The digitization of healthcare has become almost ubiquitous in recent years, spreading from healthcare organizations into the homes and personal appliances of practically every citizen. Thanks to the collective efforts of health professionals, patients and care providers as well as systems developers and researchers, the entire population of Europe is able to participate in and enjoy the benefits of digitized health information. This book presents the proceedings of the 26th Medical Informatics in Europe Conference (MIE2015), held in Madrid, Spain, in May 2015. The conference brings together participants who share their latest achievements in biomedical and health Informatics, including the role of the user in digital healthcare, and provides a forum for discussion of the inherent challenges to design and adequately deploy ICT tools, the assessment of health IT interventions, the training of users and the exploitation of available information and knowledge to further the continuous and ubiquitous availability and interoperability of medical information systems. Contributions address methodologies and applications, success stories and lessons learned as well as an overview of on-going projects and directions for the future. The book will be of interest to all those involved in the development, delivery and consumption of health and care information.

The International Conference on Informatics and Management Science (IMS) 2012 will be held on November 16-19, 2012, in Chongqing, China, which is organized by Chongqing Normal University, Chongqing University, Shanghai Jiao Tong University, Nanyang Technological University, University of Michigan, Chongqing University of Arts and Sciences, and sponsored by National Natural Science Foundation of China (NSFC). The objective of IMS 2012 is to facilitate an exchange of information on best practices for the latest research advances in a range of areas. Informatics and Management Science contains over 600 contributions to suggest and inspire solutions and methods drawing from multiple disciplines including: · Computer Science · Communications and Electrical Engineering · Management Science · Service Science · Business Intelligence

This book covers the new EDPM CSEC syllabus to be taught from September 2011. It introduces computing fundamentals, electronic communication and keyboarding techniques before teaching the Microsoft Office (2003 - 2010) skills required by the course. Next, students are shown several aspects of document preparation, complete with sample documents. After covering document management and ethics, it gives SBA tips and exam papers (with answers included on the CD). Exercises and summaries are found at the end of each chapter. The accompanying CD-ROM is packed with material including interactive revision questions, PowerPoint presentations, tutorial videos, exercise files and a comprehensive glossary.

Students who are beginning studies in technology need a strong foundation in the basics before moving on to more advanced technology courses and

certification programs. The Microsoft Technology Associate (MTA) is a new and innovative certification track designed to provide a pathway for future success in technology courses and careers. The MTA program curriculum helps instructors teach and validate fundamental technology concepts and provides students with a foundation for their careers as well as the confidence they need to succeed in advanced studies. Through the use of MOAC MTA titles you can help ensure your students future success in and out of the classroom. This text covers fundamental skills in such areas as Programming and an understanding of general software development, web, desktop, and database applications. Widely considered one of the best practical guides to programming, Steve McConnell's original CODE COMPLETE has been helping developers write better software for more than a decade. Now this classic book has been fully updated and revised with leading-edge practices—and hundreds of new code samples—illustrating the art and science of software construction. Capturing the body of knowledge available from research, academia, and everyday commercial practice, McConnell synthesizes the most effective techniques and must-know principles into clear, pragmatic guidance. No matter what your experience level, development environment, or project size, this book will inform and stimulate your thinking—and help you build the highest quality code. Discover the timeless techniques and strategies that help you: Design for minimum complexity and maximum creativity Reap the benefits of collaborative development Apply defensive programming techniques to reduce and flush out errors Exploit opportunities to refactor—or evolve—code, and do it safely Use construction practices that are right-weight for your project Debug problems quickly and effectively Resolve critical construction issues early and correctly Build quality into the beginning, middle, and end of your project

Dedicated to the vision of Prof. Alejandro Buchmann, this collection of work illuminates various facets of data management and reflects the development of the field from its early association with database systems through to today's wide-ranging applications. This book reflects the real truth about South Africa today, what people can't tell others and what can't be said. Today SA is perceived and presented as a holy country that came from evil, which is not true since most people are suffering while leadership fails them. br> This is a book that refers to certain events and issues and compare, relate with honesty the position of the author around such events and issues. It talks of how the author sees the system, areas of governance and how it is done and he goes deep inside of identifying some of those who are at the top and their questionable acts. Government departments fail and are protected to

undermine ordinary people intelligence. br> br> This book raises certain issues by taking your mind into an ordinary South African who lives where he is directly affected by the failures of governance because of corruption and power struggle by leadership. The author goes to the level of going into how certain leaders failed the public on executing their duties. br> br> This is not the book that will interest those who follow politics only; it goes further by introducing different topics and how they are mishandled by leaders. For a moment it goes into the ANC leadership and ANC as a political party to see and analyze real issues within. The author presents the view of controversial Julius Malema, and surprisingly presents the side that the media never presented. br> br> The book refers to various topics like politics, the media, traditional communities-laws and practice, the gap between the rich and the poor, xenophobia and many more. The most amazing and interesting angle of traditional communities presented through what is happening in the Bakwena Ba Mogopa Traditional Community who are rich in natural resources. br> br> He observed the most and critical systems that are not benefiting the people, and raising them as a black man with real references since his observation registered whites critics only, and differently present other issues around Land Restitution Corruption/Failures and Government strategy of undermining the rural leadership/communities etc. br> br> SA has been presented as a media free society, where media has freedom to report on different issues and no other platform seems to be there to criticize the media unless if the media itself open a limited debate along its criticism, this book criticizes the media. br> br> Touching on Broad Based Black Economic Empowerment (BBBEE) and its effect, this time it brings a different angle! Be presented with different laws and simple interpretations and how leadership is failing to observe them. br> br> This is a book that everybody needs to have because it is simple and was written to present complex issues differently. You will see as you go by it that ordinary South Africans are being disrespected by leaders and all is not good in SA. br> br> The author has presented views and questions that needs to identify real challenges that SA faces. Why people are so afraid of criticizing the ANC, the media, government and many powerful factors that lead us? This is a book that will bring a good debate to fix some of the problems in SA.

"Practical Skills in Biomolecular Sciences""" Laboratory and field studies are essential components of undergraduate training in the life sciences. Practical work must be fully understood and effectively presented, but many students under-perform because they lack basic laboratory skills. This book, now in its second edition, continues to provide students with easy-to-use guidance for laboratory and field studies, but in addition it now covers broader transferable skills. As a result the new edition provides guidance and support over the entire range of a typical undergraduate courses in biomolecular sciences. "New features for the second edition " A new section at the front of the book on Study and Examination skills, including new chapters on time management, working with others, note taking, revising, assessment and exams, and preparing a "cv." New chapters on bioinformatics and on the preparation and use of calibration curves. Updated material on the use of the Internet and World Wide Web. New material on evaluating information A a vital skill for todayAs students. New material in the numeracy and statistics chapters to provide greater support and guidance. Every chapter has study exercises to reinforce learning with problems and practical exercises. Answers are given at the back of the book for all exercises. Every chapter is supported by a section giving printed and electronic sources for further study. " Retained features from previous edition " Worked examples and "how to" boxes that set out the essential procedures in a step-by-step manner. Key points highlighting critical features of methodology. Use of margin tips, definitions and illustrations. Use of two-colour text throughout the book. Practical Skills in Biomolecular Sciences is an indispensable book for undergraduate students in a range of subjects including biochemistry, genetics, molecular biology and biomedical sciences. It is also a valuable resource for teachers of these subjects in colleges and secondary schools.

These are the proceedings of Eurocrypt 2010, the 29th in the series of Eu- pean conferences on the Theory and Application of Cryptographic Techniques. The conference was sponsored by the International Association for Cryptologic Research and held on the French Riviera, May 30–June 3, 2010. A total of 191 papers were received of which 188 were retained as valid submissions. These were each assigned to at least three Program Committee members and a total of

606 review reports were produced. The printed record of the reviews and extensive online discussions that followed would be almost as voluminous as these proceedings. In the end 35 submissions were accepted with twosubmissionpairsbeingmergedtogive33paperspresentedattheconference. The ?nal papers in these proceedings were not subject to a second review before publication and the authors are responsible for their contents. The ProgramCommittee, listed on the next page, deservesparticular thanks for all their hard work, their outstanding expertise, and their constant c- mitment to all aspects of the evaluation process. These thanks are of course extended to the very many external reviewers who took the time to help out during the evaluation process.It was also a greatpleasure to honor and welcome Moti Yung who gave the 2010 IACR Distinguished Lecture.

This is the first EU competition law treatise that fully integrates economic reasoning in its treatment of the decisional practice of the European Commission and the case-law of the European Court of Justice. Since the European

Commission's move to a "more economic approach" to competition law reasoning and decisional practice, the use of economic argument in competition law cases has become a stricter requirement. Many national competition authorities are also increasingly moving away from a legalistic analysis of a firm's conduct to an effect-based analysis of such conduct, indeed most competition cases today involve teams composed of lawyers and industrial organisation economists. Competition law books tend to have either only cursory coverage of economics, have separate sections on economics, or indeed are far too technical in the level of economic understanding they assume. Ensuring a genuinely integrated approach to legal and economic analysis, this major new work is written by a team combining the widely recognised expertise of two competition law practitioners and a prominent economic consultant. The book contains economic reasoning throughout in accessible form, and, more pertinently for practitioners, examines economics in the light of how it is used and put to effect in the courts and decision-making institutions of the EU. A general introductory section sets EU competition law in its historical context. The second chapter goes on to explore the economics foundations of EU competition law. What follows then is an integrated treatment of each of the core substantive areas of EU competition law, including Article 101 TFEU, Article 102 TFEU, mergers, cartels and other horizontal agreements and vertical restraints.

Education in South Asia and the Indian Ocean Islands is a critical reference guide to development of education in Bangladesh, Bhutan, India, Nepal, Sri Lanka, Comoros Islands, Maldives, Mauritius, Seychelles and Zanzibar. The chapters provide an overview of the education system in each country, focusing particularly on contemporary education policies and some of the problems countries in this region face during the processes of development. Key themes include the practice of implementation of educational policy and the impact of global and local educational decisions on societies. Due to the demographic scale and the cultural diversity of India, the volume contains a particularly extensive coverage of the distinctive educational issues in this country. Including a comparative introduction to the issues facing education in the region as a whole, this book is an essential reference for researchers, scholars, international agencies and policy-makers.

This six-volume-set (CCIS 231, 232, 233, 234, 235, 236) constitutes the refereed proceedings of the International Conference on Computing, Information and Control, ICCIC 2011, held in Wuhan, China, in September 2011. The papers are organized in two volumes on Innovative Computing and Information (CCIS 231 and 232), two volumes on Computing and Intelligent Systems (CCIS 233 and 234), and in two volumes on Information and Management Engineering (CCIS 235 and 236).

Statistics are just as vital to understanding political science as the study of institutions, but getting students to understand them when teaching a methods course can be a big challenge. In Statistics for Political Analysis, author Theresa Marchant-Shapiro makes understanding the numbers easy. The only introduction to statistics book written specifically for political science undergraduates, this book explains each statistical concept in plain language—from basic univariate statistics and the basic measures of association to bivariate and multivariate regression—and uses real world political examples. Students learn the relevance of statistics to political science, how to understand and calculate statistics mathematically, and how to obtain them using SPSS. All calculations are modeled step-by-step, giving students needed practice to master the process without making it intimidating. Each chapter concludes with exercises that get students actively applying the steps and building their professional skills through data calculation, analysis, and memo writing.

These conference proceedings showcase a rich and practical exchange of approaches and vital evidence-based practices taking place around the world. They clarify the complex challenges involved in bringing about a holistic educational environment in schools and institutes of higher learning that fosters greater understanding and offer valuable insights on how to avoid the pitfalls that come with rolling out holistic approaches to education. To do so, the proceedings focus on the subthemes Support and Development, Mobility and Diversity and Networking and Collaboration in Holistic Education.

This book constitutes the refereed proceedings of the 24th IFIP TC 11 International Information Security Conference, SEC 2009, held in Pafos, Cyprus, in May 2009. The 38 revised full papers presented were carefully reviewed and selected from 176 submissions. The papers are organized in topical sections on identification and authentication, threats and attacks, applications of cryptography and information hiding, trusted computing, security policies, validation, verification and evaluation, privacy protection and security assessment, role mining and content protection, security protocols, access control, and internet and Web applications security.

In 2001 AFIHM and the British HCI Group combined their annual conferences, bringing together the best features of each organisation's separate conference series, and providing a special opportunity for the French- and English-speaking HCI communities to interact. This volume contains the full papers presented at IHM-HCI 2001, the 15th annual conference of the British HCI group, a specialist group of the British Computer Society and the 14th annual conference of the Association Francophone d'interaction Homme-Machine, an independent association for any French-speaking person who is interested in Human-Computer Interaction. Human-Computer Interaction is a discipline well-suited to such a multi-linguistic and multi-cultural conference since it brings together researchers and practitioners from a variety of disciplines with very different ways of thinking and working. As a community we are already used to tackling the challenges of working across such boundaries, dealing with the problems

and taking advantage of the richness of the resulting insights: interaction without frontiers. The papers presented in this volume cover all the main areas of HCI research, but also focus on considering the challenges of new applications addressing the following themes: - Enriching HCI by crossing national, linguistic and cultural boundaries; - Achieving greater co-operation between disciplines to deliver usable, useful and exciting design solutions; - Benefiting from experience gained in other application areas; - Transcending interaction constraints through the use of novel technologies; - Supporting mobile users.

Do the antitrust laws have a place in the digital economy or are they obsolete? That is the question raised by the government's legal action against Microsoft, and it is the question this volume is designed to answer. America's antitrust laws were born out of the Industrial Revolution. Opponents of the antitrust laws argue that whatever merit the antitrust laws may have had in the past they have no place in a digital economy. Rapid innovation makes the accumulation of market power practically impossible. Markets change too quickly for antitrust actions to keep up. And antitrust remedies are inevitably regulatory and hence threaten to `regulate business'. A different view - and, generally, the view presented in this volume - is that antitrust law can and does have an important and constructive role to play in the digital economy. The software business is new, it is complex, and it is rapidly moving. Analysis of market definition, contestibility and potential competition, the role of innovation, network externalities, cost structures and marketing channels present challenges for academics, policymakers and judges alike. Evaluating consumer harm is problematic. Distinguishing between illegal conduct and brutal - but legitimate - competition is often difficult. Is antitrust analysis up to the challenge? This volume suggests that antitrust analysis `still works'. In stark contrast to the political rhetoric that has surrounded much of the debate over the Microsoft case, the articles presented here suggest neither that Microsoft is inherently bad, nor that it deserves a de facto exemption from the antitrust laws. Instead, they offer insights - for policymakers, courts, practitioners, professors and students of antitrust policy everywhere - on how antitrust analysis can be applied to the business of making and marketing computer software.
