The State of Independence: Key Challenges Facing Private Schools Today David James,Jane Lunnon,2019-04-30

Exploring the most significant challenges facing independent schools today, this book asks leading figures from education, economics, politics, philosophy and the arts to give their views on how independent schools can adapt to rapidly changing markets which see them scrutinised as never before. Acknowledging the independent sector as a vital and growing part of the global education system, this book explores how schools are to respond to financial, moral, pastoral and academic challenges, and so ensure their own survival, and the futures of the children they educate. Breaking a complex and varied field down into ten clear areas of analysis, essays written by leading education experts tackle the key challenges faced by independent schools around the world. Commentators consider the issues created by the upward trend of educating international students, question the extent to which independent schools have echoed societal movements towards greater access, diversity and gender fluidity, and provide first-hand insight into the experiences of staff, pupils and parents involved in the everyday functioning and longer-term development of the independent sector. A health check on this most controversial of sectors, this book will enlighten and inform not only those working in independent schools today, but anyone interested in education, and will make an important contribution to a bigger debate about the place of independent schools at a time of political, economic and societal uncertainty.

College Andrew Delbanco,2023-04-18 The strengths and failures of the American college, and why liberal education still matters As the commercialization of American higher education accelerates, more and more students are coming to college with the narrow aim of obtaining a preprofessional credential. The traditional four-year college experience—an exploratory

time for students to discover their passions and test ideas and values with the help of teachers and peers—is in danger of becoming a thing of the past. In *College*, prominent cultural critic Andrew Delbanco offers a trenchant defense of such an education, and warns that it is becoming a privilege reserved for the relatively rich. In describing what a true college education should be, he demonstrates why making it available to as many young people as possible remains central to America's democratic promise. In a brisk and vivid historical narrative, Delbanco explains how the idea of college arose in the colonial period from the Puritan idea of the gathered church, how it struggled to survive in the nineteenth century in the shadow of the new research universities, and how, in the twentieth century, it slowly opened its doors to women, minorities, and students from low-income families. He describes the unique strengths of America's colleges in our era of globalization and, while recognizing the growing centrality of science, technology, and vocational subjects in the curriculum, he mounts a vigorous defense of a broadly humanistic education for all. Acknowledging the serious financial, intellectual, and ethical challenges that all colleges face today, Delbanco considers what is at stake in the urgent effort to protect these venerable institutions for future generations.

Handbook of Research on Reading Comprehension, Second Edition Susan E. Israel, 2017-01-02 This edition provides a transformative snapshot of reading comprehension as a field of study at a seminal moment. It maintains the same high level of standards with respect to (1) historical perspectives useful for laying the foundation of study on reading comprehension; (2) theoretical perspectives that allow the reader to consider different views on how specific areas have evolved since the first edition; (3) excellent chapters on various elements of reading comprehension, including major research studies in assessment, cultural impacts of reading comprehension, issues affecting English language learners, and consideration of international populations; and (4) identification of future research needs to help raise important questions and stimulate possible hypotheses for future research--

Handbook of International Research in Mathematics Education Lyn D. English, David Kirshner, 2015-07-30 This third edition of the *Handbook of International Research in Mathematics Education* provides a comprehensive overview of the most recent theoretical and practical developments in the field of mathematics education. Authored by an array of internationally recognized scholars and edited by Lyn English and David Kirshner, this collection brings together overviews and advances in mathematics education research spanning established and emerging topics, diverse workplace and school environments, and globally representative research priorities. New perspectives are presented on a range of critical topics including embodied learning, the theory-practice divide, new developments in the early years, educating future mathematics education professors, problem solving in a 21st century curriculum, culture and mathematics learning, complex systems, critical analysis of design-based research, multimodal technologies, and e-textbooks. Comprised of 12 revised and 17 new chapters, this edition extends the Handbook's original themes for international research in mathematics education and remains in the

process a definitive resource for the field.

Earth Observation for Water Resources Management Luis García,Diego Rodríguez,Marcus Wijnen,Inge Pakulski,2016-04-14 Water systems are building blocks for poverty alleviation, shared growth, sustainable development, and green growth strategies. They require data from in-situ observation networks. Budgetary and other constraints have taken a toll on their operation and there are many regions in the world where the data are scarce or unreliable. Increasingly, remote sensing satellite-based earth observation is becoming an alternative. This book briefly describes some key global water challenges, perspectives for remote sensing approaches, and their importance for water resources-related activities. It describes eight key types of water resources management variables, a list of sensors that can produce such information, and a description of existing data products with examples. *Earth Observation for Water Resources Management* provides a series of practical guidelines that can be used by project leaders to decide whether remote sensing may be useful for the problem at hand and suitable data sources to consider if so. The book concludes with a review of the literature on reliability statistics of remote-sensed estimations.

Counter-Terrorism Community Engagement Jason Hartley,2021-04-19 This book offers insights into the building of trust in Muslim communities through community engagement in a climate of counter-terrorism. Police engagement with Muslim communities is complex with a history of distrust. This book first attempts to understand the role and implications of uncertainty on community engagement in Muslim communities, and then explores the cultural nuances associated with the demonstration of trustworthiness, and decisions to bestow trust. It further highlights the complexities and implications for Muslim leaders when trying to simultaneously engage police and appease their own communities; the book exposes community perceptions of an over-reaction by authorities that has moved suspicion from a handful of terrorists to the entire Muslim community, resulting in problematic community perceptions that Muslim communities are being targeted by police. The findings suggest that the intentionality of police is a highly significant consideration in trust negotiations, and reveals a number of cultural preferences considered critical to trust negotiations. The book further highlights opportunities to enhance the development of trust and avoid pitfalls that can be problematic to community engagement. The lessons learned seek to enhance the existing body of literature regarding strategies and resources to improve counter-terrorism community engagement with Muslim communities. This book will be of much interest to students of counter-terrorism, preventing

violent extremism, deradicalization, and security studies.

The Ocean in Motion Manuel G. Velarde, Roman Yu. Tarakanov, Alexey V. Marchenko, 2018-03-28 This book commemorates the 70th birthday of Eugene Morozov, the noted Russian observational oceanographer. It contains many contributions reflecting his fields of interest, including but not limited to tidal internal waves, ocean circulation, deep ocean currents, and Arctic oceanography. Special attention is paid to studies on internal waves and especially those on tidal internal waves in the Global Ocean. These papers describe the most important open problems concerning experimental studies of internal waves and their theoretical, numerical, and laboratory modeling. Further contributions investigate the physics of surface waves and their interaction with internal waves. Here, the focus is on describing interaction processes between internal waves and deep currents in the ocean, especially currents of Antarctic Bottom Water in abyssal fractures. They also touch on the problem of oceanic circulation and related processes in fjords, including those occurring under sea ice. Given its breadth of coverage, the book will appeal to anyone interested in a survey of ocean dynamics, ranging from historic perspectives to modern research topics.

Climate and Health Education: Defining the Needs of Society in a Changing Climate Cecilia Sorensen, Gaurab Basu, Lisa H. Patel, Arianne Teherani, 2023-11-16 The adverse effects of climate change are now apparent and present urgent and complex challenges to human health and health systems globally. There is an imperative for quick action on many fronts: to recognize and respond to climate-health threats; prevent climate change at its source by reducing greenhouse gas emissions; support “greener” systems throughout the economy, including healthcare; understand the health co-benefits of adaptation and mitigation; and communicate effectively about these issues. Climate change is intertwined with historical and structural inequities and effective solutions must actively improve health equity. To meaningfully address these deep and interconnected issues, there is a growing imperative across the educational landscape to move beyond existing constraints toward new ways of thinking and learning. Many have recognized that we must create societal systems that account for the health of all people now and into the future while simultaneously preserving and improving the environment on which our life depends. Such transformations rest on the skills, knowledge, values, and attitudes of the workforce, not just in health and health care, but within all sectors. However, despite the health crisis of climate change at our doorstep, development of climate and health curricula is nascent, although is a growing consideration of leaders globally. Because the health impacts from climate and planetary change are so myriad and intertwined, sectors must work together like never before to move beyond existing silos of practice to a shared landscape and vision – in practice, but first in education.

Educational Administration Innovation for Sustainable Development Aan Komariah, Taufani Kurniatun, Dedy Kurniady, Rita Anggorowati, Ade Gafar Abdullah, Asep Nandiyanto, 2018-08-06 The International Conference on Research of Educational

Administration and Management (ICREAM) held on October 17, 2017 in Bandung, West Java, Indonesia. The aim of ICREAM is to provide a platform for educators, administrators, managers, leaders, policy makers, researchers, scholars, principals, supervisors, graduate students, practitioners, academicians, professionals and teachers from different discipline backgrounds to present and discuss research, developments and innovations in the fields of educational administration. It provides opportunities for the delegates to exchange new ideas and application experiences, to establish business or research relations and to find global partners for future collaboration.

Clay's Handbook of Environmental Health Stephen Battersby, 2022-08-16 Since its first publication in 1933, Clay's Handbook of Environmental Health (under its different names) has provided a definitive guide for the environmental health practitioner (EHP), and an essential reference for the consultant and student. This 22nd edition continues with its more recent successful structure, reviewing the core principles, techniques, competencies and skills required of an EHP, and then outlining the specialist subjects without getting bogged down in a legalistic approach, seeking to broaden the content for a more global audience. This new edition seeks to educate the EHP on the public health impacts of global heating and the climate emergency and also reflects the COVID-19 pandemic, as might be expected. Although seeking to have global appeal, the impact of the UK leaving the EU is also addressed. The book examines environmental health in different settings, including in the military, working in both conflict and natural disaster settings, and environmental health at sea and airports. In line with previous editions, case studies are used to illustrate how EH problems have been resolved. This new edition includes guidance on key issues in public and environmental health including air pollution, contaminated land, housing and health, noise, water, food safety, pests and vector control, chemicals in the environment and radiation, as well as sustainability and public health and humanitarian crises. This handbook aims to give a basic understanding of the philosophical basis of environmental health, as well as the required technical aspects and an understanding of environmental health in different settings. All chapters have sections on further reading and sources of information. Clay's Handbook is essential reading for all practitioners, students and researchers in environmental and public health wherever they are working.

Financial Management: Principles and Applications J William Petty, Sheridan Titman, Arthur J Keown, Peter Martin, John D Martin, Michael Burrow, 2015-05-20 The sixth edition of Financial Management provides students with an overview of financial management suited to the first course in finance. The focus of the text is on the big picture, providing an introduction to financial decision making grounded in current financial theory and the current state of world economic conditions. Attention is paid to both valuation and capital markets, as well as their influence on corporate financial decisions. The 10 basic principles of finance are introduced in the first chapter and woven throughout the text, to give students a solid

foundation from which to build their knowledge of finance. The goal of this text is to go beyond teaching the tools of a discipline or a trade and help students gain a complete understanding of the subject. This will give them the ability to apply what they have learnt to new and as yet unforeseen problems—in short, to educate students in finance.
