This book develops a politico-ethical response to climate change that accounts for the novelty and uncertainty that it entails. This volume explores the ethical dimensions of climate change and posits that one must view it as a social construction intimately tied to political issues in order to understand and overcome this environmental challenge. To show how this ethos builds upon the need for new forms of responsiveness, Anfinson analyzes it in terms of four features: commitment, worldly sensitivity, political disposition, and practice. Each of these features is developed by putting four thinkers – Kierkegaard, Nietzsche, Schmitt, and Foucault respectively – in conversation with the literature on climate change. In doing so, this book shows how social habits and norms can be transformed through subjective thought and behavior in the context of a global environmental crisis. Presenting a multidisciplinary engagement with the politics, philosophy, and science of climate change, this book will be of great interest to students and scholars of climate change, environmental politics, environmental philosophy and environmental humanities.

Voyage of the Dead is the first book of the Sovereign Spirit Saga detailing the adventures of several groups of survivors of the Zombie Apocalypse. Most of them are aboard a ship that is well equipped to survive the end of civilization, while others struggle to survive in a world suddenly overrun by undead cannibals. This is a science fiction adventure set within a horror genre, full of blood, guts, violence and the human emotions that fuel our survival instincts. While some scenes include graphic violence, it is intended to be more exciting than disgusting and more about using your brains than eating them. Enjoy the ride! Book length is over 100,000 words. This is the first book of a series, followed by "Flotilla of the Dead" and "Deluge of the Dead" in the Sovereign Spirit Saga. "Without a doubt one of the better Zombie books." Anthony Wessel for The Kindle Book Review "This is one of those books that starts with a bang and I read waiting for the pace to slacken, except it doesn't. Too often, books of this kind start out with an action scene, and then we get chapters of backfill and descriptions of the soap opera-like travails of our characters. While Forsyth indeed fills in the characterizations, the key quality of this book is that most valuable in any kind of thriller--PACING." John S. Walsh "What a truly entertaining read. I started reading on Friday morning and couldn't put the book down until I finished. Not just your everyday, run-of-the-mill, ho-hum story of the apocalypse." -- 5 stars from Paul Jones, author of "Extinction Point" and "Towards Yesterday." "Gorey, pulpy, zombie fun! Basically it's the A-Team meets Battlestar Galactica meets The Walking Dead. If this were a show I'd watch it." -- 5 stars from Nathan Yocum, author of "The Zona." "The Walking Dead meets Battlestar Gallactica! This novel has all the ingredients for an epic series of books and would be great for television too. It's like a Star Trek of the Zombie Apocalypse." Tom McWilliams

This book examines the common metaphor that equates computing and writing, tracing it from the naming of devices ("notebook" computers) through the design of user interfaces (the "desktop") to how we describe the work of programmers ("writing" code). Computing as Writing ponders both the implications and contradictions of the metaphor. During the past decade, analysis of digital media honed its focus on particular hardware and software platforms. Daniel Punday argues that scholars should, instead, embrace both the power and the fuzziness of the writing metaphor as it relates to computing—which isn't simply a set of techniques or a collection of technologies but also an idea that resonates throughout contemporary culture. He addresses a wide array of subjects, including film representations of computing (Desk Set, The Social Network), Neal Stephenson's famous open source manifesto, J. K. Rowling's legal battle with a fan site, the sorting of digital libraries, subscription services like Netflix, and the Apple versus Google debate over openness in computing. Punday shows how contemporary authors are caught between traditional notions of writerly authority and computing's emphasis on doing things with writing. What does it mean to be a writer today? Is writing code for an app equivalent to writing a novel? Should we change how we teach writing? Punday's answers to these questions and others are original and refreshing, and push the study of digital media in productive new directions.

### The Line Between

Booked for Christmas, a novella from debut author Lily Menon, is sure to get readers in the holiday spirit! Novelist Sophia Hart (real name: Sophie Bartholomew-Kaur-Hughes, but try fitting that on a book cover) absolutely hates her loudest critic—Evan Wolfe, evil mastermind behind the Lone Wolfe book review column. They've never met, but Wolfe's favorite pastime seems to be dumping on Sophie's unapologetically happy, magical romances. Sophie, not one to be left behind, gets her revenge in her own ways (never annoy a writer in search of a villain). When Sophie decides to throw a holiday party at her cabin, Wolfe is the last person on her mind. But the universe has a twisted sense of humor. Not only does Wolfe show up as someone's plus one, but a massive snowstorm blows in, stranding them both alone together in Sophie's cabin. Over the next few days, Sophie begins to realize that Wolfe isn't as odiously cynical a man as she'd originally thought. In fact, he's kind of...sweet. And impossibly hot. But still, Sophie's been hurt before and she has so much to lose. What she needs is one sure sign that she and Wolfe are meant to be together. Will Sophie and Wolfe get their Christmas miracle?

Forecasting the Environmental Fate and Effects of Chemicals is the first book to address specifically the issue of forecasting in environmental toxicology and chemistry from a methodological, regulatory and practical perspective. It is becoming increasingly important for environmental toxicologists and chemists to be able to forecast the fate and effects of chemicals by using existing information to predict the future. Providing a unique and timely opportunity for active researchers and students to obtain in a single volume the 'state of the art' in this expanding field, this text discusses how forecasts can be made by: \* using ecotoxicological endpoints at different levels of biological organisation \* measuring and modelling chemical fate in biotic and abiotic environments \* adopting difference quantitative frameworks Written by an international team of scientists, this text will be essential reading for postgraduate and advance undergraduate students studying ecotoxicology, toxicology, chemistry and environmental statistics as well as industrial and academic research scientists in environmental toxicology, environmental chemistry and those involved in risk management.
