"Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory." Kathleen Dracup, RN, DNSc Dean and Professor, School of Nursing University of California San Francisco Afaf Meleis, the dean of the University of Pennsylvania School of Nursing, presents for the first time in a single volume her original "transitions theory" that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy, old age, and many more. A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, *Transitions Theory* covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models

Knowledge Translation in Nursing and Healthcare provides authoritative guidance on the implementation of evidence-informed practice, covering issue identification and clarification, solution building and implementation, evaluation, and sustainment. Integrating theory, empirical research, and experiential knowledge, this hands-on resource assists nurses and healthcare practitioners in collecting quality evidence, transforming it into a useable, customized recommendation, and then applying best practice in various point-of-care settings. Written by highly experienced implementation researchers working with practitioners, the book demonstrates how the synthesis and translation of evidence supports

improvement of existing care and service delivery models, and produces increased benefit for both patients and health services. Examples drawn from the authors' first-hand experience—such as pressure injury prevention in acute care, transition of care for people with heart failure, and community leg ulcer care—illustrate the use of best practice in addressing care and quality issues. This important reference and guide: Outlines a planning framework that activates research and evidence in practice settings, moving knowledge into action and sustaining the use of best practice Introduces the framework that enables effective evidence-informed methodology and decision-making Features numerous illustrative field examples of both successful and unsuccessful implementations in a variety of practical situations Offers perspectives on best practice implementation from experienced practitioners and researchers Knowledge Translation in Nursing and Healthcare is a must-have for those wanting to implement, evaluate, and sustain best practice in the delivery of evidence-informed healthcare to patients, families, and communities.

Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report *The Future of Nursing: Leading Change, Advancing Health*, which made a series of recommendations pertaining to roles for nurses in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP Future of Nursing: Campaign for Action and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.

Social and behavioral science has for decades studied and recognized leadership as a social exchange between leaders and followers. But leadership is rather complex, and as such, it tends to lead to an increased interest within and across different disciplines. This book is an attempt to provide theoretical and empirical framework to better understand leadership challenges in various contexts. The authors cover an array of themes that span from an individual level to an organizational and societal level. In this volume, two sections are presented. The first section based on individual level focuses on different leadership styles and abilities, and the other section provides theories to understand leadership in public administration, in industrial settings and in nonprofit organizations.

This addition to the Fast Facts series provides a succinct guide for nurses in adult-health clinical settings and fills the need for an easy-to-use clinical reference that delivers a quick-access reference on ways to incorporate wellness into their work, helping to improve patient outcomes, and throughout their daily lives, helping to reduce personal and professional stress and improve their overall wellness. There currently is no clinical reference book that nurses can use for health promotion in general and health promotion for wellness in particular. Having such a reference is especially pertinent to nurses who learned about health promotion in academic nursing programs, but did not learn about health promotion in the broader context of promoting wellness. Since Florence Nightingale, nurses have considered health promotion interventions ñ particularly patient education -- as an essential component of nursing care. Historically, these interventions traditionally focused on physical health concerns, such as nutrition, exercise, and fresh air, and more recently, on immunizations, and screening for disease (e.g., cancer, diabetes, hypertension, and cardiovascular disease).

Because health promotion has expanded to include wellness, nurses now address issues related to broader aspects, such as stress reduction, body-mind connectedness, and self-responsibility. At the same time that wellness has become an important focus of care, health care providers increasingly are emphasizing cost effectiveness and use of advanced technology. As a result of these concurrent trends, nurses experience high levels of job-related stress and have less time to promote patient wellness as an integral part of their care, even though they recognize its importance. In addition, nurses increasingly recognize that job-related pressures negatively affect them personally and they are looking for ways to incorporate wellness in their work and personal experiences. Fast Facts for Health Promotion for Wellness (FF HP) fills the need for an easy-to-use clinical reference that delivers a quick-access reference on ways to incorporate wellness into their work and throughout their daily lives. This book:

- Helps nurses understand wellness in the context of health promotion
- Clearly defines wellness as it applies to the practice of nursing
- Describes evidence-based techniques that nurses can readily incorporate into their usual care to promote wellness for their patients
- Provides easy-to-use assessment tools for identifying wellness-related needs of patients
- Provides easy-to-use tools for teaching patients about interventions to promote wellness
- Provides evidence-based information about complementary and alternative practices that nurses often address in patient care situations
- Provides information about reliable resources for patient teaching and additional information about topics
- Discusses ways in which nurses can achieve self wellness

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In

this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing. Prepare for the real world of family nursing care! issues you'll likely face in today's health care environment.

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.
