From K-12 to corporate training settings—the Third Edition of Patricia Smith and Tillman Ragan's thorough, research-based text equips you with the solid foundation you need to design instruction and environments that really facilitate learning. Now updated to reflect the latest thinking in the field, this new edition offers not only extensive procedural assistance but also emphasizes the basic principles upon which most of the models and procedures in the instructional design field are built. The text presents a comprehensive treatment of the instructional design process, including analysis, strategy design, assessment, and evaluation.

This is an up-to-date revision of the classic text first published in 1983. It includes a historical perspective on the growth of evaluation theory and practice and two comparative analyses of the various alternative perspectives on evaluation. It also includes articles representing the major schools of thought about evaluation written by the leaders who have developed these schools and models. The final section describes and discusses the Standards for Program Evaluation and the reformation of program evaluation.

Before today's teachers are ready to instruct the intellectual leaders of tomorrow, they must first be trained themselves. Information and communication technology can greatly increase the effectiveness of this training and also aid teachers as they seek to bring the latest technological advancements into their own classrooms. The Handbook of Research on Enhancing Teacher Education with Advanced Instructional Technologies explains the need to bring technology to the forefront of teacher training. With an emphasis on how information and communication technology can provide richer learning outcomes, this book is an essential reference source for researchers, academics, professionals, students, and technology developers in various disciplines.

Perhaps not since Ralph Tyler's (1949) Basic Principles of Curriculum and Instruction has a book communicated the field as completely as Understanding Curriculum. From historical discourses to breaking developments in feminist, poststructuralist, and racial theory, including chapters on political theory, phenomenology, aesthetics, theology, international developments, and a lengthy chapter on institutional concerns, the American curriculum field is here. It will be an indispensable textbook for undergraduate and graduate courses alike.

This book explores the rules and patterns that govern complex systems that, when properly understood and applied, result in more effective leadership than what is offered from traditional leadership models.

High Impact Instruction is a response to the pressing need among school leaders for research-validated, high-leverage instructional practices that have a significant, positive impact on the way teachers teach and students learn. Author Jim Knight provides a simple but powerful framework and set of tools for improving classroom management, content planning, instruction, and assessment. In addition, the book addresses the most effective forms of professional learning that can be used to ensure that teachers learn the Big Four teaching practices: Instructional Coaching, Partnership Learning, and Intensive Learning Teams. The New Imperatives of Educational Change is a clarion call to move beyond the standardized testing and marketplace competition that have become pervasive in school systems to focus instead on creating the conditions that will encourage all students to become critical and independent thinkers. Dennis Shirley presents five new imperatives to guide educators and policymakers towards a re-thinking of what it means to teach effectively and to learn in depth. The evidentiary imperative requires educators to attain a better grasp of what data actually reveal about international trends in student learning. The interpretive imperative encourages mindful deliberation before acting on evidence in order to promote the integrity of a school community. The professional imperative describes new international research findings on promising pedagogies and curricula that propel learning in new directions. The global imperative argues that we all must look beyond our national boundaries to improve the flourishing of all young people, wherever they may be found. Finally, the existential imperative reminds us that students look to their teachers as role models who can dignify learning with meaning and embellish life with joy. Visionary in its scope and practical in its details, The New Imperatives of Educational Change is an indispensable road map for all teachers, principals, and system leaders.

Curriculum and Imagination describes an alternative 'process' model for designing developing, implementing and evaluating curriculum, suggesting that curriculum may be designed by specifying an educational process which contains key principles of procedure. This comprehensive and authoritative book: offers a practical and theoretical plan for curriculum-making without objectives shows that a curriculum can be best planned and developed at school level by teachers adopting an action research role complements the spirit and reality of much of the teaching profession today, embracing the fact that there is a degree of intuition and critical judgement in the work of educators presents empirical evidence on teachers' human values. Curriculum and Imagination provides a rational and logical alternative for all educators who plan curriculum but do not wish to be held captive by a mechanistic 'ends-means' notion of educational planning. Anyone studying or teaching curriculum studies, or involved in education or educational planning, will find this important new book fascinating reading.

Creative Dimensions of Teaching and Learning in the 21st Century appeals to educators across disciplines teaching at every age level who are challenged daily to develop creative practices that promote innovation, critical thinking and problem solving. "What year are you preparing your students for? 1973? 1995? Can you honestly say that your school's curriculum and the program you use are preparing your students for 2015 or 2020? Are you even preparing them for today?" With those provocative questions, author and educator Heidi Hayes Jacobs launches a powerful case for overhauling, updating, and injecting life into the K-12 curriculum. Sharing her expertise as a world-renowned curriculum designer and calling upon the collective wisdom of 10 education thought leaders, Jacobs provides insight and inspiration in the following key areas: \* Content and assessment--How to identify what to keep, what to cut, and what to create, and where portfolios and other new kinds of assessment fit into the picture. \* Program structures--How to improve our use of time and space and groupings of students and staff. \* Technology--How it's transforming teaching, and how to take advantage of students' natural facility with technology. \* Media literacy--The essential issues to address, and the best resources for helping students become informed users of multiple forms of media. \* Globalization--What steps to take to help students gain a global perspective. \* Sustainability--How to instill enduring values and beliefs that will lead to healthier local, national, and global communities. \* Habits of mind--The thinking habits that students, teachers, and administrators need to develop and practice to succeed in school, work, and life. The answers to these questions and many more make Curriculum 21 the ideal guide for transforming our schools into what they must become: learning organizations that match the times in which we live.

"Key Concepts for Understanding Curriculum", originally published in 1992, includes 21 key topics in the field and is divided into six sections, including: curriculum planning and development; curriculum management; teaching perspectives; collaborative involvement in curriculum; and curriculum ideology.

philosophy and ideology on educational theory and practice through the theories of Essentialism, Perennialism, Social Reconstruction, and Critical Theory. 'This book will be of interest to educational practitioners, and many other professionals concerned with the education and development of the young' - ESCalate 'A very well-respected book [and a] Curriculum classic...[which offers] balance to current official publications...One of its strengths is the coherent argument that runs throughout. It is very much a product of the wide knowledge and experience of the author.' - Jenny Houssart, Senior Lecturer, Department of Learning, Curriculum & Communication, Institute of Education, University of London, UK Praise for previous editions: 'I use this book as an essential course text for a module on curriculum theory. It is an excellent text for the whole course' 'Vic Kelly's writing is always concise and informative, but also at times challenging' 'A most comprehensive text that takes the reader beyond content/balance issues values, beliefs and assumptions on the curriculum' This is the sixth edition of a book that has been regularly revised and updated since it was first published in the mid-1970s. A V Kelly's now classic work focuses on the philosophical and political dimensions of curriculum, and especially on the implications for schools and societies of various forms of curriculum. The book outlines what form a curriculum should take if it is concerned to promote a genuine form of education for a genuinely democratic society. Kelly summarises and explains the main aspects of curriculum theory, and shows how these can and should be translated into practice, in order to create an educational and democratic curriculum for all schools at all levels. The book also seeks to show that the politicization of the school curriculum has led to the establishment of policies and practices which demonstrate a failure to understand these principles of curriculum theory and practice. As a result, policies and practices have been implemented which fall short of being adequate. In view of the rapid pace of educational change imposed by various governments over the last 35 years, including New Labour, this book is more relevant than ever.

In this eclectic, balanced approach to the major emergent trends in the field, a diversity of leaders in the field provides a variety of opinions and thoughts on curriculum issues. An issues-oriented collection of 36 articles by the major thinkers in curriculum study, "Contemporary Issues in Curriculum, 6/e" looks at issues that affect successful implementation, planning, and evaluation of curriculum at all levels of learning. Organized into six Parts--Curriculum and Philosophy, Curriculum and Teaching, Curriculum and Learning, Curriculum and Instruction, Curriculum and Supervision, and Curriculum and Policy--the readings reflect both traditionally held assumptions as well as those more controversial in nature. Students and practitioners have the opportunity to turn to a single source to investigate the breadth of issues that affect curriculum, examine and debate the issues, formulate their

own ideas, and help shape the future direction of the field. Some of the issues NEW to this edition include: What it means to say a school is doing well. The Common Core Curriculum. The influence of changing demographics in the United States. Claims that other countries do a better job of educating their students for the future. Ways of helping students learn to their highest potential. The usefulness of the traditional high school diploma. Research-based practices for inducting new teachers. Practices for getting teachers and staff to perform at their highest levels. Provocative questions about societal changes.

In 1949, a small book had a big impact on education. In just over one hundred pages, Ralph W. Tyler presented the concept that curriculum should be dynamic, a program under constant evaluation and revision. Curriculum had always been thought of as a static, set program, and in an era preoccupied with student testing, he offered the innovative idea that teachers and administrators should spend as much time evaluating their plans as they do assessing their students. Since then, *Basic Principles of Curriculum and Instruction* has been a standard reference for anyone working with curriculum development. Although not a strict how-to guide, the book shows how educators can critically approach curriculum planning, studying progress and retooling when needed. Its four sections focus on setting objectives, selecting learning experiences, organizing instruction, and evaluating progress. Readers will come away with a firm understanding of how to formulate educational objectives and how to analyze and adjust their plans so that students meet the objectives. Tyler also explains that curriculum planning is a continuous, cyclical process, an instrument of education that needs to be fine-tuned. This emphasis on thoughtful evaluation has kept *Basic Principles of Curriculum and Instruction* a relevant, trusted companion for over sixty years. And with school districts across the nation working feverishly to align their curriculum with Common Core standards, Tyler's straightforward recommendations are sound and effective tools for educators working to create a curriculum that integrates national objectives with their students' needs.

The ideal resource for researchers, theoreticians, and practitioners of curriculum; a ready reference for teachers, supervisors, and administrators who participate in curriculum making; and a widely popular text for courses in curriculum planning, development, implementation, and evaluation, this book presents a comprehensive, thoroughly documented, balanced overview of the foundations, principles, and issues of curriculum today. The information presented encourages readers to consider choices and then formulate their own views on curriculum.

This book has been written to provide a current, practical, Australian-based approach to designing and developing curriculum. The demands of schools and educational systems today are such that teachers with practical curriculum skills are highly valued and this book provides a vital source for teachers who wish to build their skills in the field of curriculum design and development. The book addresses the needs of curriculum developers by examining the nature of the curriculum process and how it can be applied in schools. A particular strength is the way in which the chapters are structured around a model of curriculum development. As the model unfolds the reader is familiarised with the various elements of curriculum including situational analysis, intent, content, learning activities and evaluation. Teachers will appreciate the value of understanding these elements and in so doing will acquire valuable skills of curriculum design and development. A feature of this book is that it addresses the issues of curriculum implementation and curriculum change. To devise a curriculum document in these times is tough enough. Those who wish to see their curricula succeed must be involved with implementing that curriculum and the curriculum change that results. This important new book is particularly appropriate to classroom teachers, system developers and student teachers studying curriculum.
