The Innovation Manual provides a solution to the problems faced by those at the forefront of innovation. It takes you through the seven topics that have the highest impact on the success of value innovation, be this innovation a new product, a new service or a new business model. The seven topics are: - Creating advantage in the minds of many - Chartering innovation within the organization - Preparing, developing and supporting the right team - Placing customers at the centre of innovation - Changing the organization to deliver the innovation - Motivating the right partners and sharing the returns - Building momentum in the market Each topic is linked to an organized toolkit that allows managers to apply this knowledge immediately. The tools sit within an overall framework to show how they build on and reinforce one another. Along with this, the book guides busy managers on applying the tools properly, detailing the relevance of each for specific industries, and how to customize them when necessary.

This book consists of papers presented at AUTOMATION2019, an international conference held in Warsaw from March 27 to 29, 2019. It discusses the radical technological changes occurring due to the INDUSTRY 4.0. To follow these

changes, both scientists and engineers have to face the challenge of interdisciplinary approach directed at the development of cyber-physical systems. This approach encompasses interdisciplinary theoretical knowledge, numerical modelling and simulation as well as application of artificial intelligence techniques. Both software and physical devices are composed into systems that will increase production efficiency and resource savings. The theoretical results, practical solutions and guidelines presented are valuable for both researchers working in the area of engineering sciences and practitioners looking for solutions to industrial problems.

This volume presents the 17th International Conference on Information Technology—New Generations (ITNG), and chronicles an annual event on state of the art technologies for digital information and communications. The application of advanced information technology to such domains as astronomy, biology, education, geosciences, security, and healthcare are among the themes explored by the ITNG proceedings. Visionary ideas, theoretical and experimental results, as well as prototypes, designs, and tools that help information flow to end users are of special interest. Specific topics include Machine Learning, Robotics, High Performance Computing, and Innovative Methods of Computing. The conference features keynote speakers; a best student contribution award, poster

book shows you how to get the most out of your new Apple iPhone. The name iPhone may be doing Apple a disservice. This machine is so packed with possibilities that the cellphone may actually be the least interesting part. The iPhone is at least three products merged into one: a phone, a wide-screen iPod and a wireless, touch-screen Internet communicator. The iPhone's beauty alone may be enough for you to dig for your credit cards, but its Mac OS X-based software makes it not so much a smartphone as something out of the film "Minority Report." The real magic, however, awaits when you browse the Web. You get to see the entire Web page on the iPhone's screen. All of this is cooked up with Apple's traditional secret sauce of simplicity, intelligence and whimsy. Written by New York Times columnist and Missing Manual series creator David Pogue, iPhone: The Missing Manual shows you everything they need to know to get the most out of your new Apple iPhone. Full of humor, tips, tricks, and surprises, this book teaches you how to extend iPhone's usefulness by exploiting its links to the Web as well as its connection to Macs or PCs; how to save money using Internet-based messages instead of phone calls; and how to fill the iPhone with TV shows and DVDs for free.

Since the internet speeds went above the 500kbps mark, the number of things people can do with their interconnected devices skyrocketed. Automated homes, connected cars, and internet enabled TVs. The latter is what threatens to revolutionize the entertainment world as we know it, do away with cable TV and abolish the need for expensive blue-ray players. Even though smart TVs are so lucrative, most people find them either too costly, or limiting. The alternative would be going for a TV with an HDMI port, a USB port and purchasing a dongle to bring in the power of internet TV. Chromecast is one of the best and cheapest such tools in the market.

Defense forces have always invested a great deal of their resources in training. In recent times, changes in the complexity and intensity of operations have reaffirmed the importance of ensuring that warfighters are adequately prepared for the environments in which they are required to work. The emergence of new operational drivers such as asymmetric threats, urban operations, joint and coalition operations and the widespread use of military communications and information technology networks has highlighted the importance of providing warfighters with the competencies required to act in a coordinated, adaptable fashion, and to make effective decisions in environments characterized by large amounts of sometimes ambiguous information. While investment in new technologies can make available new opportunities for action, it is only through effective training that personnel can be made ready to apply their tools in the most decisive and discriminating fashion. There are many factors which can have an impact

on the efficacy of training and many issues to consider when designing and implementing training strategies. These issues are often complex and nuanced, and in order to grasp them fully a significant investment of time and energy is required. However, the requirement to respond quickly to ever-changing technology, a high operational tempo and minimal staffing may preclude many in today's defense forces from seeking out all such resources on their own. This edited collection provides brief, easy-to-understand summaries of the key issues in defense training and simulation, as well as guidance for further reading. It consists of a collection of short essays, each of which addresses a fundamental issue in defense training and simulation, and features an up-to-date reference list to enable the reader to undertake further investigation of the issues addressed. In essence, this book provides the optimum starting point, or first resource, for readers to come to terms with the important issues associated with defense training and simulation. The contributions are written by leading scholars from military research institutions in the US, UK, Canada, Australia and New Zealand, as well as selected researchers from academic and private sector research institutions. This book constitutes the thoroughly refereed proceedings of the Third International Conference on Cloud Computing and Services Science, CLOSER 2013, held in Aachen, Germany, in May 2013. The 8 papers presented were selected from 142 paper submissions. The papers cover the following topics: cloud computing fundamentals; services science foundations for cloud computing; cloud computing platforms and

Understanding the cost ramifications of design, manufacturing and life-cycle management decisions is of central importance to businesses associated with all types of electronic systems. Cost Analysis of Electronic Systems contains carefully developed models and theory that practicing engineers can directly apply to the modeling of costs for real products and systems. In addition, this book brings to light and models many contributions to life-cycle costs that practitioners are aware of but never had the tools or techniques to address quantitatively in the past. Cost Analysis of Electronic Systems melds elements of traditional engineering economics with manufacturing process and life-cycle cost management concepts to form a practical foundation for predicting the cost of electronic products and systems. Various manufacturing cost analysis methods are addressed including: process-flow, parametric, cost of ownership, and activity-based costing. The effects of learning curves, data uncertainty, test and rework processes, and defects are considered. Aspects of system sustainment and life-cycle cost modeling including reliability (warranty, burn-in), maintenance (sparing and availability), and obsolescence are treated. Finally, total cost of ownership of systems and return on investment are addressed. Real life design scenarios from integrated circuit fabrication, electronic systems assembly, substrate fabrication, and electronic systems management are used as examples of the application of the cost estimation methods developed within the book. Features:Engineering economics treats the analysis of the economic effects of engineering decisions and is often identified with capital allocation problems.

Engineering economics provides a rigorous methodology for comparing investment or disinvestment alternatives that includes: time value of money, equivalence, present and future value, rate of return, depreciation, break-even analysis, cash flow, inflation, taxes, etc. While it would be wrong to state that this book is not an engineering economics book (it is), this book focuses on the detailed cost modeling necessary to support engineering economic analyses with the inputs it requires for making investment decisions. However, while traditional engineering economics is focused on the financial aspects of cost, cost modeling concerns itself with modeling the processes and activities associated with the manufacturing and support of products and
