Antimicrobial resistance (AMR) challenges the treatment of clinical infections. Despite the decline in infectious diseases mortality rates, infections are more difficult to eliminate or contain in the host, resulting in poorer outcomes to treatment, longer hospital inpatient stays, and increased mortality. Written by international experts in the field and supported by the review of the available evidence, including example case studies, Antimicrobial Stewardship provides a practical how-to guide on this growing area. Divided into three sections, the first sets the scene, looking at the key problems of antimicrobial resistance. Section two examines and identifies the key components of an antimicrobial stewardship program. Finally, the book explores specialist areas of antimicrobial stewardship ranging from antimicrobial pharmacokinetics and dynamics, to near patient testing, and infection biomarkers. Antimicrobial Stewardship will be a valuable and practical resource for infection trainees, as well as specialists from the medical, pharmacy, and nursing professions.

A majority of people living in rural areas and urban slums worldwide have minimal access to healthcare. Without information about what to give a child with stomach flu, how to relieve the pain of a broken bone, and how to work against increased substance abuse in a village, the whole community suffers. Children, adolescents, adults, and older people are all affected by the lack of what many of us view as basic healthcare, such as vaccination, pain killers, and contraceptives. To improve living conditions and life expectancy, the people in urban slums and rural areas need access to a trained health care worker, and a functioning clinic. Setting up Community Health and Development Programmes in Low and Middle Income Settings illustrates how to start, develop, and maintain a health care programme in poor areas across the world. The focus is on the community, and how people can work together to improve health through sanitation, storage of food, fresh water, and more. Currently, there is a lack of 17 million trained health care workers worldwide. Bridging the gap between medical professionals and people in low income areas, the aim of this book is for a member of the community to receive training and become the health care worker in their village. They will then in turn spread information and set up groups working to improve health. The book also explains in detail how communities can work alongside experts to ensure that practices and processes work effectively to bring the greatest impact. Copiously illustrated and written in easy-to-read English, this practical guide is designed to be extremely user friendly. Ideal for academics, students, programme managers, and health care practitioners in low and middle income settings worldwide, it is an evidence based source full of examples from the field. Setting up Community Health and Development Programmes in Low and Middle Income Settings shows how a community can both identify and solve its own problems, and in that way own its future. This is an open access title available under the terms of a CC BY-NC 4.0 International licence.
