Esthetics in Dentistry has been an important resource in the practice of general dentistry and orthodontics for more than a quarter century. This full-colour revision of the original classic contains an incredible number of advances in techniques and materials. Dr. Ronald Goldstein presents the principles, communication techniques and treatment methods for selecting patients and creating esthetic restorations. Treatments include cosmetic contouring, bleaching, bonding, etched porcelain restorations and crown restorations. It is explained how digital smile design in conjunction with a wax-up and functional esthetic prototype allow a patient to visualize the possibilities. Occlusion prior to the initiation of treatment and following treatment is key to the longevity of restorations, and this aspect is given careful consideration. Detailed advice is also offered on proper selection of materials and their placement. The guidance provided will ensure that the reader is fully equipped to gather and assess all relevant information prior to commencement of the final treatment. The treatment itself can range from minimally invasive to more complex depending on the requirements of each individual case.
