This book will help you to develop some of the essential assessment skills that are needed to support patients with long-term conditions in secondary and primary care settings. You may be at the beginning of your career, or you may be an experienced practitioner who is moving into long-term conditions care. At whatever level you may be, this book will give you some guidance on how to use appropriate assessment tools and to reflect on your experience from practice. Supporting patients with long-term conditions is not solely the domain of nursing. This book is intended to be suitable for a range of practitioners who are interested in developing their assessment skills further. However some examples have been given from a nursing perspective. The exercises throughout the book have been designed to encourage you to reflect on your practice and draw from the wide range of evidence that is available to support your development. You can work through them at your own pace and return to chapters that you need to learn more about.

This volume provides a comprehensive exploration of stroke, from basic mechanisms of disease to enhanced diagnostic and therapeutic capabilities. The ongoing efforts within the neurological community are also highlighted, bringing a better understanding of the pathophysiological basis of this disorder. Clinicians will find invaluable information that can be used to enhance the lives of an aging global population. Covered topics include the functional anatomy of the brain itself, as well as advancements in the understanding of the biochemical background of strokes. Related fields and their dramatic impact on stroke research are also included, with findings in the fields of epidemiology, genetics, neuroimaging, and interventional radiology thoroughly explored. In addition, great attention is paid to therapeutic avenues, including investigation, prevention, and patient management. \* A comprehensive resource for information on diagnostic advancements, prevention, and treatment of strokes \* A clinical perspective on the ways related fields such as epidemiology, genetics, and neuroimaging, amongst others, are impacting new research in this disorder \* A foundation that will enable researchers to pursue new clinical investigations

Designed for use by busy professionals who need quick answers, this revised and updated second edition of The Stroke Book is a concise and practical reference for anyone involved in managing critically ill cerebrovascular patients. • Covers a wide range of common conditions such as ischemic and hemorrhagic strokes, subarachnoid hemorrhages and intracranial aneurysms • Provides focused protocols for assessing and treating stroke patients in the emergency room, intensive care unit or general hospital setting • A new chapter summarizes key clinical trials for stroke therapies • User-friendly format • Packed with algorithms, tables and summary boxes for immediate access to key information • A color plate section illustrates key pathology and diagnostic imaging Written by experienced contributors from leading stroke centers, this is an essential companion for navigating stroke-related clinical situations successfully and making informed decisions about treatment.

Neuroprotection is becoming an increasingly recognized and important part of critical care and perioperative medicine. As human beings survive increasingly severe life-threatening injuries and complex surgical interventions, it has become clear that neurologic injury and dysfunction is a primary driver of long-term outcome and disability. Neuroprotection is currently under-recognized as the primary objective in promoting recovery from life-threatening injuries, illnesses, and procedures. To address this knowledge gap, Neuroprotection in Critical Care and Perioperative Medicine provides a concise review of the current state of the art of clinical care and research. Within the context of critical care, the specific topics covered will include the primary forms of brain injury on which neuroprotection research and intervention has traditionally focused, such as traumatic brain injury, cardiac arrest, acute ischemic stroke, and intracranial hemorrhage, as well as CNS injuries related to sepsis and acute respiratory distress syndrome, mechanical circulatory support, and premature birth. Within the context of perioperative care, the specific topics covered will include anesthetic and perioperative strategies to reduce brain injury from cardiac surgery, aortic surgery and endovascular repair, carotid endarterectomy, vascular and endovascular neurosurgery, and other major surgical procedures.

Written by a Clinical Nurse Specialist for Clinical Nurse Specialists, this text explores the expanding roles and responsibilities of the CNS—from core competencies and theoretical foundations for practice to caring for the hospitalized adult to shaping the healthcare system through the CNS's spheres of influence.

The thoroughly updated second edition of this key textbook provides an authoritative discussion of cardiovascular disease for the practicing primary care clinician. It examines a variety of disease states with emphasis on risk factors, risk estimation, and established cardiac disease. The book also explores the co-morbid conditions that surround cardiovascular disease. It includes key points, algorithms, case studies, recommendations on evidence-based practice, and summary boxes. A key resource for the busy practitioner, the Second Edition of Comprehensive Cardiovascular Medicine in the Primary Care Setting is designed to give residents, fellows, and primary care physicians the skills to confidently perform assessments, initiate and maintain efficacious therapy, and know when a referral to a cardiologist is advisable.

Synthesizing the vast body of literature available in neurology into one accessible, clinically relevant volume, Neurology Evidence: The Practice-Changing Studies is an invaluable resource for students, residents, and fellows, as well as neurologists at all levels of experience. Featuring the top 100 papers that have had the most significant impact on

changing clinical practice, this unique title analyzes the strengths and weaknesses of both seminal and less-noticed studies. Readable commentary is provided for each study by both a senior and junior neurologist in each subspecialty. Learn facility-based coding by actually working with codes. ICD-10-CM/PCS Coding: Theory and Practice provides an in-depth understanding of in-patient diagnosis and procedure coding to those who are just learning to code, as well as to experienced professionals who need to solidify and expand their knowledge. Featuring basic coding principles, clear examples, and challenging exercises, this text helps explain why coding is necessary for reimbursement, the basics of the health record, and rules, guidelines, and functions of ICD-10-CM/PCS coding. UPDATED ICD-10 codes and coding guidelines revisions ensure students have the most up-to-date information available. 30-day access to TruCode® encoder on the Evolve companion website provides students realistic practice with using an encoder. UPDATED codes for Pancreatitis, Diabetic Retinopathy, Fractures, GIST Tumors, Hypertension and Myocardial Infarctions. ICD-10-CM and ICD-10-PCS Official Guidelines for Coding and Reporting provide fast, easy access instruction on proper application of codes. Coverage of both common and complex procedures prepares students for inpatient procedural coding using ICD-10-PCS. Numerous and varied examples and exercises within each chapter break chapters into manageable segments and help students gauge learning while reinforcing important concepts. Illustrations and examples of key diseases help in understanding how commonly encountered conditions relate to ICD-10-CM coding. Strong coverage of medical records provides a context for coding and familiarizes students with documents they will encounter on the job. Illustrated, full-color design emphasizes important content such as anatomy and physiology and visually reinforces key concepts.

In this special issue of Diagnostics, expert contributors have produced up-to-date research studies and reviews on various topics related to the diagnosis of dementia and cognitive impairment. The methods of the assessments discussed extend from simple neurological signs, which may be elicited in the clinical encounter, through cognitive screening instruments, to sophisticated analyses of neuroimaging and cerebrospinal fluid biomarkers of disease. It is hoped that these various methods may facilitate earlier diagnosis of dementia and its subtypes, and provide differential diagnosis of depression and functional cognitive disorders, as a prelude to meaningful interventions.

Over the past three decades, carotid artery stenting has evolved to become a promising and viable alternative to carotid endarterectomy, especially for patients deemed to have high surgical risks. In Carotid Artery Stenting: The Basics, Jacqueline Saw and a panel of international experts on carotid artery stenting discuss in depth the details of all contemporary aspects of carotid stenting, while reviewing supporting studies, guidelines, technical perspectives, and peri-procedural management. This textbook serves as a learning resource on the multifaceted management of patients with carotid artery stenosis, with the key focus on extracranial carotid artery stenting. Additional sections detail the specifics of setting up and maintaining a laboratory and discuss the preparation of the carotid artery stenting procedure from both the patient and operator's perspective. Authoritative and highly practical, Carotid Artery Stenting: The Basics is an accessible guide and valuable resource for today's cardiologists, radiologists, and vascular surgeons.

This first volume describes the epidemiology of cancer, development of drugs, chemotherapy and surgical therapy, and the side effects of therapies and differential diagnoses. It shows that the diagnosis of side effects needs to be supported by scales and scores to grade their extent, and presents a number of tools and methods that can be used to assess the focal and generalized effects of chemotherapy on the central and peripheral nervous system. Cancer is often associated with pain and is a frequent issue in patients with chemotherapy-induced neuropathy. The participation of patients in studies and their influence on study design is important. Patient support groups have been formed for several forms of cancer, and are helpful in dispensing advice. The treatment of cancer patients must include activities of daily living and quality of life. Often, palliative care and end-of-life care are part of the disease trajectory. As this book shows, patients do not have equal access to cancer treatment around the world, and often basic issues as diagnosis, treatment are lacking.

Practical and concise, Stroke Rehabilitation provides everyday clinical guidance on current methods, techniques, evidence, and controversies in this important area. This focused resource by Drs. Richard Wilson and Preeti Raghavan consolidates today's available information in an easy-to-navigate format for today's practicing and trainee physiatrists, as well as other members of the rehabilitation team.

This monograph translates neuroscientific research to illuminate ongoing and future practices for the rehabilitation of patients with neurologic diseases. The author dissects fundamental concepts, current practices, and clinical trials to define what clinicians and researchers need to consider as they pursue best practices and areas ripe for exploration. Remarkable studies from functional anatomy, neural repair, physiologic imaging of the brain, and brain-machine interfaces reveal how the structure and function of the nervous system may respond to therapeutic manipulations for walking, grasping, and cognition. These concepts are brought forward into treating the medical complications and the impairments and disabilities of patients across neurologic diseases.

Delivers expert guidance for the common conditions seen in adult-gerontology acute care practice The first book of its kind, this evidence-based resource provides nurse practitioners, physician assistants, and other advanced practice providers with the clinical knowledge they need to effectively practice adult-gerontology acute care.
