As captivating as the most thrilling novel, Burmese Looking Glass tells the story of tribal peoples who, though ravaged by malaria and weakened by poverty, are unforgettably brave. Author Edith Mirante first crossed illegally from Thailand into Burma in 1983. There she discovered the hidden conflict that has despoiled the country since the close of World War II. She met commandos and refugees and learned firsthand the machinations of Golden Triangle narcotics trafficking. Mirante was the first Westerner to march with the rebels from the fabled Three Pagodas Pass to the Andaman Sea; she taught karate to women soldiers, was ritually tattooed by a Shan

"... twelve essays in which this visionary literary critic speaks specifically to the eternal act of creation, addressing the incessant need for literary revisioning." —Studies in Religion
These essays, four of which are published here for the first time, reveal one of the most extraordinary minds of our time engaging a wide range of literary, cultural, and religious issues. Frye gave these addresses during the last decade of his life, and they reveal this distinguished critic speaking with wit and wisdom about the permanent forms of human civilization and engaging in the eternal act of creation.

As in many other fields, biomedical engineers benefit from the use of computational intelligence (CI) tools to solve complex and non-linear problems. The benefits could be even greater if there were scientific literature that specifically focused on the biomedical applications of computational intelligence techniques. The first comprehensive field-specific reference, *Computational Intelligence in Biomedical Engineering* provides a unique look at how techniques in CI can offer solutions in modelling, relationship pattern recognition, clustering, and other problems particular to the field. The authors begin with an overview of signal processing and machine learning approaches and continue on to introduce specific applications, which illustrate CI's importance in medical diagnosis and healthcare. They provide an extensive review of signal processing techniques commonly employed in the

analysis of biomedical signals and in the improvement of signal to noise ratio. The text covers recent CI techniques for post processing ECG signals in the diagnosis of cardiovascular disease and as well as various studies with a particular focus on CI's potential as a tool for gait diagnostics. In addition to its detailed accounts of the most recent research, Computational Intelligence in Biomedical Engineering provides useful applications and information on the benefits of applying computation intelligence techniques to improve medical diagnostics.

Selected by Choice magazine as an Outstanding Academic Title Land ownership was not the sole reason for conflict between Indians and English, Jenny Pulsipher writes in *Subjects unto the Same King*, a book that cogently redefines the relationship between Indians and colonists in seventeenth-century New England. Rather, the story is much more complicated—and much more interesting. It is a tale of two divided cultures, but also of a host of individuals, groups, colonies, and nations, all of whom used the struggle between and within Indian and English communities to promote their own authority. As power within New England shifted, Indians appealed outside the region—to other Indian nations, competing European colonies, and the English crown itself—for aid in resisting the overbearing authority of such rapidly expanding

societies as the Massachusetts Bay Colony. Thus Indians were at the center—and not always on the losing end—of a contest for authority that spanned the Atlantic world. Beginning soon after the English settled in Plymouth, the power struggle would eventually spawn a devastating conflict—King Philip's War—and draw the intervention of the crown, resulting in a dramatic loss of authority for both Indians and colonists by century's end. Through exhaustive research, Jenny Hale Pulsipher has rewritten the accepted history of the Indian-English relationship in colonial New England, revealing it to be much more complex and nuanced than previously supposed.

Architectural facades now have the potential to be literally kinetic, through automated sunscreens and a range of animated surfaces. This book explores the aesthetic potential of these new types of moving facades. Critique of theory and practice in architecture is combined here with ideas from kinetic

art of the 1960's. From this background the basic principles of kinetics are defined and are used to generate experimental computer animations. By classifying the animations, a theory of kinetic form called 'state change' is developed. This design research provides a unique and timely resource for those interested in the capacity of kinetics to enliven the public face of architecture. First year undergraduate calculus courses. The difference between Early Transcendentals (ET) and Late Transcendentals (LT) is the placement of logs and exponentials (aka transcendentals) in the table of contents and therefore where those topics are covered in the course - either early or late. The seventh edition continues to evolve to fulfil the needs of a changing market by providing flexible solutions to teaching and learning needs of all kinds. The new edition retains the strengths of earlier editions: e.g., Anton's trademark clarity of exposition; sound mathematics; excellent exercises and examples; and appropriate level, while incorporating new ideas that have withstood the objective scrutiny of many skilled and thoughtful instructors, and their students. For the first time, the seventh edition is available in both Late Transcendentals and Early Transcendentals versions.

For fans of *The Orchardist* and *The Cove* and from the author of bestselling *In the Fall*, an epic historical novel that fearlessly addresses the largest questions of love, justice, and how to live. "Wonderfully entertaining, deeply moving, beautifully written . . . In my estimation, Jeffrey Lent is our most American writer since Mark Twain and one of the two of three best novelists of our time."--Howard Frank Mosher

At the close of the Civil War, weary veteran Malcolm Hopeton returns to his home in western New York State to find his wife and hired man missing and his farm in disrepair. A double murder ensues, the repercussions of which ripple through a community with spiritual roots in the Second Great Awakening. Hopeton has gone from the horrors of war to those far worse, and arrayed around him are a host of other people struggling to make sense of his crime. Among them is Enoch Stone, the lawyer for the community, whose spiritual dedication is subverted by his lust for power; August Swartout, whose wife has left earthly time and whose eye is set on eternity; and a boy who must straddle two worlds as he finds his own truth and strength. Always there is love and the memory of love--as haunting as the American Eden that Jeffrey Lent has so exquisitely rendered in this unforgettable novel. *A Slant of Light* is a novel of earthly pleasure and deep love, of loss and war, of prophets and followers, of theft and

revenge, in an American moment where a seemingly golden age has been shattered. This is Jeffrey Lent on his home ground and at the height of his powers. This is a unique collection of new and recently-published articles which debate the merits of virtue-theoretic approaches to the core epistemological issues of knowledge and justified belief. The readings all contribute to our understanding of the relative importance, for a theory of justified belief, of the reliability of our cognitive faculties and of the individuals responsibility in gathering and weighing evidence. Highlights of the readings include direct exchanges between leading exponents of this approach and their critics.

This book challenges a contemporary postfeminist sensibility grounded not only in assumptions that gender and sexual equality has been achieved in many Western contexts, but that feminism has gone 'too far' with women and girls now overtaking men and boys - positioned as the new victims of gender transformations. The book is the first to outline and critique how educational discourses have directly fed into postfeminist anxieties, exploring three postfeminist panics over girls and girlhood that circulate widely in the international media and popular culture. First it explores how a masculinity crisis over failing boys in school has spawned a backlash discourse about overly successful girls; second it looks at how widespread anxieties over girls becoming excessively mean and/or violent have positioned female aggression as pathological; third it examines how incessant concerns over controlling risky female sexuality underpin recent sexualisation of girls' moral panics. The book outlines how

these postfeminist panics over girlhood have influenced educational policies and practices in areas such as academic achievement, anti-bullying strategies and sex-education curriculum, making visible the new postfeminist, sexual politics of schooling. Moving beyond media or policy critique, however, this book offers new theoretical and methodological tools for researching postfeminism, girlhood and education. It engages with current theoretical debates over possibilities for girls' agency and empowerment in postfeminist, neo-liberal contexts of sexual regulation. It also elaborates new psychosocial and feminist Deleuzian methodological approaches for mapping subjectivity, affectivity and social change. Drawing on two UK empirical research projects exploring teen-aged girls' own perspectives and responses to postfeminist panics, the book shows how real girls are actually negotiating notions of girls as overly successful, mean, violent, aggressive and sexual. The data offers rich insight into girls' gendered, raced and classed experiences at school and beyond, exploring teen peer cultures, friendship, offline and online sexual identities, and bullying and cyberbullying. The analysis illuminates how and when girls take up and identify with postfeminist trends, but also at times attempt to re-work, challenge and critique the contradictory discourses of girlhood and femininity. In this sense the book offers an opportunity for girls to 'talk back' to the often simplistic either wildly celebratory or crisis-based sensationalism of postfeminist panics over girlhood. This book will be essential reading for those interested in feminism, girlhood, media studies, gender and education.

Reporting U.S.-European Relations: Four Nations, Four Newspapers is a compilation of U.S. and European perspectives from different daily newspapers. Chapter 1 is about the Frankfurter Allgemeine Zeitung (FAZ). After a brief background of the newspaper, from one dictator to another,

the paper is described as having no editor. The political, economic, and cultural policies are made by "editor-publishers." Political philosophy in the FAZ is very cohesive and conservative, which readers of a wide political spectrum rely upon. Chapter 2 deals with the New York Times, which is founded in 1851 and has undergone many changes, making it the most respected daily newspaper in the United States. This circulation is considered a chronologist of current events, and more than an opinion maker, it is also considered an educator. Chapter 3 is about The Times (London), founded in 1785 under a different name. This circulation is one of the most influential newspapers in the world, with a succession of notable editors. Considered by some as boring, this newspaper is bought by Rupert Murdoch, making it still in substance a uniquely British expression of life. Chapter 4 is about Le Monde, founded in December 1944 upon the request of General Charles de Gaulle. This circulation is considered the most important and prestigious daily newspaper in France, very nationalistic, and a receptacle for debate. This collection of essays will prove invaluable to practicing journalists, politicians, public and government leaders, and students of journalism. Writers and authors will also find this collection entertaining and informative.

Kissing Architecture explores the mutual attraction between architecture and other forms of contemporary art. In this fresh, insightful, and beautifully illustrated book, renowned architectural critic and scholar Sylvia Lavin develops the concept of "kissing" to describe the growing intimacy between architecture and new types of art--particularly multimedia installations that take place in and on the surfaces of buildings--and to capture the sensual charge that is being designed and built into architectural surfaces and interior spaces today. Initiating readers into the guilty pleasures of architecture that abandons the narrow focus on function,

Lavin looks at recent work by Pipilotti Rist, Doug Aitken, the firm Diller Scofidio + Renfro, and others who choose instead to embrace the viewer in powerful affects and visual and sensory atmospheres. *Kissing Architecture* is the first book in a cutting-edge new series of short, focused arguments written by leading critics, historians, theorists, and practitioners from the world of urban development and contemporary architecture and design. These books are intended to spark vigorous debate. They stake out the positions that will help shape the architecture and urbanism of tomorrow. Addressing one of the most spectacular and significant developments in the current cultural scene, *Kissing Architecture* is an entertainingly irreverent and disarmingly incisive book that offers an entirely new way of seeing--and experiencing--architecture in the age after representation. The book aims to explore how governance and accountability are mediated through material relations involving ordinary everyday objects and technologies. It argues that the key to understanding governance is to focus on political constitution at the level of ontology rather than just on the traditional politics of organization, structure, and human compliance. The argument is developed in relation to a wide variety of empirical materials drawn from three main areas of everyday life: waste management and recycling; the regulation and control of traffic (especially speed cameras and parking); and security and passenger movement in airports.

A course-changing event in one's life can happen in minutes. Or it can form slowly, a primitive webbing splaying into fingers of discontent, a minuscule trail hardening into the sinewed spine of resentment. So it was with the mill workers as the heat-soaked days of summer marched on. City girl Jessie, orphaned at sixteen, struggles to adjust to life with her barely known aunt and uncle in the tiny town of Bradleyville, Kentucky. Eight years later (1968), she plans on leaving--to follow in her revered mother's footsteps of serving the homeless. But the peaceful town she's come to love is about to be tragically shattered. Threats of a labor strike rumble through the streets, and Jessie's new love and her uncle are swept into the maelstrom. Caught between the pacifist teachings of her mother and these two men, Jessie desperately tries to deny that Bradleyville is rolling toward violence and destruction.

The techniques of natural language processing (NLP) have been widely applied in machine translation and automated message understanding, but have only recently been utilized in second language teaching. This book offers both an argument for and a critical examination of this new application, with an examination of how systems may be designed to exploit the power of NLP, accommodate its limitations, and minimize its risks. This volume marks the first collection of work in the U.S. and Canada that incorporates advanced human language technologies into language tutoring systems, covering languages as diverse as Arabic, Spanish, Japanese, and English. The book is organized into sections that express the levels of analysis dealt with in learning and teaching a language and with the tasks of the student as writer, reader, conversant, and actor in the world. These sections bring together research by specialists in linguistics, artificial intelligence, psychology, instructional design, and language teaching. In addition to providing detailed descriptions of working systems, amply illustrated with screens from lesson and authoring interfaces, the contributors address a spectrum of common issues: * What can current NLP technology contribute to computer-assisted language instruction and to research on language learning? * How can this technology meet the demands of pedagogical theory for communicative language teaching in authentic contexts? * How can designers constrain tutoring environments to ensure accurate analysis of learners' language? * What can NLP-based systems teach us about language acquisition, about linguistic theory, and about theories of language pedagogy? * What lessons have been

learned in using these systems to date? Discipline-specific issues are illuminated as well: the relative merits of the major syntactic frameworks for NLP-based language tutoring; the adaptation of theories like lexical conceptual structure to support semantic interpretation; the integration of input language with visual microworlds and dialogue games; the pragmatics of the tutoring discourse; the selection of instructional principles to guide system design; and the accommodation of design to individual differences and learner styles. A concluding section assesses this work from larger theoretical and practical perspectives -- experimental psychology and psycholinguistics, linguistics, language teaching, and second language acquisition research.

Additional essays investigate the complex relationship the show's audience has with the characters through blogging, fan fiction, visits to filming locations, and the creation of websites.

The Future of Anthropological Knowledge the chapters explore the question of the nature of social knowledge from a variety of perspectives and locations such as China, Africa, the USA and elsewhere. By examining the changing nature of anthropological knowledge and of the production of that knowledge, this book challenges the notion that only western societies have produced social theories of modernity and of global scope. Knowledge of society can no longer be restricted to a knowledge of face-to-face social relations but must encompass the effect of technology, global consumption patterns and changing geo-political configurations. The Future of Anthropological Knowledge will be of interest to anthropologists and students of culture and society.

Haunted by a secret knowledge and a repressed enchantment, Western rationality is not what it seems. Rembrandt's famous painting of an anatomy

lesson, the shrunken head of an Australian indigenous leader, an aerial view of Paris from a balloon: all are windows to enchantment, curiosities that illuminate something shadowy and forgotten lurking behind the neat facade of a rational world. In *Curious Visions of Modernity*, David Martin unpacks a collection of artifacts from the visual and historical archives of modernity, finding in each a slippage of scientific rationality—a repressed heterogeneity within the homogenized structures of post-Enlightenment knowledge. In doing so, he exposes modernity and its visual culture as haunted by precisely those things that rationality sought to expunge from the “enlightened” world: enchantment, magic, and wonderment. Martin traces the genealogies of what he considers three of the most distinct and historically immediate fields of modern visual culture: the collection, the body, and the mapping of spaces. In a narrative resembling the many-drawer curiosity cabinets of the Renaissance rather than the locked glass cases of the modern museum, he shows us a world renewed through the act of collecting the wondrous and aberrant objects of Creation; tortured and broken flesh rising from the dissecting tables of anatomy theaters to stalk the discourses of medical knowledge; and the spilling forth of a pictorializing geometry from the gilt frames of Renaissance panel paintings to venerate a panoptic god. Accounting for the visual

disenchantment of modernity, Martin offers a curious vision of its reenchantment.

What would the Framers of the Constitution make of multinational corporations? Nuclear weapons? Gay marriage? They led a preindustrial country, much of it dependent on slave labor, huddled on the Atlantic seaboard. The Founders saw society as essentially hierarchical, led naturally by landed gentry like themselves. Yet we still obey their commands, two centuries and one civil war later. According to Louis Michael Seidman, it's time to stop. In *On Constitutional Disobedience*, Seidman argues that, in order to bring our basic law up to date, it needs benign neglect. This is a highly controversial assertion. The doctrine of "original intent" may be found on the far right, but the entire political spectrum--left and right--shares a deep reverence for the Constitution. And yet, Seidman reminds us, disobedience is the original intent of the Constitution. The Philadelphia convention had gathered to amend the Articles of Confederation, not toss them out and start afresh. The "living Constitution" school tries to bridge the gap between the framers and ourselves by reinterpreting the text in light of modern society's demands. But this attempt is doomed, Seidman argues. One might stretch "due process of law" to protect an act of same-sex sodomy, yet a loyal-but-contemporary reading cannot erase the fact that the Constitution allows a candidate who lost the popular

Read Free Parts Manual For Hobart Crs86a Dishwasher

election to be seated as president. And that is only one of the gross violations of popular will enshrined in the document. Seidman systematically addresses and refutes the arguments in favor of Constitutional fealty, proposing instead that it be treated as inspiration, not a set of commands. The Constitution is, at its best, a piece of poetry to liberty and self-government. If we treat it as such, the author argues, we will make better progress in achieving both.

Hydrology as a scientific field is concerned with the study of existence, properties, quality and distribution of water on Earth. It branches out into subdomains of surface water, ground water and marine hydrology. There has been rapid progress in this field and its applications are finding their way across multiple industries. Some of the most prominent applications are power generation, irrigation, providing potable water for consumption, etc. This book is a compilation of chapters that discuss the most vital concepts and emerging trends in the field of hydrology. Some of the diverse topics covered in this book address the varied branches that fall under this category. It is an essential guide for both academicians and those who wish to pursue this discipline further.
