As an increasing number of children and adolescents with psychiatric symptoms go unrecognized in our current health care system, the ability to identify and treat these issues in multiple health care settings has become vitally important. With access to primary care providers increasing and a shortage of child psychiatric providers, collaboration between psychiatric, pediatric and family advanced practice nurses is essential to improving care for this vulnerable population. "Child and Adolescent Behavioral Health: A Resource for Advanced Practice Psychiatric and Primary Care Practitioners" "in Nursing" provides a practical reference to aid in this endeavor. Aimed at advanced practice nurses and graduate students in nursing, this book is divided into 4 sections addressing assessment, treatment, special populations, and special issues. Within these sections, each chapter includes state-of-the-art, evidence-based information about the most common issues faced by psychiatric and primary care practitioners alike. Chapters focused on disorders review clinical manifestation, etiology, nursing interventions, integration with primary care, and implications for practice, research, and education. Chapters focused on issues describe the linkages between the behavioral/psychiatric profile of the child and associated risk and management strategies. Written/reviewed by over 70 nurse experts, "Child and Adolescent Behavioral Health: A Resource for Advanced Practice Psychiatric and Primary Care Practitioners" "in Nursing" is a must-have reference for all practitioners caring for children and adolescents. Diagnostic Pediatric Hematopathology is unique in providing an accurate and up-to-date guide to the diagnosis of benign and malignant hematologic disorders of childhood. The text discusses the development of the hematopoietic and lymphoid systems - and how this affects normal and abnormal findings in children at various ages. Also examined are the morphologic, immunophenotypic, cytogenetic, and molecular genetic characteristics of most pediatric-specific hematologic diseases. This is an excellent reference that ensures accurate

diagnoses when evaluating peripheral blood, bone marrow, and lymph nodes of children. The text is written by a team of experienced pediatric hematopathologists and clinical scientists drawn from major academic children's hospitals in the United States, Europe, and Canada. It will be a valuable tool in the every day practice of pathologists, pediatric pathologists, and hematopathologists, and a ready educational resource for fellows, pathology residents, medical students, clinical scientists in the field, and pediatric hematologists/oncologists. Pediatric Psychopharmacology: Principles and Practice is an authoritative and comprehensive text on the use of medication in the treatment of children and adolescents with serious neuropsychiatric disorders. This benchmark volume consists of 56 chapters written by internationally recognized leaders, and is divided into four interrelated sections. The first, Biological Bases of Pediatric Psychopharmacology, reviews key principles of neurobiology and the major psychiatric illnesses of childhood from a perspective rooted in developmental psychopathology. The second, Somatic Interventions, presents the major classes of psychiatric drugs, as well as complementary and alternative somatic interventions, such as electroconvulsive therapy (ECT), transcranial magnetic stimulation (rTMS), and naturopathic approaches. The third and longest section, Assessment and Treatment, starts with clinical assessment, diagnostic evaluation, and comprehensive treatment planning, and goes on to cover the evidence-based analysis of drug treatments for the major disorders. Special populations (such as children with comorbid mental retardation, substance abuse or medical illness) are specifically discussed, and the coordination of their treatment with non-somatic therapies is explicitly addressed. The final section, Epidemiologic, Research, and Methodological Considerations, deals with broad population-relevant topics such as regulation and policy, pharmacoepidemiology, and the critical importance of sound ethical principles for clinical investigation. The book concludes with an appendix on generic and commercial drug name equivalencies, preparations, and available dosages. This timely text is intended for child and adolescent psychiatrists, general and developmental pediatricians, family practitioners, general psychiatrists, and other mental health professionals who work with children and adolescents.

Sleep and Movement Disorders is the second edition of a successful book that was the first of its kind. Since its

publication in 2002, significant progress has been made in our understanding of motor control in sleep and the relationship between sleep and movement disorders. Each editor is an authority on the subject and has assembled expert specialists for their chapter authors. The topic is very timely, the latest edition of the International classification of sleep disorders (ICSD-2, 2005) included a separate category of 'Sleep Related Movement Disorders' emphasizing the increasing awareness of sleep-related movements and the importance of recognizing sleep-related movement disorders for diagnosis, differential diagnosis and treatment. This is a comprehensive resource, including all findings from the last 8 years of research. All the previous chapters have been revised with new materials and references. Several chapters have been added to address recent advances. For instance, new sleep-related disorders have been classified and diagnosed, including catathrenia, alternating leg muscle activation (ALMA), propriospinal myoclonus (PSM) at sleep onset, faciomandibular myoclonus at sleep onset, etc. Further understanding of the pathophysiology of RLS-PLMS is addresses, as is the neurobiology of REM Behavior Disorder (RBD), predictors of neurodegenerative diseases, and so on. Sleep and Movement Disorders is divided into four major sections and subsections preceded by an introductory essay to provide perspective on the subject. The book is intended for all sleep and movement disorders specialists as well as those neurologists, internists including pulmonologists, psychiatrists, psychologists, otolaryngologists, pediatricians, neurosurgeons, dentists and family physicians who must deal with the many patients suffering from undiagnosed or underdiagnosed sleep disorders including sleep-related abnormal movements.

Pediatric patients are a unique subset of emergency patients, making up about one-quarter of all emergency department visits. Textbooks regarding the care of pediatric patients are almost universally organized by organ system, which does not facilitate an efficient diagnosis. Taking a case-based approach, Pediatric Emergency Medicine: Chief Complaints and Differential Diagnosis is arranged by chief complaint, using real patient scenarios to help the reader work through the inductive and deductive reasoning needed to assess, evaluate, treat, and disposition pediatric patients with urgent complaints. Cases are structured in the way in which they are presented during medical care, allowing practitioners to become comfortable with the general structure of case presentations: chief complaint, HPI, PMH, ROS, exam, and ancillary studies. This volume also discusses disease processes and their differentiations, providing in-depth knowledge regarding current standards of diagnosis and care.

Recent advances in neonatal hematology, largely made by the authors of these chapters, are likely to generate wide spread and long-term improvements in outcomes, as well as reductions in costs of care. Publication of these advances in a single volume will facilitate dissemination of these techniques and practices. The advances include neuroprotection from erythropoietic stimulators, improved guidelines for platelet transfusions, evidence-based guidelines for FFP

administration, improved diagnostic methods for genetic causes of severe neonatal jaundice, more accurate definitions of hematological perturbations in necrotizing enterocolitis and sepsis, and reduction in transfusions and in IVH rates by cord milking/delayed clamping.

Key topics in the field of liver transplantation are then addressed. Examples include indications and contraindications, surgical techniques and complications, immunosuppression, in pediatric liver transplantation, acute and chronic rejection and allograft dysfunction, and CMV and EBV infection in transplant recipients, long-term graft injury and tolerance. A section on pediatric hepatology across the world includes chapters presenting the features and management of pediatric liver disease in South-America, Africa and Asia. A closing section considers what the future holds for pediatric liver disease and its management, including novel genetic testing, cell therapy and gene therapy. Pediatric Hepatology and Liver Transplantation will be of value for a range of practitioners, from residents making their first approach to pediatric liver disease through to specialists working in transplantation centers.
