Comparative Health Systems: Global Perspectives explores the health systems of 17 countries through comparative study. Using a consistent framework, the chapters offer an overview of each countrys history, geography, government, and economy, as well as a detailed analysis of the countrys healthcare system facilities, workforce, technology, cost, quality, and access. Current and emerging issues are also explored. The book concludes with a look at the changing U.S. healthcare system and the global challenges and opportunities for health. Testing and diagnosis of hepatitis B (HBV) and C (HCV) infection is the gateway for access to both prevention and treatment services, and is a crucial component of an effective response to the hepatitis epidemic. Early identification of persons with chronic HBV or HCV infection enables them to receive the necessary care and treatment to prevent or delay progression of liver disease. Testing also provides an opportunity to link people to interventions to reduce transmission, through counselling on risk behaviors and provision of prevention commodities (such as sterile needles and syringes) and hepatitis B vaccination. These are the first WHO guidelines on testing for chronic HBV and HCV infection and complement published guidance by WHO on the prevention, care and treatment of chronic hepatitis C and hepatitis B infection. These guidelines outline the public health approach to strengthening and expanding current testing practices for HBV and HCV, and are intended for use across age groups and populations.

The volume evaluates major developments in psychiatry in India from the 1950s, and highlights the areas where Indian psychiatry has contributed to the development of the subject worldwide. The chapters review international as well as Indian developments in psychiatry and its sub-specialities. A wide range of clinical, research and policy-related topics have been covered in the volume, which begins with an overview of the history of psychiatry in India, moving on to developments in various sub-specialities of psychiatry in the last 60 years or so. It then specifically discusses developments in psychology and psychodynamics, general adult and child psychiatry, substance use psychiatry, community psychiatry, liaison psychiatry, and other psychiatric sub-specialities. Developments in treatment, the status of training and service in psychiatry and legal issues related to the practice of psychiatry in India are also included. The contributors to this volume are nationally and internationally recognized experts in different areas of psychiatry. Most of them have had some association, or are currently associated, with the Department of Psychiatry at the Post Graduate Institute of Medical Education and Research, Chandigarh, India.

This is the first textbook of neonatology from the Indian subcontinent which has served as the most trusted resource to undergraduate and postgraduate medical students in pediatrics and obstetrics and gynecology for four decades. The book has been extensively revised and updated to incorporate recent advances in the art and understanding of perinatal disorders. All the chapters have been reorganized, revised and rewritten to incorporate additional evidence-based information to make it an up-to-date and comprehensive textbook of neonatology. The book presents an harmonious blend of latest physiological basis of neonatal disorders and the current state-of-the-art information pertaining to their management through a simplified algorithmic approach. Neonatology provides the greatest scope for health preventive and promotive strategies which have been covered in depth. A number of new photographs, images, flow diagrams and tables have been included to make it more reader-friendly and comprehensive. The initiatives taken by Government of India for improving newborn care in the community have been discussed in detail. The distinctive feature and hallmark of the book is the brevity, clarity and problem-oriented approach. The book shall serve as a useful and practical manual to the pediatric and obstetric resident staff and consultants working in the medical colleges, corporate hospitals and private maternity nursing homes.

The association between violence and mental illness is well studied, yet remains highly controversial. Currently, there does appear to be a trend of increasing violence in hospital settings, including both civilly and forensically committed populations. In fact, physical aggression is the primary reason for admission to many hospitals. Given that violence is now often both a reason for admission and a barrier to discharge, there is a pressing need for violence to be re-conceptualized as a primary medical condition, not as the by-product of one. Furthermore, treatment settings need to be enhanced to address the new types of violence exhibited in inpatient environments and this modification needs to be geared toward balancing safety with treatment. This book focuses on violence from assessment, through underlying neurobiology, to treatment and other recommendations for practice. This will be of interest to forensic psychiatrists, general adult psychiatrists, psychiatric residents, psychologists, psychiatric social workers and rehabilitation therapists.

This volume presents the latest trends in the management of pediatric cataract. It covers everything from the role of genetic and systemic work-up to the state of the art in surgery. Discussions include ocular modifications after surgery, the incidence and risk factors of post-surgery complications, and the management of complex cases. There is a chapter dedicated to post-aphakic glaucoma, a new insight to visual rehabilitation, and a summary of a recently published Delphi project. Pediatric ophthalmologists looking for the latest research in the management of cataract will find this publication to be invaluable reading. It will also be useful to general ophthalmologists, residents, and fellows, as well as to medical students and pediatricians who seek an update for daily clinical practice.

The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.

The book describes step-wise management of clinical emergencies seen every day in Intensive care units (ICUs). As a practical guide, clinicians can refer to it on a day-to-day basis during their work hours, or while in transit to update their knowledge. Targeted readers are intensivists, critical care specialists, and residents involved in the care of patients admitted in ICUs. This handbook covers an array of specialities such as cardiology, pulmonology, gastroenterology, neurology, nephrology, traumatology, and toxicology. This monograph provides point-of-care treatment guidance and will serve as a ready-reckoner for physicians to quickly learn the management steps in a methodical manner.

"The purpose of this document is to provide comprehensible, global, evidence-based guidelines to help formulate policies

and protocols for the treatment of malaria. Information is presented on the treatment of uncomplicated malaria, including disease in special groups (young children, pregnant women, people who are HIV positive, travellers from non-malaria endemic regions) and in complex emergency situations and severe malaria."--Publisher's description.

The Department of Child and Adolescent Health has developed guidelines on optimal feeding of low birth weight infants in low- and middle-income countries. These guidelines include recommendations on what to feed low-birth weight infants, when to start feeding, how to feed, how often and how much to feed. The guidelines were developed using the process described in the WHO Handbook for Development of Guidelines. Systematic reviews were conducted to answer 18 priority questions identified by the guidelines development group. The population of interest is low-birth weight infants, and the critical outcomes include mortality, severe morbidity, growth and development. The implementation of these guidelines in low- and middle-income countries is expected to improve care and survival of low birth weight infants.
