesson units are aimed at developing in the students, skills in listening, discussion, reading, writing and presentation.

REA's Interactive Flashcard books represent a novel approach which combines the merits of flash cards with the ease of using a book. One side of each page includes questions to be answered, with space for writing in one's answers — a feature not usually found on flash cards. The flip side of the same page contains the correct answers, much as flash cards do. English Vocabulary (Set #1) is fully indexed making it easy to locate topics for study. Thanks to the book form, there is no need to look for and fish out appropriate questions from a box and put them back in the proper order, and there is no need to carry around a box of 1,000 flash cards. The book is easier to take along and carry.

With its innovative format, Debating New Approaches to History addresses issues currently at the top of the discipline's theoretical and methodological agenda. In its chapters, leading historians of both older and younger generations from across the Western world and beyond discuss and debate the main problems and challenges that historians are facing today. Each chapter is followed by a critical commentary

from another key scholar in the field and the author's response. The volume looks at topics such as the importance and consequences of the 'digital turn' in history (what will history writing be like in a digital age?), the challenge of posthumanist theory for history writing (how do we write the history of non-humans?) and the possibilities of moving beyond traditional sources in history and establishing a dialogue with genetics and neurosciences (what are the perspectives and limits of the so-called 'neurohistory'?). It also revisits older debates in history which remain crucial, such as what the gender approach can offer to historical research or how to write history on a global scale. *Debating New Approaches to History* does not just provide a useful overview of the new approaches to history it covers, but also offers insights into current historical debates and the process of historical method in the making. It demonstrates how the discipline of history has responded to challenges in society – such as digitalization, globalization and environmental concerns – as well as in humanities and social sciences, such as the 'material turn', 'visual turn' or 'affective turn'. This is a key volume for all students of historiography wanting to keep their finger on the pulse of contemporary thinking in historical research.

The fourth section provides an international bio-bibliographical lexicon of the most prominent medievalists in all disciplines. A comprehensive bibliography rounds off the compendium. The result is a reference work which exhaustively documents the current status of research in medieval studies and brings the disciplines and experts of the field together.

Since the dawn of science, ideas about the relation between science and religion have always depended on what else is going on in a society. During the twentieth century, daily life changed dramatically. Technology revolutionized transportation, agriculture, communications, and housework. People came to rely on scientific predictability in their technology. Many wondered whether God's supposed actions were consistent with scientific knowledge. The twenty-first century is bringing new scientific research capabilities. They are revealing that scientific results are not totally predictable after all. Certain types of interaction lead to outcomes that are unpredictable, in principle. These in turn may lead to a whole new range of potential interactions. They do not rule out the reality of a dynamic God who can act in the world without breaking the known principles of science. God may in fact work with "the way things really are." Human experience of God may accurately reflect this reality. *Interactive World, Interactive God* illustrates such new understandings in religion and science by describing recent developments in a wide range of sciences, and providing theological commentary. The book is written for intelligent readers who may not be specialized in science but who are looking for ways to understand divine action in today's world.

In this book I have tried to report the experimental research work conducted by me on the use of videos in developing oral expression of students. Language is a skill and it comprises of four skills eg. Listening, Speaking, Reading and Writing. Speaking is an expression skill and this could be developed when more and more listening is given to students. Whenever I used to see videos on YouTube I always thought about developing speaking skills with the help of videos, as this is the medium through which the student not only listens the language but also visualize the things. As a member of CTE College we have to conduct projects under the centrally sponsored scheme, to conduct this project I decided to work on the topic which I always used to think about. I took up the topic and conducted an experimental study to develop (oral expression) speaking skill of students through using videos. This book is a report of the work done by me. It is a very small effort in the field of education but I believe that this book will be very useful for the teachers who are concerned for developing language skills of students. Same type of study could be conducted to develop other skills also. Teacher educators and planners could also use the implications of research while planning curriculum/materials for teachers and students. The ensuing pages of the work are the cumulative consequence of extensive work. Hence, I wish to acknowledge and express my personal gratitude to them without whom this work could not have been reality. I am highly grateful to the Principal of School, Teachers who helped me in conducting classes and Students on whom the study was conducted. I express my gratitude and indebtedness to all those video makers, writers and researchers whose work I have used in this study. My hearty thanks to my family members, friends and well wishers due to their blessings I have been able to write this book. - Dr. AMI RATHORE

A critical approach to interactive fiction, as literature and game. Interactive fiction—the best-known form of which is the text game or text adventure—has not received as much critical attention as have such other forms of electronic literature as hypertext fiction and the conversational programs known as chatterbots. *Twisty Little Passages* (the title refers to a maze in *Adventure*, the first interactive fiction) is the first book-length consideration of this form, examining it from gaming and literary perspectives. Nick Montfort, an interactive fiction author himself, offers both aficionados and first-time users a way to approach interactive fiction that will lead to a more pleasurable and meaningful experience of it. *Twisty Little Passages* looks at interactive fiction beginning with its most important literary ancestor, the riddle. Montfort then discusses *Adventure* and its precursors (including the *I Ching* and *Dungeons and Dragons*), and follows this with an examination of mainframe text games developed in response, focusing on the most influential work of that era, *Zork*. He then considers the introduction of commercial interactive fiction for home computers, particularly that produced by Infocom. Commercial works inspired an independent reaction, and Montfort describes the emergence of independent creators and the development of an online interactive fiction community in the 1990s. Finally, he considers the influence of interactive fiction on other literary and gaming forms. With *Twisty Little Passages*, Nick Montfort places interactive fiction in its computational and literary contexts, opening up this still-developing form to new consideration.

In the late fifteenth century, the production of print editions of Claudius Ptolemy's second-century Geography sparked one of the most significant intellectual developments of the era—the production of mathematically-based, north-oriented maps. The production of world maps in England, however, was notably absent during this "Ptolemaic revival." As a result, the impact of Ptolemy's text on English geographical thought has been obscured and minimalized, with scholars speculating a possible English indifference to or isolation from European geographic developments. Tracing English geographical thought through the material culture of literary and popular texts, this study provides evidence for the reception and transmission of Ptolemaic-based geography in England during a critical period of geographic innovation and synthesis, one that laid the foundation for modern geographical representation. With evidence from prose

romance, book illustration, theatrical performance, cosmological ceilings, and almanacs, *Mirror of the World* proposes a new, interdisciplinary literary and cartographic history of the influence of Ptolemaic geography in England, one that reveals the lively integration of geographic concepts through narrative and non-cartographic visual forms.
