Why do people study religion? How have they studied it in the past? How do we study religion today? Is the academic study of religion the same as religious education? These and many other questions are addressed in this engaging introduction to the discipline of religious studies, written by two experienced university teachers. The authors have crafted this book to familiarize novice students with key concepts and terminology in the study of religion. More advanced students will find a varied array of theoretical perspectives and methodological approaches to the field. Topics include: definitions of religion perspectives in the study and teaching of religion how religion began to be studied: traditional perspectives – philosophical and theological how people experience religion: perspectives in the study of religious consciousness and perception – phenomenological and psychological studying religion within communities: Social and cultural perspectives – anthropological, sociological, political and economic judging religion: critical perspectives – feminist approaches, the interaction of popular literature and religion contextual perspectives – historical and comparative. The book encourages students to think critically about the theories and methods presented. Students will find arguments for the strengths and limitations of these approaches, understand connections among religious studies and other intellectual movements, and develop their own ideas of how they might want to go about the study of religion. Summary boxes, a timeline, a glossary and other pedagogic aids help students grasp key concepts, along with a companion website at www.sastor.com.

This book presents a translation, with commentary, of a major Roman source on the end of the reign of Alexander the Great. Book 10 of Curtius' Histories covers the reign of terror and mutiny that followed upon Alexander's return from India; and offers the fullest account of the power struggle that began in Babylon immediately after his death. The Introduction establishes a profile of Curtius Rufus (quite probably a Roman Senator of the first century AD), and his agenda as a historian. John Yardley's translation and the commentary are designed for the reader without Latin. The Commentary provides detailed analysis of the historical events of the crucial period 325-3 BC covered by Curtius, and also tries to get behind the surface level of meaning to show how Curtius intended his history to be a text for his time. Curtius' text is also examined as a literary achievement in its own right.

This first report deals with some of the major development issues confronting the developing countries and explores the relationship of the major trends in the international economy to them. It is designed to help clarify some of the linkages between the international economy and domestic strategies in the developing countries against the background of growing interdependence and increasing complexity in the world economy. It assesses the prospects for progress in accelerating growth and alleviating poverty, and identifies some of the major policy issues which will affect these prospects.

A self-contained and practical book providing step-by-step guidance to the design and construction of cleanrooms, appropriate testing methodologies, and operation for the minimization of

contamination... This second edition has been comprehensively revised and includes extensive updates to the two chapters that contain information on cleanroom standards and guidelines. The chapter on risk management has been extensively revised, especially the section on risk assessment. Other new subjects that have been added to the various chapters are those on clean-build, determination of air supply volumes for non-unidirectional airflow cleanrooms, RABS (Restricted Access Barrier Systems), contamination recovery test methods, entry of large items into a cleanroom, glove allergy problems, and how to develop a cleanroom cleaning programme. Used for in-house training and a textbook in colleges, this volume is for cleanroom personnel at all levels. It provides novices with an introduction to the state-of-the-art technology and professionals with an accessible reference to the current practices. It is particularly useful in the semiconductor, pharmaceutical, biotechnology and life sciences industries. William Whyte is an international authority in cleanrooms, with over 45 years experience in research, teaching and consulting in the electronic, healthcare and pharmaceutical industries. He is a member of British and International standards committees writing the International Cleanroom standards, and has received numerous awards for his work in Cleanroom Technology. A comment on the first edition: "...extremely useful and helpful...very well-written, highly organized, easy to understand and follow..." (Environmental Geology, 2003)

This highly regarded textbook provides a unique clinical reference for all pediatric surgeons. This new edition analyzes and updates what is known about long-term outcomes in pediatric surgery and urology. The editors have succeeded in bringing together critical reviews written by leading international experts in pediatric surgery and urology. The second edition of this successful and popular textbook has been completely revised and updated with new chapters on urolithiasis, small bowel transplantation, pancreatitis, and breast disorders and a completely new section on trauma. An understanding of long-term outcomes is critical if individual surgeons and health policy makers are to achieve optimum results in current clinical practice. This is an essential reference source for pediatric surgeons and urologists, pediatricians, adult specialists, and others dealing with the sequelae of childhood surgical problems.

The Language of the Birds is a masterpiece of Eastern Turkish literature (now Uzbek), and was written by one of Central Asia's most prominent poets, Alisher Nava'i, shortly before his death in 1501. The story begins with the birds of the world realizing they are far from their king and so they begin their arduous journey with the assistance of the wise bird Hoopoe as their guide. Hoopoe listens to their complaints and excuses along the way and encourages them to seek true life even though the journey is sometimes painful. This epic poem in prose form contains many anecdotes and stories from the oral history of the Silk Road and Islam. Through this story, people are exhorted to rise above any excuse they might have in their spiritual pilgrimage. Alisher Nava'i (1441-1501) is renowned in Central Asia for his numerous writings and lasting influence in Uzbekistan as well as the contemporary Central Asian republics. In modern Uzbekistan, Nava'i is revered above all other poets and his presence is still found – streets, museums, and even a province and city are named after him. His proverbs are found throughout Central Asia and he is considered the father of the Uzbek language. His words for peace and against oppression are as timely today as they were 5 centuries ago. Nava'i lived in Herat, Afghanistan. His writings, endowments, and his life example have had lasting influence in Central Asia. In The Language of the Birds, we are introduced to what Nava'i thought is important in life. It is a world of love that goes beyond the rational and is ready to endure anything for the beloved. This book is for anyone who values great historical literature, as well as those needing inspiration in his or her own pilgrimage in life.

The questions which this volume seeks to address include: what is translation competence? How can it be built and developed? How can the product of the performance be used to measure levels of competence? These questions are addressed with specific reference to the training situation. They are arranged in three sections, the first focusing on the identification of subcompetences.

In this book a new theory on instruction is presented - a reflective theory of school didactics - uniquely incorporating continental German and Nordic research traditions in the theory of didactics (Didaktik), together with Anglo-American research on teaching (instructional research) and cognitivist theory. School didactics is defined as a field of research within general education. This field is limited to research and theory aiming at understanding the pedagogical practice which takes place in institutionalized educational settings guided by a curriculum collectively agreed upon. As the theory is designed to be valid for institutionalized education framed by a politically accepted curriculum, it is a culturally seen regional theory of education, not a universal one. According to this school theory the fundamental features of an institutionalized pedagogical process consist in the intentional, interactional, teaching-studying-learning process that is culturally and historically developed and situated. However, the present model does not explicitly formulate goals nor the means of educational practice. Rather, the model emphasizes the teacher and student as reflective and intentional subjects where the teacher is acting as the representative of the collective but also as the learners' advocate. Because of this the theory presented is not a normative or prescriptive theory, instead it is a reflective theory.

Bringing his perennially popular course to the page, Yale University Professor Paul H. Fry offers in this welcome book a guided tour of the main trends in twentieth-century literary theory. At the core of the book's discussion is a series of underlying questions: What is literature, how is it produced, how can it be understood, and what is its purpose? Fry engages with the major themes and strands in twentieth-century literary theory, among them the hermeneutic circle, New Criticism, structuralism, linguistics and literature, Freud and fiction, Jacques Lacan's theories, the postmodern psyche, the political unconscious, New Historicism, the classical feminist tradition, African American criticism, queer theory, and gender performativity. By incorporating philosophical and social perspectives to connect these many trends, the author offers readers a coherent overall context for a deeper and richer reading of literature.

Originally published by Houghton Mifflin in 1972, this introductory text deals with human language and its relationship to other areas of human culture and behavior. Discussions include such diverse topics as the classification of languages, sound and grammar changes, reconstruction, and social and psychological factors involved in the history and development of language. Since independence in 1991, Kazakhstan, the second largest of the former 15 Soviet Republics, stretching across 3500 kilometers, has been descending into a social and economic abyss. The decline is more tragic because it was the most Westernized of the Soviet Central Asian republics. In Journey into Kazakhstan, the author travels to different regions - the Aral Sea, the Caspian region, the vast central steppelands, the Semipalatinsk Nuclear Polygon, Karaganda, built by Stalin labour camp prisoners, ravaged industrial towns like Shymkent and Kentau, and

collapsing state farms. Through on-the-spot reporting the reader will witness how an entire society is descending rapidly back to the pre-industrial era on account of misgovernance and malfeasance and the collapse of education and social welfare.

The aim of the series is to present new and important developments in pure and applied mathematics. Well established in the community over two decades, it offers a large library of mathematics including several important classics. The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question. In addition, they convey their relationships to other parts of mathematics. The series is addressed to advanced readers wishing to thoroughly study the topic. Editorial Board Lev Birbrair, Universidade Federal do Ceará, Fortaleza, Brasil Victor P. Drawing on US and international sources Ray traces the development of international rules governing the use of official export credits and makes specific proposals for reducing their cost through enhanced international cooperation. Ray also includes basic documents dealing with export credits and aid-credit competition; these will provide an invaluable reference library for those concerned with export credit policy.

Written in a concise, easy-to understand manner, INTRODUCTION TO GEOTECHNICAL ENGINEERING, 2e, presents intensive research and observation in the field and lab that have improved the science of foundation design. Now providing both U.S. and SI units, this non-calculus-based text is designed for courses in civil engineering technology programs where soil mechanics and foundation engineering are combined into one course. It is also a useful reference tool for civil engineering practitioners. O'zbekiston tarixiXVI-XIX asrning birinchi yarmi : Umumiy o'rta ta'lim maktablarining 8-sinfi uchun darslikFundamentals of Real Estate AppraisalThe Dragonlover's Guide to PernDel Rey Books An Introduction to Programming by the Inventor of C++ Preparation for Programming in the Real World The book assumes that you aim eventually to write non-trivial programs, whether for work in software development or in some other technical field. Focus on Fundamental Concepts and Techniques The book explains fundamental concepts and techniques in greater depth than traditional introductions. This approach will give you a solid foundation for writing useful, correct, maintainable, and efficient code. Programming with Today's C++ (C++11 and C++14) The book is an introduction to programming in general, including object-oriented programming and generic programming. It is also a solid introduction to the C++ programming language, one of the most widely used languages for real-world software. The book presents modern C++ programming techniques from the start, introducing the C++ standard library and C++11 and C++14 features to simplify programming tasks. For Beginners--And Anyone Who Wants to Learn Something New The book is primarily designed for people who have never programmed before, and it has been tested with many thousands of first-year university students. It has also been extensively used for self-study. Also, practitioners and advanced students have gained new insight and guidance by seeing how a master approaches the elements of his art. Provides a Broad View The first half of the book covers a wide range of essential concepts, design and programming techniques, language features, and libraries. Those will enable you to write programs involving input, output, computation, and simple graphics. The second half explores more specialized topics (such as text processing, testing, and the C programming language) and provides abundant reference material. Source code and support supplements are available from the author's website.

If IT companies seek to differentiate themselves from the competition, they must turn to consultative selling. Consultative selling is analyzing the needs and challenges of your customers and selling unique services that enable your customers to reduce costs, increase profits, and improve overall business performance. The Art of Consultative Selling in IT provides a practical framework for becoming a successful consultative seller and shows how to use the blue ocean strategy to identify opportunities in areas where there is no competition. The first section discusses the advantages of consultative selling and explores the concepts of blue oceans. In blue oceans, demand is created rather than fought over. Competition is irrelevant because the rules of the game are waiting to be established. The author explains how you can use consultative selling techniques to create your own blue oceans of unknown market space, where opportunities for growth are both rapid and profitable. In the second section, the author defines the consultative selling framework (CSF). This framework is based on proven processes, best practices, and real-time case studies to make consultative selling a reality. It provides clear guidelines for understanding your customer's current landscape and challenges, owning its priorities, and helping it to achieve its short-term and long-term goals. The author explains how to use CSF to generate innovative ideas and present them to your customer through profit improvement or efficiency improvement proposals. The book concludes with examples of several innovative business improvement ideas that you can present to your customers, including Agile project management, master data management (MDM), application portfolio rationalization, and business process management (BPM). The author discusses the benefits of each methodology and lists the trigger points to think about when deciding whether the methodology can add value to a particular customer.
