Given the amount and complexity of information surrounding the the target specific oral anticoagulants a lengthy didactic educational format has the potential to be overwhelming to the reader and difficult to translate and apply to direct patient care. The proposed book will educate clinicians utilizing a series of clinical cases to simultaneously develop the readers' knowledge base, problem-solving skills, and practically apply their new knowledge to a variety of clinical situations. These will be short focused case presentations that provide critical information and pose questions to the reader at key points in the decision making process. The cases will be relevant to what clinicians will encounter not only on a daily basis, but also reflective of scenarios that clinicians will not encounter regularly, but that they will have to act upon (e.g. a bleeding patient, patient scheduled for elective or emergent procedure, patient with changing renal function, patient on drugs that have a plausible yet unstudied drug interaction with a target specific oral anticoagulant etc). Included in the case studies will be evidence-based discussions (with appropriate references) that provide immediate feedback on the different treatment alternatives that were offered. The case studies will be designed to instruct the reader how to select and effectively utilize the most appropriate agent for a given clinical scenario. They will focus on key features of the target specific oral anticoagulants, what they have in common, how they are unique from each other, as well as illustrating the clinical decision process one should take when selecting an agent or managing a patient already receiving one of the target specific oral agents. ?

Despite the importance of regaining social roles during recovery from mental illness, the intersection between motherhood and serious mental illness is often overlooked. This book aims to rectify that neglect. A series of introductory chapters describing current research and services available to mothers with serious mental illness are followed by personal accounts of clients reflecting on their parenting experiences. One goal of the book is to provide clinicians with information that they can use to help patients struggling with questions and barriers in their attempts to parent. The inclusion of personal accounts of mothers on issues such as stigma, fears and discrimination in the context of parenting with a mental illness is intended to promote the message of mental illness recovery to a larger audience as well. Finally, it is hoped that this handbook will help inspire more research on mothers with mental illness and the creation of more services tailored to their needs.
