This book contains 50 fun and exciting projects for PIC microcontrollers such as a laser alarm, USB teasing mouse, egg timer, youth repellent, sound switch, capacitive liquid level gauge, "finger in the water" sensor, guarding a room using a camera, mains light dimmer (110-240 volts), talking microcontroller and much more. You can use this book to build the projects for your own use. The clear explanations, schematics and even pictures of each project make this a fun activity. For each project the theory is discussed and why the project has been executed in that particular way. Several different techniques are discussed such as relay, alternating current control including mains, I2C, SPI, RS232, USB, pulse width modulation, rotary encoder, interrupts, infrared, analogue-digital conversion (and the other way around), 7-segment display and even CAN bus.

John Iovine has created his next masterwork with PIC Projects for Non-Programmers. Engineers and hobbyists new to the PIC who want to create something today will find a valuable resource in this book. By working through the accessible projects in this book, readers will use a symbolic compiler that allows them to create 'code' via flowcharts immediately, getting their projects up and running quickly! The ability to create applications with the PIC from day one makes this a real page turner and a highly satisfying introduction to microcontrollers for both novices and readers who need to build their skills. Gets readers up and running fast with a quick review of basics and then onto ten tried-and-tested projects. No languages to learn: Simply drag and drop the icons, plug in the settings and the PIC will respond to the commands. Step by step guide to using Flowcode 4

Equal parts mail art, data visualization, and affectionate correspondence, *Dear Data* celebrates "the infinitesimal, incomplete, imperfect, yet exquisitely human details of life," in the words of Maria Popova (*Brain Pickings*), who introduces this charming and graphically powerful book. For one year, Giorgia Lupi, an Italian living in New York, and Stefanie Posavec, an American in London, mapped the particulars of their daily lives as a series of hand-drawn postcards they exchanged via mail weekly—small portraits as full of emotion as they are data, both mundane and magical. *Dear Data* reproduces in pinpoint detail the full year's set of cards, front and back, providing a remarkable portrait of two artists connected by their attention to the details of their lives—including complaints, distractions, phone addictions, physical contact, and desires. These details illuminate the lives of two remarkable young women and also inspire us to map our own lives, including specific suggestions on what data to draw and how. A captivating and unique book for designers, artists, correspondents, friends, and lovers everywhere.

The federal government wastes your tax dollars worse than a drunken sailor on shore leave. The 1984 Grace Commission uncovered that the Department of Defense spent \$640 for a toilet seat and \$436 for a hammer. Twenty years later things weren't much better. In 2004, Congress spent a record-breaking \$22.9 billion dollars of your money on 10,656 of their pork-barrel projects. The war on terror has a lot to do with the record \$413 billion in deficit spending, but it's also the result of pork over the last 18 years the likes of: - \$50 million for an indoor rain forest in Iowa - \$102 million to study screwworms which were long ago eradicated from American soil - \$273,000 to combat goth culture in Missouri - \$2.2 million to renovate the North Pole (Lucky for Santa!) - \$50,000 for a tattoo removal program in California - \$1 million for ornamental fish research Funny in some instances and jaw-droppingly stupid and wasteful in others, *The Pig Book*

proves one thing about Capitol Hill: pork is king!

“This book made me happy in the first five pages.” —AJ Jacobs, author of *The Year of Living Biblically: One Man's Humble Quest to Follow the Bible as Literally as Possible* Award-winning author Gretchen Rubin is back with a bang, with *The Happiness Project*. The author of the bestselling *40 Ways to Look at Winston Churchill* has produced a work that is “a cross between the Dalai Lama’s *The Art of Happiness* and Elizabeth Gilbert’s *Eat, Pray, Love*.” (Sonya Lyubomirsky, author of *The How of Happiness: A Scientific Approach to Getting the Life You Want*) In the vein of *Julie and Julia*, *The Happiness Project* describes one person’s year-long attempt to discover what leads to true contentment. Drawing at once on cutting-edge science, classical philosophy, and real-world applicability, Rubin has written an engaging, eminently relatable chronicle of transformation.

Easy to learn, portable, and lots of fun--that's weaving on peg looms and weaving sticks! This book introduces you to the craft and answers all of your questions.

In this very distinctive book, *Images of Projects* challenges how we think about projects in the most fundamental way: it rejects outright the idea of a one 'best way' to view all projects and also the idea of following a prescriptive approach. In contrast, *Images of Projects* seeks to encourage a more pragmatic and reflective approach, based on deliberately seeing projects from multiple perspectives, exploring the insights and implications which flow from these, and crafting appropriate action strategies in complex situations. Based on real examples and the authors' work over the last ten years, *Images of Projects* presents seven pragmatic images for making sense of the complex realities of projects. Illustrated using various models, these images are presented in ways that allow the reader to reflect upon their own mental models in relation to the different perspectives in this book.

"An audacious and concrete proposal...Half-Earth completes the 86-year-old Wilson's valedictory trilogy on the human animal and our place on the planet." —Jedediah Purdy, *New Republic* In his most urgent book to date, Pulitzer Prize-winning author and world-renowned biologist Edward O. Wilson states that in order to stave off the mass extinction of species, including our own, we must move swiftly to preserve the biodiversity of our planet. In this "visionary blueprint for saving the planet" (Stephen Greenblatt), Half-Earth argues that the situation facing us is too large to be solved piecemeal and proposes a solution commensurate with the magnitude of the problem: dedicate fully half the surface of the Earth to nature. Identifying actual regions of the planet that can still be reclaimed—such as the California redwood forest, the Amazon River basin, and grasslands of the Serengeti, among others—Wilson puts aside the prevailing pessimism of our times and "speaks with a humane eloquence which calls to us all" (Oliver Sacks).

PIC BASIC is the simplest and quickest way to get up and running - designing and building circuits using a microcontroller. Dogan Ibrahim's approach is firmly based in practical applications and project work, making this a toolkit rather than a programming guide. No previous experience with microcontrollers is assumed - the PIC family of microcontrollers, and in particular the popular reprogrammable 16X84 device, are introduced from scratch. The BASIC language, as used by the most popular PIC compilers, is also introduced from square one, with a simple code used to illustrate each of the most commonly used instructions. The practicalities of programming and the scope of using a PIC are then explored through 22 wide ranging electronics projects. The simplest quickest way to get up and running with microcontrollers Makes the PIC accessible to students and enthusiasts Project work is at the heart of the book - this is not a BASIC primer.

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Loom knitting--the art of creating woven fabric using pegs and a hook instead of traditional knitting needles--is quicker and easier on the hands than knitting, but the results are just as lovely! The easy-to-follow lessons in this book start with the basics and progress to more complex techniques--an invaluable visual reference for loom knitters of all levels.
