Propagation and Reflection of Shock Waves Fedor Vasil'evich Shugaev, L. S. Shtemenko, 1998 This volume deals with the propagation of three-dimensional shock waves and their reflection from curved walls. It is divided into two parts. The first part presents a ray method. This is based on the expansion of fluid properties in power series at an arbitrary point on the shock front. Continuous fractions are used. Results for shock propagation in non-uniform fluids are given. The second part discusses the shock reflection from a concave body. The important shock-focusing problem is included. The work is supported by both numerical and experimental results. Many interesting features, such as formation of a jet, vortices and the appearance of disturbances on the shock front, are discussed. Besides shock waves in gases, the distinctive features of shock propagation through a weakly ionized plasma are considered.

Dreams That Can Save Your Life Larry Burk, Kathleen O'Keefe-Kanavos, 2018-04-17 An exploration of dreams as a spiritual source of healing and inner guidance for your health and well-being • 2018 Nautilus Silver Award • Shares stories--

confirmed by pathology reports--from subjects in medical research projects whose dreams diagnosed illness and helped heal their lives • Explores medical studies and ongoing research on the diagnostic power of precognitive dreams, including Dr. Burk's own medical research • Includes an introduction to dream journaling and interpretation techniques Your dreams can provide inner guidance filled with life-saving information. Since ancient Egypt and Greece, people have relied on the art of dreaming to diagnose illness and get answers to personal life challenges. Now, dreams are making a grand reappearance in the medical arena as recent scientific research and medical pathology reports validate the diagnostic abilities of precognitive dreams. Are we stepping back into the future as modern medical tests show dreams can be early warning signs of cancer and other diseases? Showcasing the important role of dreams and their power to detect and heal illness, Dr. Larry Burk and Kathleen O'Keefe-Kanavos share amazing research and true stories of physical and emotional healings triggered by dreams. The authors explore medical studies and ongoing research on the diagnostic power of precognitive dreams, including Dr. Burk's own research on dreams that come true and can be medically validated. They share detailed stories--all confirmed by pathology reports--from subjects in medical research projects whose dreams diagnosed illness and helped heal their lives, including Kathleen's own story as a three-time breast cancer survivor whose dreams diagnosed her cancer even when it was missed by her doctors. Alongside these stories of survival and faith, the authors also include an introduction to dream journaling and interpretation, allowing the reader to develop trust in their dreams as a spiritual source of healing and inner guidance.

Energy Roger Hinrichs,Merlin H. Kleinbach,2013 What is the impact of such energy issues as global warming, radioactive waste, and municipal solid waste on the individual and society? ENERGY: ITS USES AND THE ENVIRONMENT, 5E, International Edition answers these questions, emphasizing the physical principles behind energy and its effects on our environment, and explaining the basic physical principles behind the use of energy, including the study of mechanics, electricity and magnetism, thermodynamics, and atomic and nuclear physics. By placing energy issues within the context of everyday examples and asking you to define and support critical arguments, ENERGY: ITS USES AND THE ENVIRONMENT, 5E, International Edition offers a provocative approach to this crucial issue.

Make It Stick Peter C. Brown,Henry L. Roediger III,Mark A. McDaniel,2014-04-14 To most of us, learning something the hard way implies wasted time and effort. Good teaching, we believe, should be creatively tailored to the different learning styles of students and should use strategies that make learning easier. Make It Stick turns fashionable ideas like these on

their head. Drawing on recent discoveries in cognitive psychology and other disciplines, the authors offer concrete techniques for becoming more productive learners. Memory plays a central role in our ability to carry out complex cognitive tasks, such as applying knowledge to problems never before encountered and drawing inferences from facts already known. New insights into how memory is encoded, consolidated, and later retrieved have led to a better understanding of how we learn. Grappling with the impediments that make learning challenging leads both to more complex mastery and better retention of what was learned. Many common study habits and practice routines turn out to be counterproductive. Underlining and highlighting, rereading, cramming, and single-minded repetition of new skills create the illusion of mastery, but gains fade quickly. More complex and durable learning come from self-testing, introducing certain difficulties in practice, waiting to re-study new material until a little forgetting has set in, and interleaving the practice of one skill or topic with another. Speaking most urgently to students, teachers, trainers, and athletes, *Make It Stick* will appeal to all those interested in the challenge of lifelong learning and self-improvement.

Assessment of Learning Wynne Harlen, 2007-10-02 This book takes a critical look at how students' achievements are assessed for a range of purposes, from reporting progress to selection and qualification. It considers the relationship between what is taught, and how, and what and how learning outcomes are assessed. The impact of using assessment results for setting targets and evaluation of provision for learning is also discussed. The pros and cons of using tests and examinations and alternatives based on the judgments of teachers are considered in terms of four key criteria: validity, reliability, impact and required resources. Evidence from research and examples of current practice in different countries within and outside the UK support the case for making more and better use of teachers' judgments in assessment of learning. In this way assessment of learning (summative assessment) can be compatible with assessment for learning (formative assessment).

Introducing Quantum Theory J.P. McEvoy, Oscar Zarate, 2014-06-05 Quantum theory confronts us with bizarre paradoxes which contradict the logic of classical physics. At the subatomic level, one particle seems to know what the others are doing, and according to Heisenberg's uncertainty principle, there is a limit on how accurately nature can be observed. And yet the theory is amazingly accurate and widely applied, explaining all of chemistry and most of physics. Introducing Quantum Theory takes us on a step-by-step tour with the key figures, including Planck, Einstein, Bohr, Heisenberg and Schrodinger. Each contributed at least one crucial concept to the theory. The puzzle of the wave-particle duality is here, along with descriptions of the two questions raised against Bohr's Copenhagen Interpretation - the famous dead and alive cat and the EPR paradox. Both remain unresolved.

Media Flight Plan Dennis G. Martin, Robert D. Coons, 2014-05-01 Media Flight Plan was developed in response to the need for affordable media planning simulations in the university classroom. Professional level media planning software ranges in price from hundreds to thousands of dollars. Media Flight Plan, including both the textbook and the online simulation, sells at or below the average price of a used textbook. MFP provides university students' access to not only realistic simulations of planning software, but also includes access to professional syndicated data like MRI, SRDS, Nielsen data, (all by permission) and other syndicated sources that only large corporations and agencies can afford. Besides the online software simulation, the text includes eight chapters that cover basics like basic math models involved in media buying/planning, and exercises that cover calculation of audience ratings, media share, reach and frequency, and gross rating points. Case studies are included for actual Fortune 500 clients. All cases require students to interpret and apply

professional syndicated data and employ the basic methods for writing marketing driven media plans. Both authors, Dennis Martin and Dale Coons, have professional ad agency experience. Coons is executive vice president in a major agency where he directs research, media planning and client development. He is among the most sought-after experts in the field of advertising research. Martin worked on national brands as a copywriter and creative director and co-authored *Strategic Advertising Campaigns*, a national best-seller for Advertising Age's publishing division. Earning his Ph.D. at University of Illinois, he achieved national and international recognition as a professor of marketing communications.

Olaoye is a complementary text to the various textbooks that have been written in the subject area. The book has five sections and twenty six chapters on all the biology topics. This book has become timely in view of the poor results that are being witnessed in the UTME examination especially in the sciences and mathematics, biology inclusive. These majorly are due to poor or inadequate access to good study materials. The topics in each chapter are adequately treated and with clarity. The illustrations are simple but effective. The author has done a lot of work and put in efforts to come out with a very readable and useful text. Effective Teaching of Science Wynne Harlen, 1999 This book reviews the literature on effective science teaching, examining research from the United Kingdom and other countries. The studies included were those that made comparisons between two or more groups differing in science education experiences; those that involved upper elementary or lower secondary students; those that made comparisons in terms of achievement in science or outcomes related to achievement; and those in which innovation was sustainable in normal classrooms. The book focuses on eight aspects of science education that might impact students' achievement but which have received less attention than other aspects (such as gender bias). The book features 10 chapters which include the eight topics: (1) Introduction; (2) The Role of Practical Work; (3) Using Computers; (4) Approaches to Constructivism; (5) Cognitive Acceleration; (6) Assessment; (7) Planning, Questioning, and Using Language; (8) The Curriculum; (9) Teachers' Understanding of Science; and (10) Discussion.
