Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

We've all been there. Seduced by the sleek designs and smart capabilities of the newest gadgets, we end up stumped by their complicated set-up instructions and exasperating error messages. In this fascinating history, Joseph J. Corn maps two centuries of consumer frustration and struggle with personal technologies. Aggravation with the new machines people adopt and live with is as old as the industrial revolution. Clocks, sewing machines, cameras, lawn mowers, bicycles, electric lights, cars, and computers: all can empower and exhilarate, but they can also exact a form of servitude. Adopters puzzle over which type and model to buy and then how to operate the device, diagnose its troubles, and meet its insatiable appetite for accessories, replacement parts, or upgrades. It intrigues Corn that we put up with the frustrations our technology thrusts upon us, battling with the unfamiliar and climbing the steep learning curves. It is this ongoing struggle, more than the uses to which we ultimately put our machines, that animates this quizzical study. Having extensively researched owner's manuals, computer user-group newsletters, and how-to literature, Corn brings a fresh, consumer-oriented approach to the history of technology. *User Unfriendly* will be valuable to historians of technology, students of American culture, and anyone interested in our modern dependency on machines and gadgets.

The *Unorthodox Engineers* are a misfit bunch of engineers, commanded by maverick engineer Fritz van Noon and including, amongst others, a convicted bank robber as quartermaster (on the entirely-sound grounds that he was likely to be the most capable person for the job). They solve problems of alien technology and weird planets in the future. The *Unorthodox Engineers* contains: *The Railways Up on Cannis* (1959) *The Subways of Tazoo* (1964) *The Pen and the Dark* (1966) *Getaway from Getawehi* (1969) *The Black Hole of Negrav* (1975)

The OM-D E-M1 camera has been hailed as "The King of Micro Four Thirds" format for good reason! The engineers gave this camera one of the most customizable and nuanced user interfaces ever. While a good move, even experienced users will sometimes need help getting their arms around all of the different permutations of features or groups of features spread across different menus. In this detailed and easy-to-read reference, professional photographer Tony Phillips simplifies the complexity and provides the shortest learning curve for this infinitely-configurable camera. Get the most out of your investment from the most highly-regarded source of books for digital cameras!

The must-have resource drawing together all aspects of hospital care of the horse and specialist techniques in equine medicine.
