Can contemporary democratic governments tackle climate crisis? Some argue that democracy has to be a central part of a strategy to deal with climate change. Others argue that experience shows it not to be up to the challenge in the time frame available-

that it will require a stronger hand, even a form of eco-authoritarianism. A question that does not lend itself to an easy assessment, this volume seeks to out and assess the competing answers. While the book supports the case for environmental democracy, it argues that establishing and sustaining democratic practices will be difficult during the global climate turmoil ahead, especially in the face of state of emergencies. This inquiry undertakes a search for an appropriate political-ecological strategy for preserving a measure of democratic governance during hard times. Without ignoring the global dimensions of the crisis, the analysis finds an alternative path in the theory and practices participatory environmental governance embodied in a growing relocalization movement, and global eco-localism generally. Although such movements largely operate under the radar of the social sciences, the media and the political realm generally, these vibrant socio-ecological movements not only speak to the crisis ahead, but are already well established and thriving on the ground, including ecovillages, eco-communes, eco-neighborhoods, and local transition initiatives. With the help of these ideas and projects, the task is to influence the discourse of environmental political theory in ways that can be of assistance to those who will face climate crisis in its full magnitude.

"Race Brokers examines how housing market professionals-including housing developers, real estate agents, mortgage lenders, and appraisers-construct 21st century urban housing markets in ways that contribute to or undermine racial

segregation. Drawing on extensive ethnographic and interview data collected in Houston, Texas, *Race Brokers* shows that housing market professionals play a key role in connecting people-or refusing to connect people-to housing resources and opportunities. They make these brokering decisions through reference to racist or anti-racist ideas. Typically, housing market professionals draw from racist ideas that rank-order people and neighborhoods according to their perceived economic and cultural housing market value, entwining racism with their housing market activities and interactions. Racialized housing market routines encourage this entwinement by naturalizing racism as a professional tool. *Race Brokers* tracks how professionals broker racism across the housing exchange process-from the home's construction, to real estate brokerage, mortgage lending, home appraisals, and the home sale closing. In doing so, it shows that professionals make housing exchange a racialized process that contributes to neighbourhood inequality and racial segregation. However, in contrast to the racialized status-quo, a small number of housing market professionals draw on anti-racist ideas and strategies to extend equal opportunities to individuals and neighborhoods, de-naturalizing housing market racism. *Race Brokers* highlights the imperative to interrupt the racism that pervades housing market professionals' work, dismantle the racialized routines that underwrite such racism, and cultivate a truly fair housing market"--

Information Technology Law is the ideal companion for a course of study on IT law and

the ways in which it is evolving in response to rapid technological and social change. The third edition of this ground-breaking textbook develops its unique examination of the legal processes and their relationship to the modern "information society". Charting the development of the rapid digitization of society and its impact on established legal principles, Murray examines the challenges faced with enthusiasm and clarity. Following a clearly-defined part structure, the text begins by defining the information society and discussing how it may be regulated, before moving on to explore issues of internet governance, privacy and surveillance, intellectual property and rights, and commerce within the digital sphere. Comprehensive and engaging, Information Technology Law takes an original and thought-provoking approach to examining this fast-moving area of law in context.

Online Resource Centre: The third edition is supported by a range of online resources, including:

- * Additional chapters on the Digital Sphere and Virtual Environments
- * Audio podcasts suitable for revision
- * Updates to the law post-publication
- * A flashcard glossary of key terms and concepts
- * Outline answers to end of chapter questions
- * A link to the author's blog, The IT Lawyer
- * Web links

Information technology affects all aspects of modern life. From the information shared on social media such as Facebook, Twitter, and Instagram to online shopping and mobile devices, it is rare that a person is not touched by some form of IT every day. Information Technology Law examines the legal dimensions of these everyday interactions with technology and the impact on privacy and data protection, as well as

Violence against women has been a focus of transnational advocacy networks since the early 1980s, and the United Nations has, in intervening years, passed a series of resolutions to condemn, prevent, investigate, and punish this violence. Member states have committed to implementing this agenda. Yet, despite this

buy-in at the global level, implementation at the domestic level remains uneven. Scholars have found that states are more likely to translate global standards into national laws when pressured by women's movements and international organizations. However, a dearth of research on the implementation at the national and street-levels of these international women's rights norms hampers an understanding of what happens after states pass laws. In Africa, where most states have not prioritized the prevention of violence against women, and the majority of perpetrators act with impunity, there is a major implementation gap. This gap is acute in some post-conflict countries on the continent. Thus, despite the presence of laws on various forms of violence against women in most African countries, justice remains inaccessible to most victims. In *Global Norms and Local Action*, Peace A. Medie studies the domestic implementation of international norms by examining how and why two post-conflict states in Africa, Liberia and Côte d'Ivoire, have differed in their responses to rape and domestic violence. Specifically, she looks at the roles of the United Nations and women's movements in the establishment of specialized criminal justice sector agencies, and the referral of cases for prosecution. She argues that variation in implementation in Liberia and Côte d'Ivoire can be explained by the levels of international and domestic pressures that states face and by the favorability of

domestic political and institutional conditions. Medie's study is based on interviews with over 300 policymakers, bureaucrats, staff at the UN and NGOs, police officers, and survivors of domestic violence and rape an unprecedented depth of research into women's rights and gender violence norm implementation in post-conflict countries. Furthermore, through her interviews with survivors of violence, Medie explains not only how states implement anti-rape and anti-domestic violence norms, but also how women experience and are affected by these norms. She draws on this research to recommend that states adopt a holistic approach to addressing violence against women.

The variety, pace, and power of technological innovations that have emerged in the 21st Century have been breathtaking. These technological developments, which include advances in networked information and communications, biotechnology, neurotechnology, nanotechnology, robotics, and environmental engineering technology, have raised a number of vital and complex questions. Although these technologies have the potential to generate positive transformation and help address 'grand societal challenges', the novelty associated with technological innovation has also been accompanied by anxieties about their risks and destabilizing effects. Is there a potential harm to human health or the environment? What are the ethical implications? Do this innovations erode of antagonize values such as human dignity, privacy,

democracy, or other norms underpinning existing bodies of law and regulation? These technological developments have therefore spawned a nascent but growing body of 'law and technology' scholarship, broadly concerned with exploring the legal, social and ethical dimensions of technological innovation. This handbook collates the many and varied strands of this scholarship, focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors, through which leading scholars in the field interrogate the interfaces between law, emerging technology, and regulation. Structured in five parts, the handbook (I) establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance; (II) explores the relationship between technology development by focusing on core concepts and values which technological developments implicate; (III) studies the challenges for law in responding to the emergence of new technologies, examining how legal norms, doctrine and institutions have been shaped, challenged and destabilized by technology, and even how technologies have been shaped by legal regimes; (IV) provides a critical exploration of the implications of technological innovation, examining the ways in which technological innovation has generated challenges for regulators in the governance of technological development, and the implications of employing new

technologies as an instrument of regulatory governance; (V) explores various interfaces between law, regulatory governance, and new technologies across a range of key social domains.

The problem of tyranny preoccupied Plato, and its discussion both begins and ends his famous Republic. Though philosophers have mined the Republic for millennia, Cinzia Arruzza is the first to devote a full book to the study of tyranny and of the tyrant's soul in Plato's Republic. In *A Wolf in the City*, Arruzza argues that Plato's critique of tyranny intervenes in an ancient debate concerning the sources of the crisis of Athenian democracy and the relation between political leaders and demos in the last decades of the fifth century BCE. Arruzza shows that Plato's critique of tyranny should not be taken as veiled criticism of the Syracusan tyrannical regime, but rather of Athenian democracy. In parsing Plato's discussion of the soul of the tyrant, Arruzza will also offer new and innovative insights into his moral psychology, addressing much-debated problems such as the nature of eros and of the spirited part of the soul, the unity or disunity of the soul, and the relation between the non-rational parts of the soul and reason.
