Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.

During his 45th year of life "A singular voice in cinema," (Movies in Focus) and "One of genre's most exciting filmmakers" (Indiewire) decided to make a comic book. After the release of three startling, award-winning movies that have played

around the world and been added to the permanent collection of the Museum of Modern Art, S. Craig Zahler wanted to return to his first artistic passion--illustration. With tools that he had developed as a director, screenwriter, cinematographer, novelist, and songwriter, he committed himself to writing, drawing, inking, and lettering his graphic novel debut, a full-length work of noir horror entitled, *Forbidden Surgeries of the Hideous Dr. Divinus*. Here's the setup... Homeless people are disappearing in New Bastion, and occasionally, a dismantled corpse turns up in a dumpster. These crimes are left alone, until the day a comatose woman named Lillian Driscoll is kidnapped from the hospital. Her brothers--a grumpy detective named Leo and a slick mobster named Tommy--seek answers that lead them to darkness, arcane medicine, and pain. Fans of *Bone Tomahawk* (recently named best film of the decade by Conan O'Brien) will enjoy Zahler's return to the supernatural, and the idiosyncratic, tough guy dialogue found in his crime pictures *Dragged Across Concrete* and *Brawl in Cell Block 99* (both of which premiered at the Venice Film Festival) is also present in this starkly rendered, black-and-white graphic novel, a stylistic confluence of pre-code horror, vintage comic strip, and modern indie art styles. Sir William Temple, diplomat, statesman, and writer, retired to his garden in the 1680s and wrote what has become one of the key texts, not only of gardening, but also of the English

aesthetic. It was he who introduced the idea of the charm of irregularity, and who gave it the allegedly Chinese name sharawaggi. The English style of landscape gardening can be traced in a direct line to this essay, which has not been in print for over 95 years.

"Ceramic and Metal Matrix Composites" provide an update on this field, and identifies new problem areas. Newcomers will find that it provides a sound basis for learning how inorganic matrix composite materials are made and how they behave. Volume is indexed by Thomson Reuters CPCI-S (WoS). A total of 148 articles cover practically every area of current interest within the ambit of CMCs and MMCs.

Discusses the nature of revelation as doctrine, history, and inner experience, and examines its relationship to the Bible, eschatology, and other religions

How the Body Shapes the Mind is an interdisciplinary work that addresses philosophical questions by appealing to evidence found in experimental psychology, neuroscience, studies of pathologies, and developmental psychology. There is a growing consensus across these disciplines that the contribution of embodiment to cognition is inescapable. Because this insight has been developed across a variety of disciplines, however, there is still a need to develop a common vocabulary that is capable of integrating discussions of brain mechanisms in neuroscience, behavioural expressions in psychology, design concerns in artificial intelligence and robotics, and debates about embodied experience in the phenomenology and philosophy of mind. Shaun Gallagher's book aims to contribute to the formulation of that common vocabulary and to develop a conceptual framework that will avoid both the overly reductionistic approaches that explain everything in terms of bottom-up neuronal mechanisms, and inflationistic approaches that explain everything in terms of Cartesian, top-down cognitive

states. Gallagher pursues two basic sets of questions. The first set consists of questions about the phenomenal aspects of the structure of experience, and specifically the relatively regular and constant features that we find in the content of our experience. If throughout conscious experience there is a constant reference to one's own body, even if this is a recessive or marginal awareness, then that reference constitutes a structural feature of the phenomenal field of consciousness, part of a framework that is likely to determine or influence all other aspects of experience. The second set of questions concerns aspects of the structure of experience that are more hidden, those that may be more difficult to get at because they happen before we know it. They do not normally enter into the content of experience in an explicit way, and are often inaccessible to reflective consciousness. To what extent, and in what ways, are consciousness and cognitive processes, which include experiences related to perception, memory, imagination, belief, judgement, and so forth, shaped or structured by the fact that they are embodied in this way?

This book covers all the factors any ceramic artist should consider when going "green" including: fuels and alternative firing technology; sustainable ways to collect and use clay; ways to deal with waste materials and save water; simple and achievable methods by which to reduce the carbon footprint of ceramic art; and examples of practitioners who reclaim, reuse and recycle in their work.

Harvard Professor Jonathan Weber is finally enjoying a season of peace when a shocking discovery thrusts him into the national spotlight once again. While touring monasteries in Greece, Jon and his wife Shannon—a seasoned archaeologist—uncover an ancient biblical manuscript containing the lost ending of Mark and an additional book of the Bible. If proven

authentic, the codex could forever change the way the world views the holy Word of God. As Jon and Shannon work to validate their find, it soon becomes clear that there are powerful forces who don't want the codex to go public. When it's stolen en route to America, Jon and Shannon are swept into a deadly race to find the manuscript and confirm its authenticity before it's lost forever.

Anand Kumar, a mathematics prodigy, defied all challenges to set up one of the most successful and innovative teaching initiatives in the world—Super 30. Born in Chandipur Bela, Patna, Anand secured a place in Cambridge University but couldn't attend because he had no money and sold papads in the evenings instead. He dealt with his own disappointment by setting up an innovative school in 2002 to prepare underprivileged students for the IIT JEE examination. Super 30 has an astonishing success rate and on an average, twenty-seven to twenty-eight of the thirty students crack the exam every year. Stirring and heart-wrenching, this is the extraordinary story of a visionary who has elevated these bright sparks and, through education, given them hope to rise above crippling poverty.
