All institutions require a framework of governance, comprising a mission to be accomplished with clear rules and recognized conventions to guide its accomplishment. This book sets the governance of companies - corporate governance - in a wider framework so that it can be appreciated as part of a long tradition and of a system that affects our lives at all levels and in most places. Corporate governance is no longer optional for businessmen - it is vital - and the events which have led to this and the approaches taken by different countries are explained by Adrian Davies. He goes on to develop a working model for introducing a system of corporate governance, as well as detailing the process of installing and maintaining it. As the title suggests, A Strategic Approach to Corporate Governance explores the link between corporate governance and business strategy, and examines the role of the board of directors in providing leadership to both processes. Moving beyond the Cadbury, Greenbury and Hampel Codes, this book outlines a stakeholder approach to corporate governance which complements the financially-focused Codes. As Sir Adrian Cadbury says in his Foreword: 'Openness and accountability are the governance watchwords and ethical standards are the basis on which lasting governance systems are built. These are the lessons we have all learnt from the work which has been done worldwide on the governance of companies. Adrian Davies' book will, with advantage, help to spread corporate experience in this field to a wider range of organisations.'

Although federal and state regulations require employers to provide toilets, government agencies, incredibly, do not require employers to permit workers to use them. Marc Linder, a labor lawyer and political economist, and Ingrid Nygaard, a physician specializing in urogynecology, place this regulatory breakdown in the wider context of the history of labor-management struggles over rest periods. They emphasize the physiological consequences that workers suffer when they are not allowed to interrupt work to rest or urinate. Linder and Nygaard explain how protective rest period legislation has shrunk over time. Ironically, because most statutes singled out women for rest breaks, they were invalidated by Title VII's ban on sex discrimination. The authors explain other countries' regulations and conclude with a recommendation for legislation to mandate rest and bathroom breaks for all workers.

Schmidt and Bannon (1992) introduced the concept of common information space by contrasting it with technical conceptions of shared information: Cooperative work is not facilitated simply by the provisioning of a shared database, but rather requires the active construction by the participants of a common information space where the meanings of the shared objects are debated and resolved, at least locally and temporarily. (Schmidt and Bannon, p. 22) A CIS, then, encompasses not only the information but also the practices by which actors establish its meaning for their collective work. These negotiated understandings of the information are as important as the availability of the information itself: The actors must attempt to jointly construct a common information space which goes beyond their individual personal information spaces. . . . The common information space is negotiated and established by the actors involved. (Schmidt and Bannon, p. 28) This is not to suggest that actors' understandings of the information are identical; they are simply “common” enough to coordinate the work. People understand how the information is relevant for their own work. Therefore, individuals engaged in different activities will have different perspectives on the same information. The work of maintaining the common information space is the work that it takes to balance and accommodate these different perspectives. A “bug” report in software development is a simple example. Software developers and quality assurance personnel have access to the same bug report information. However, access to information is not sufficient to coordinate their work.
