This book is exceptional in providing detailed state of the art guidance on all aspects of transfer of the latissimus dorsi tendon for indications including irreparable posterosuperior rotator cuff tears, irreparable subscapularis tears, and shoulder replacement. In addition to clear, well-illustrated descriptions of arthroscopically assisted surgical technique, readers will find helpful information on biomechanics, surgical indications, post-transfer rehabilitation, and complications and their management. Outcomes from individual studies and meta-analyses are evaluated, and a feature of special interest is the presentation of experiences and results in a series of more than 430 patients using the surgical technique first described by Enrico Gervasi more than 10 years ago. This technique involves modifications in both preparation of the footprint for the latissimus dorsi tendon and the biomechanical features of the tendon transfer and is very different from the procedure proposed by Christian Gerber. The book will be of high value for all orthopedic surgeons who perform this complex shoulder surgery, as well as for residents and fellows-in-training.

A complete evidence-based textbook and reference for physical therapy students and practitioners Dutton's Orthopaedic Examination, Evaluation, and Intervention provides you with a systematic, logical approach to the evaluation and intervention of the orthopedic patient. Comprehensive and up-to-date, Dutton's strikes the perfect balance in its coverage of examination and treatment. For any intervention to be successful, an accurate diagnosis must be followed by a carefully planned and specific rehabilitation program to both the affected area and its related structure. This approach must take into consideration the structure involved and the stage of healing. Dutton's Orthopaedic Examination, Evaluation, and Intervention emphasizes the appropriate use of manual techniques and therapeutic exercise based on these considerations. The correct applications of electrotherapeutic and thermal modalities are outlined throughout as adjuncts to the rehabilitative process. The content reflects the consistent, unified voice of a single author – a prominent practicing therapist who delivers step-by-step guidance on the examination of each joint and region. This in-depth coverage leads you logically through systems review and differential diagnosis, aided by decision-making algorithms.
