**Introduction**The Nutrition Care Process is a well-known framework used in dietetic practice, which focuses on systematic problem-solving to assist with the development of evidenced-based nutrition interventions.<sup>1</sup> Despite many benefits associated with this framework, there are numerous barriers to the successful implementation of nutrition care process terminology (NCPT).<sup>2</sup>  
**Objectives**The primary research question was to determine the main barriers and facilitators for implementing NCPT in dietetic practice. The secondary objective was to provide recommendations to improve support for NCPT implementation and evaluation.  
**Methods**A literature search was conducted from November to December 2018 using the following databases: PubMed, Scopus, and OVID Medline. The inclusion criteria was research focusing on the implementation and/or evaluation of NCPT. Exclusion criteria included non-English articles and papers published before 2005, as this was the year that the Academy of Nutrition and Dietetics invited Canada to adopt the NCPT framework.<sup>1</sup> Studies were organized based on inclusion of NCPT implementation, evaluation, or both. Key barriers and facilitators to NCPT implementation and future recommendations were summarized.  
**Results**<sup>u2022</sup> 12 studies met the inclusion criteria: U.S.A (n=6), Australia (n=3), Sweden (n=2), Switzerland (n=1)  
**u2022** Main facilitators were project champions with change management experience and group-based learning.  
**u2022** Major barriers included a lack of support, time, and knowledge related to NCPT implementation.  
**u2022** Recommendations for improvements were ongoing training and education for registered dietitians (RDs) to improve the quality of their documentation, and additional research to evaluate the impact of NCPT on nutrition care outcomes.  
**Conclusions**Continual education is required to support RDs with effectively incorporating NCPT into their practice. Moreover, further research is warranted to justify the validity and reliability of NCPT application, particularly in the Canadian healthcare context.  
**Significance to the Field of Dietetics**The present study may help enhance current NCPT implementation strategies, and serve as a guide for subsequent research to evaluate the impact of NCPT on patient care.

The Nordic countries have collaborated in setting guidelines for dietary composition and recommended intakes of nutrients for several decades through the joint publication of the Nordic Nutrition Recommendations (NNR). This 5th edition, the NNR 2012, gives Dietary Reference Values (DRVs) for nutrients, and compared with earlier editions more emphasis has been put on evaluating the scientific evidence for the role of food and food patterns contributing to the prevention of the major diet-related chronic diseases. Recommendations on physical activity are included and interaction with physical activity has been taken into account for the individual nutrient recommendations wherever appropriate. A chapter on sustainable food consumption has been added. A Nordic perspective has been accounted for in setting the reference values. The NNR 2012 has used an evidence-based and transparent approach in assessing associations between nutrients and foods and certain health outcomes. Systematic reviews form the basis for the recommendations of several nutrients and topics, while a less stringent update has been done for others. The systematic reviews and individual chapters have been peer reviewed and the systematic reviews are published in the Food & Nutrition Research journal. The draft chapters were subject to an open public consultation.

Recommendations have been changed only when sufficient scientific evidence has evolved since the 4th edition. The primary aim of the NNR 2012 is to present the scientific background of the recommendations and their application. A secondary aim is for the NNR 2012 to function as a basis for the national recommendations that are adopted by the individual
