Written for calculus-inclusive general chemistry courses, Chemical Principles helps students develop chemical insight by showing the connections between fundamental chemical ideas and their applications. Unlike other texts, it begins with a detailed picture of the atom then builds toward chemistry's frontier, continually demonstrating how to solve problems, think about nature and matter, and visualize chemical concepts as working chemists do. It also offers an exceptional level of support to help students develop their mathematical and problem-solving skills. For the new edition, Chemical Principles now takes a modular approach, with coverage organized as a series of brief Topics within 13 major areas of focus, including a refresher on the fundamentals of chemistry and an online-only section on techniques.

The processing of food generally implies the transformation of the perishable raw food to value-added products. It imparts benefits, such as the destruction of surface microflora, and inactivation of deleterious enzymes, such as peroxidase, leading to a greater shelf life of the food. It also enhances color and texture while maintaining quality of products and makes them edible. However, it also has an inevitable impact on nutritional quality attributes, such as increase or decrease in certain vitamins and bioactive metabolites among others. Food Processing Technologies: Impact on Product Attributes covers a range of food processing technologies and their effect on various food product attributes, such as bioactive compounds, safety, and sensory and nutritional aspects of the food upon processing. There are eight major parts in the book. Part I covers the conventional processing technologies. Parts II, III, IV, and V deal with various novel processing technologies, including impingement processing technologies, electromagnetic processing technologies, physico-mechanical processing technologies, and electro-technologies. Part VI introduces chemical processing technologies. Part VII comprise irradiation processing technology, and the final part is focused on biological processing technology, detailing the application of enzymes in food processing. Numerous studies were carried out to find the impact of these processing technologies on various aspects of food and associated health promotion properties. Both positive and negative results were obtained based on nature of foods, processing type, and duration of processing, and this book covers these results in depth.

On visiting Jim Humble, who treats HIV and Cancer in an African clinic as a cold, I saw the necessity to write down all the practical information that I had made with MMS in my own

environment and in various travels to Mozambique in books, in order to take the barrier away from the sceptics for the use of MMS. Maybe you are one of the people that no longer believe in wonders, due to your illness and long sufferings. This is okay, for although MMS stands for Miracle Mineral Solution," it works naturally and in healing it is nothing extraordinary. In the book "MMS - DISEASES EASY TO CURE," you can read how you can get healthy in the simplest way and live a happy life. In Africa, Jim Humble healed HIV, Cancer and a lot of other diseases within 3 weeks and Malaria within 4 hours. At the same time, I documented my experiences with MMS, Moringa Oleifera and the development of various projects in Africa in the travelogue with lots of beautiful photographs. One part of the profit made by selling the books goes to the projects in Mozambique. All the information about MMS is copyrighted and belongs to Jim Humble as the spiritual father. That's why we pay royalties to Jim Humble and support all his projects.
