Our current healthcare system's broken. The Organization for Economic Co-Operation and Development (OECD) predicts health care costs could increase from 6% to 14% of GDP by 2060. The cause of this increase is due to (1) a global aging population, (2) growing affluence, (3) rise in chronic diseases, and (4) better-informed patients; all of which raises the demand for healthcare. In 2006, Michael Porter and Elizabeth Teisberg authored the book 'Redefining Health Care: Creating Value-Based Competition on Results.' In it, they present their analysis of the root causes plaguing the health care industry and make the case for why providers, suppliers, consumers, and employers should move towards a patient-centric approach that optimizes value for patients. According to Porter, "value for patients should be the overarching principle for our broken system." Since 2006, Mr. Porter, accompanied by his esteemed Harvard colleague, Robert Kaplan, have worked tirelessly to promote this new approach and pilot it with leading healthcare delivery organizations like Cleveland Clinic, Mayo Clinic, MD Anderson, and U.S. Department of Veteran Affairs. Given the current state of global healthcare, there is urgency to achieve widespread adoption of this new approach. The intent of this book is to equip all healthcare delivery organizations with a guide for putting the value-based concept into practice. This book defines the practice of value-based health care as Value Management. The book explores Mr. Porter's Value Equation ($\text{Value} = \text{Outcomes} / \text{Cost}$), which is central to Value Management, and provides a step-by-step process for how to calculate the components of this equation. On the outcomes side, the book presents the Value Realization Framework, which translates organizational mission and strategy into a comprehensive set of performance measures and contextualizes the measures for healthcare delivery. On the costs side, the book details the Harvard endorsed time-driven activity based costing (TDABC) methodology, which has proven to be a modern catalyst for defining HDO costs. Finally, this book covers the need and a plan to establish a Value Management Office to lead the delivery transformation and govern operations. This book is designed in a format where any organization can read it and acquire the fundamentals and methodologies of Value Management. It is intended for healthcare delivery organizations in need of learning the specifics of achieving the implementation of value-based healthcare.

Over 200,000 copies sold! Thomas R. Ittelson's master work for entrepreneurs, non-financial managers, business students, lawyers, lenders, and investors - the bestselling book of its kind, with over 200,000 copies in print - has gotten even better with this 20th anniversary edition. Ittelson is an expert at translating complicated financial topics in an accessible way for non-financial audiences. In this book, he empowers readers by clearly and simply demonstrating how the three major accounting statements interact to offer a snapshot of a company's financial health. This book teaches readers how to use specialized accounting vocabulary and makes accessible the structure and purpose of the three major numeric statements that describe a company's financial condition. Each statement paints a different and essential picture - the "three-legged stool" of company reporting: The income statement shows the manufacturing (or service offerings) and selling actions of the company that result in profit or loss during a period. It gives a very important perspective on the company's performance, its profitability. The cash flow statement details cash into and out of the company for a period. You need money to make money. Running out of cash is bad. Duh. The balance sheet records at the end of a period, an instant in time, what the company owns and what it owes, including the owners' stake, called shareholders' equity. With two new major topic sections (nonprofit organization accounting and pricing theory for profitability) and spot color reformatting to improve comprehension, this third edition of Financial Statements is simply the clearest and most comprehensive introduction to financial reporting available. No accounting background is required.

Power and Energy industry is a highly capital intensive business field. Furthermore there is a very close interlinkage between technologies and economics that requires engineers and economists to have a common understanding of project evaluation approaches and methodologies. The book's overall objective is to provide a comprehensive but concise coverage of engineering economics required for techno-economic evaluation of investments in power and energy system projects. Throughout the book, the emphasis is on transferring practical know-how rather than pure theoretical knowledge. This is also demonstrated in numerous examples derived from experience of respective projects. The book comprises seven chapters. The text part is supported by about 25 tables, 40 figures, 55 application examples and 7 Case Studies. Target audience of the book are primarily international consultants, staff members of engineering companies, utility personnel, energy economists and lawyers, as well as employees of government agencies entrusted with regulating the energy and utility sector and, finally, students in related fields of engineering and economics.

As the objective of capital budgeting is to add values to the wealth of an owner of a business, capital budgeting primarily insists on the recovery of investments made in the projects. To improve the owner's wealth, it is important to evaluate and identify profitable projects using some evaluation tools. Concerning the project evaluation, there are traditional and non-traditional tools in application to evaluate the projects in finance and financial management. In this context, this paper illustrates the project evaluation techniques contextually with specific exhibits as examples to make the reader to understand them. There are two primary evaluation techniques: (1) Traditional Methods and (2) Non-traditional methods that incorporate time value of money in the evaluation process. This book fundamentally encompasses the traditional methods of namely Payback Period (PBP) and Accounting Rate of Return (ARR), and the non-traditional methods of Net Present Value (NPV), Internal Rate of Return (IRR), Modified Internal Rate of Return (MIRR), Profitability Index (PI) or Cost-Benefit Ratio (CBR), Discounted (modified) Payback Period (DPBP or MPBP) and Time-adjusted Discounting Method (TADM). If where an organization allocates its resources determines its strategy, why is it that so few companies actively manage the resource allocation process? "*Optimizing Corporate Portfolio Management: Aligning Investment Proposals with Organizational Strategy*" goes beyond platitudes about why you should use corporate portfolio management (CPM) by offering a practical methodology to bring this powerful discipline to your organization. "*Optimizing Corporate Portfolio Management*" takes an expansive view of where CPM can be utilized by demonstrating that it can be used across any business line, product group or functional area, e.g., IT, R&D, innovation, marketing, salesforce, capital expenditure, etc. CPM is appropriate anywhere discretionary investments are being selected and executed. As a result, other terms used to describe portfolio management such as IT portfolio management, enterprise portfolio management, and project portfolio management are all merely subsets or slices of CPM. The book is written by Anand Sanwal, an expert on CPM, who has led American Express' CPM discipline (referred to as American Express Investment Optimization). American Express' CPM efforts are widely recognized as the most extensive, substantial and progressive deployment of CPM across any organization. Sanwal avoids academic theories and consultant jargon to ultimately deliver pragmatic and proven recommendations on how to make CPM a reality. The book features a foreword by Gary Crittenden, former CFO and EVP of American Express, and several case studies from leading financial services, technology, and government organizations utilizing CPM. Additionally, the book has received significant praise from thought leaders at Google, HP, American Express, The CFO Executive Board, Gartner, Accenture Marketing Sciences, The Wharton School of Business and many others.

Organizations are successful based on their ability to achieve strategic goals. Why didn't you achieve your strategy? Too many organizations waste time and money on developing strategy but don't achieve their goals. What goes wrong? Poor predictions about the future; internal politics that impact the projects selected; biases in the decision-making process, and other stumbling blocks. This book provides the approach that significantly increases an organization's ability to achieve its strategy. This is not a book about developing strategy. This is a book that will help you actually achieve the strategy the organization's leadership has developed. Strategy is necessary but it is a complete waste of time unless it is effectively turned into real results. If you want to see where an organization will be in 5 years, don't look at its strategic goals. Look at where management spends the money.

The goal of this book is to help HR decision makers recognize where to capture value from HR technology, learn how to demonstrate that value, and make better implementation decisions. The authors include topics such as how HR technology can deliver strategic value; whether to outsource HR processes, HR technology, and project management; training and change management; measuring value through ROI analyses and HR Analytics; and, how to evaluate and manage future HR innovations. Our approach is to introduce theoretical frameworks from management science to guide decision making about HR technology. These theoretical approaches provide a scientific basis and structure to analyze business challenges and improve decision making compared with using intuition alone or relying on vendor best practices. The theories and frameworks come from strategic management, economics, accounting, finance, organizational behavior, and information systems. This breadth helps managers understand the many ways HR technology decisions can increase value.

Inhaltsangabe:Abstract: This diploma thesis paper is, after contemplating the current state of ITC / telco's shift towards commoditisation and challenges in facing the upcoming overall mobile / wireless development (beyond 3G, B3G, / 4G) aimed at prosperously resolving a marketing proposition on a quite ingenious Siemens mobile P2P communication solution, named Siemens Anyw@re PocketSERVent, by virtue of the marketers' generic means, the Product-marketing mix dedicated to fundamental questions of product, price, promotion, place (P4). Strategic marketing and ITC business as well as down-to-earth / operational themes will get propelled. The chief emphasis is put on surging virtualisation related to product / svce / property and, as usually less exposed, the shift towards intangible values, foremost customer relationship and momentum of the hi-tech. brand (perception). The intend is to supply a big yet detailed P2P, 3G / B3G and wireless picture to the marketer (even accountant) as well as applied marketing / pricing issues to the S/W developer or mobile techn. expert. After a brief overview (ch. 1), chapter 2 is about introducing the main points rel. peer-to-peer (P2P) it's rather social impacts, technological mindset and ongoing research, as well as contemporary benefits. The intention is to free both the subject and evaluation from hype or byzantine aspects; to present P2P's potential as well as existent contributions to corporations aware of bus. value from IT, paralleling the fashion well-known IT players dominate e.g. Web services. Chapter 3 prepares a general understanding of present-day and forthcoming ITC leitmotifs, more precisely, for why ITC, esp. 3G innovations, have been disappointing. Analysing soft product and service (svce / svc.) innovations is upon hard value; at the dawn of this decade's decentralisation / mobilisation and virtualisation following results and side effects of globalisation the tractate's author is going to constantly question whether proven and established marketing practice can answer the train of virtual i.e. through-and-through digital products, value chains, organisations or business and / or value creation communities. Nevertheless ch. 3's focal point is the wireless or mobile wireless, resp., upgrowth (convergence rel. mobile IP, P2P, B3G / 4G). At beginning of the new millennium telcos are forced to get out of the industrial age's proprietary hardware and services. Less because of customer's [...]
