This book addresses one of the most crucial and common questions confronting planners of languages other than English, that is, how the impacts of global languages on local languages should be dealt with: internationalization or local language promotion? This empirical study examines the implementation of Iran's governmental language and terminology policy to accelerate rarely used abbreviation methods in Persian in order to preserve the language from the extensiveness of borrowed English abbreviated forms. This book provides an in-depth analysis of relevant linguistic theories as well as the structure and social context of the Persian language itself, rather than relying on personal opinions or beliefs either in favour of or against abbreviation. The text appeals to politicians, language planners, terminologists, lecturers, authors and translators of scientific works, especially those who are speakers of languages other than English and seek to promote their local languages. This book is particularly relevant to linguistics students (both undergraduate and graduate students) and language teachers and researchers in the broader areas of language education and curriculum design.

"This book assembles the practical rules and details for the efficient and economical execution of deep excavations. It draws together a wealth of experience of both design and construction from published work and the lifetime practice of the author. This second edition is extensively revised to include changes in design emphasis including those due to Eurocode 7 and descriptions of the latest equipment, construction techniques and geotechnical processes. Additional details include those of the latest piling and diaphragm wall equipment and innovations in top-down construction applied to basements and cut-and-cover works. The section on caissons has been expanded to include design methods."--BOOK JACKET.

"This book presents a wide range of the most current issues related to the planning, design, maintenance, and management of telecommunications and networking technologies and applications in organizations"--Provided by publisher.

"Offers detailed coverage of applied polymer processing--presenting a wide range of technologies and furnishing state-of-the-art data on polymer components, properties, and processibility. Reviews fundamental rheological concepts. Contains over 1600 bibliographic citations, some 450 equations, and over 400 tables, drawings, and photographs."

Comprehensive and up-to-date, the text integrates major construction management topics with an explanation of the methods of heavy/highway and building construction. It incorporates both customary U.S. units and metric (SI) units and is the only text to present concrete formwork design equations and procedures using both measurement systems. This edition features information on new construction technology, the latest developments in soil and asphalt compaction, the latest developments in wood

preservation and major health, safety and environmental concerns. Explains latest developments in soil and asphalt compaction. Presents the latest developments in wood preservation materials and techniques which respond to environmental concerns. Expanded and updated coverage of construction safety and major health hazards and precautions. Designed to guide construction engineers and managers in planning, estimating, and directing construction operations safely and effectively.

"The aim of this book is to give practical guidance on the safe dental management of patients with special needs and to highlight which patients should be referred for specialist care. Patient conditions are listed alphabetically, with dental management being discussed under standardised headings. Summary tables for each condition provide a source of quick reference, and the final section of the book discusses orofacial problems such as caries, tooth erosion, dry mouth and bruxism."--BOOK JACKET.

Develop high-performance hydraulic and pneumatic power systems Design, operate, and maintain fluid and pneumatic power equipment using the expert information contained in this authoritative volume. Fluid Power Engineering presents a comprehensive approach to hydraulic systems engineering with a solid grounding in hydrodynamic theory. The book explains how to create accurate mathematical models, select and assemble components, and integrate powerful servo valves and actuators. You will also learn how to build low-loss transmission lines, analyze system performance, and optimize efficiency. Work with hydraulic fluids, pumps, gauges, and cylinders Design transmission lines using the lumped parameter model Minimize power losses due to friction, leakage, and line resistance Construct and operate accumulators, pressure switches, and filters Develop mathematical models of electrohydraulic servosystems Convert hydraulic power into mechanical energy using actuators Precisely control load displacement using HSAs and control valves Apply fluid systems techniques to pneumatic power systems

The secret to streamlined scheduling of mining and civil engineering projects is a solid understanding of the basic concepts of rock cutting mechanics. Comparing theoretical values with experimental and real-world results, Mechanical Excavation in Mining and Civil Industries thoroughly explains various rock cutting theories developed for chisel, conical, disc, and button cutters. The authors provide numerical examples on the effect of independent variables on dependent variables, as well as numerical and solved examples from real-life mining and civil engineering projects using equipment such as: Hard- and soft-ground tunnel boring machines (TBMs) Roadheaders Shearers Ploughs Chain saws Raise borers Impact hammers Large-diameter drill rigs Microtunnel boring machines This book assists students and practicing engineers in selecting the most appropriate machinery for a specific job and predicting machine performance to ensure efficient extraction, and offers background information on rock cutting mechanics and different mechanical miners.

THE ordinary fields of psychological inquiry, largely in possession of the pathologist, are fringed by a borderland of occult and dubious experiment into which pathologists may occasionally venture, but it is left for the most part to unchartered explorers. Beyond these fields and this borderland there lies the legendary wonder-world of Theurgy, so called, of Magic and Sorcery, a world of fascination or terror, as the mind which regards it is tempered, but in either case the antithesis of admitted possibility.

There all paradoxes seem to obtain actually, contradictions coexist logically, the effect is greater than the cause and the shadow more than the substance. Therein the visible melts into the unseen, the invisible is manifested openly, motion from place to place is accomplished without traversing the intervening distance, matter passes through matter. There two straight lines may enclose a space; space has a fourth dimension, and untrodden fields beyond it; without metaphor and without evasion, the circle is mathematically squared. There life is prolonged, youth renewed, physical immortality secured. There earth becomes gold, and gold earth. There words and wishes possess creative power, thoughts are things, desire realises its object. There, also, the dead live and the hierarchies of extra-mundane intelligence are within easy communication, and become ministers or tormentors, guides or destroyers, of man. There the Law of Continuity is suspended by the interference of the higher Law of Fantasia. But, unhappily, this domain of enchantment is in all respects comparable to the gold of Faerie, which is presumably its medium of exchange. It cannot withstand daylight, the test of the human eye, or the scale of reason. When these are applied, its paradox becomes an anticlimax, its antithesis ludicrous; its contradictions are without genius; its mathematical marvels end in a verbal quibble; its elixirs fail even as purges; its transmutations do not need exposure at the assayer's hands; its marvel-working words prove barbarous mutilations of dead languages, and are impotent from the moment that they are understood; departed friends, and even planetary intelligences, must not be seized by the skirts, for they are apt to desert their draperies, and these are not like the mantle of Elijah.

The First World War's centenary generated a mass of commemorative activity worldwide. Officially and unofficially; individually, collectively and commercially; locally, nationally and internationally, efforts were made to respond to the legacies of this vast conflict. This book explores some of these responses from areas previously tied to the British Empire, including Australia, Britain, Canada, India and New Zealand.

Showcasing insights from historians of commemoration and heritage professionals it provides revealing insider and outsider perspectives of the centenary. How far did commemoration become celebration, and how merited were such responses? To what extent did the centenary serve wider social and political functions? Was it a time for new knowledge and understanding of the events of a century ago, for recovery of lost or marginalised voices, or for confirming existing clichés? And what can be learned from the experience of this centenary that might inform the approach to future commemorative activities? The contributors to this book grapple with these questions, coming to different answers and demonstrating the connections and disconnections between those involved in building public knowledge of the 'war to end all wars'.

Jason, like many people, is an addict. His addiction doesn't center on any drug or alcohol. He's a pornography and masturbation addict, and the insidious nature of his addiction erodes his self-worth, his relationships, and his career. Jason meets David at a twelve-step meeting, where David offers him a new approach to treating pornography addiction. Through a series of meetings, David guides Jason as he successfully

overcomes his addiction, a process supported by glimpses into Jason's family and how his relationships improve as pornography loses its hold on his life. Jason's story is fictional. The treatment plan he follows is very real. Designed by author and pornography addiction treatment expert Brian Brandenburg, the strategies found in *Power over Pornography* are praised by those who, having taken part in Brandenburg's program, now pursue lives free of pornographic viewing. Brandenburg's innovative treatment plan comes at a crucial moment in the fight against pornography and masturbation addiction. A generation of Internet-savvy children has grown up with access to pornography, quite literally, at their keyboard-typing fingertips. The images and videos they view online are far more graphic than their parents can imagine. Now the children of this generation have become young adults, with many addicted to the instant gratification of pornography. Like Jason, most pornography and masturbation addicts are male, but women are also afflicted. Maintaining normal, healthy relationships becomes almost impossible while in the grip of pornography. Anxiety and guilt over your actions worsen into clinical depression and self-loathing. Work productivity suffers, and an addict with on-the-job access to the Internet is always a few mouse clicks away from job termination and scandal. Jason and others in his situation are discovering traditional twelve-step programs don't address key aspects of pornography and masturbation addiction. Brandenburg's radical treatment takes a new, often counterintuitive approach to overcoming pornography addiction. His advice sometimes contradicts traditional strategies, but his system works. A comprehensive, easy-to-understand approach to pornography addiction treatment, *Power over Pornography* appeals to all readers. You can overcome your addiction. Let Brian Brandenburg and Jason be your guides.

This book is the third in a series of publications devoted to the biogeographical and ecological research in the Southern Hemisphere, published in the "*Monographiae Biologicae*". After dealing with Australia (vol. VIII) and Southern Africa (Vol. XIV) it was thought essential to include Antarctica in this series. Ever since the expedition of the "*Belgica*" made the first successful wintering within the antarctic circle in 1898 and brought back a very rich harvest of scientific data, Belgium kept a vivid interest in Antarctica and took an active part in the modern and international exploration of this vast continent. As part of their programs for the International Geophysical Year (I. G. Y.) twelve nations established permanent or semi-permanent bases on the Antarctic Continent or on subantarctic islands. Thus a new era of vast and free international scientific collaboration in the Antarctic was opened and it culminated in the formulation and the signing of the Antarctic Treaty (Washington 1959). It was recognized and accepted that "Antarctica" shall be used for peaceful purposes only and "Freedom of scientific investigation in Antarctica and cooperation toward that end, as applied during the I. G. Y. , shall continue . . ." In order to organize this collaboration e. g. by full exchange of programs and results a "Special Committee on Antarctic Research" (S. C. A. R.) was founded in 1957.

This work details the preparation of dispersions in liquids. It sets out to bridge the gap in information for the chemist who is not applications oriented and the chemical engineer who needs to solve problems in the field based on theoretical methods of dispersions of solids, liquids and gases. Insights are provided into many topics, including the transportation and handling of finely divided solids or highly viscous liquids; the reactions

between reactants dissolved in immiscible phases; the formation of porous materials; and filtration.

How Cool Are Penguins is a book that will introduce young children to the world of penguins. It is written and illustrated in a fun and informative way that will entertain both the young and the young at heart.

Excerpt from Dynamics of Bases and Foundations The development of rational and effective approaches to these problems has been greatly hampered throughout the world by a lack of continuity and organized coordination of efforts in the several disciplines involved. Since its creation some 35 years ago Dr. Barkan's laboratory has made an impressive start in remedying this situation. Prior to the 1870s, DuBois was a forest settlement with only a handful of families living in the area. John DuBois changed that when he settled in the area and created one of the largest lumber industries in the state. In less than two decades, a thriving town had sprung up. A devastating fire in 1888 destroyed the business district; however, as businesses such as coal mining, iron ore, and sandstone continued to grow, the area was rebuilt. With the expansion of the railroad, surrounding towns began to develop. Through rare photographs and early postcards, Around DuBois provides glimpses of industries such as the lumbermill, the area coal mines, the stone quarry of Falls Creek, the Van Tassell Tannery, the Brewery, and the Buffalo, Rochester, and Pittsburgh Railroads. Also included are images of events and people who left their mark on the area, including celebrities such as Thomas Edison, noted painter Richard Burfoot, and cowboy star of silent movies Tom Mix.

The excitement and the glitz of mechatronics has shifted the engineering community's attention away from fluid power systems in recent years. However, fluid power still remains advantageous in many applications compared to electrical or mechanical power transmission methods. Designers are left with few practical resources to help in the design and
