Managing Services is an alternative to the growing service management market in that it is more managerial and procedural, placing less emphasis on quantitative tools and more on strategic concerns. The benefit of this approach is that it views services from the perspective of the general manager rather than the operations specialist. This is important, especially considering most students taking this course aspire to and are preparing for managerial positions.

This book explores the relationship between the changing nature of capitalism and the creation of the new worker. In a changing global economy, work - as the activity that structures individuals in capitalism both socially and psychologically - is being undermined. Combining a Gramscian critique of contemporary patterns of capitalist labour control with Lacanian psychoanalysis, Durand examines what kinds of human beings are emerging in and through modern work, or on its margins. *Creating the New Worker* will be of interest to students and scholars who engage in the sociology and psychology of work, economics, and labour.

With the forces of globalization as a backdrop, this casebook develops labor and employment law in the context of the national laws of nine countries important to the global economy - the US, Canada, Mexico, UK, Germany, France, China, Japan and India. These national jurisdictions are highlighted by considering international labor standards promulgated by the International Labor Organization as well as the rulings and standards that emerge from two very different regional trade arrangements - the labor side accord to NAFTA and the European Union. Across all these different sources of law, this book considers the law of individual employment, collective labor law dealing with unionization as well as the laws against discrimination, the laws protecting privacy and the systems used to resolve labor and employment disputes. This is the first set of law school course materials in English covering international and comparative employment and labor law.

Based on the bestselling Marketing by Baines, Fill, Rosengren, and Antonetti, Fundamentals of Marketing is the most relevant, concise guide to marketing, combining the most essential theories with a global range of practitioner insights. The central premise of Design for Transport is that the designer's role is to approach design for transport from the point of view of the user. People have a collection of wants and needs and a significant proportion of them are to do with their requirements for mobility. The authors show how creative designers can take a user-focused approach for a wide range of types of transport products and systems. In so doing their starting point is one of creative dissatisfaction with what is currently available, and their specialist capability is in imagining and developing new solutions which respond to that opportunity. How this is tackled varies depending on the context, and the variety of solutions produced reflects the different aspirations and needs of the people they are designing for. The chapters cover user needs and transport, design and the transport system, transport design case studies, and the case for the automobile. A conclusion briefly signals what the future for transport design might be. Lavishly illustrated throughout in four-colour, Design for Transport, is an imaginative and rigorous guide to how designers can take a user-centred and socially responsible approach to tackling a range of types of transport, from systems to products and from bicycles to automobiles, demonstrating a rich array of solutions through case studies.

Malgré leur lourd vécu, le commandant Blanco et son adjointe restèrent paralysés par la vision d'horreur. D'une voix proche d'un cri de révolte, la capitaine Linda les avisa fougueusement: "Gardez les mains en l'air et mettez vos sales gueules contre le mur! Je plombe le premier fumier qui bouge !
