Caste, as it is experienced in everyday life, is the pièce de résistance of this book. Thirty-two voices narrate how from childhood to adulthood, caste intruded upon their lives—food, clothes, games, gait, love, marriage and every aspect of one's existence including death. Like the editor Perumal Murugan says, caste is like god, it is omnipresent. The contributors write about the myriad ways in which they have experienced caste. It may be in the form of forgoing certain kinds of food, or eating food at secluded corners of a household, or drinking tea out of a crushed plastic cup, or drinking black coffee in a coconut shell or water poured from above into a cupped hand. Such experiences may also take the form of forbidden streets, friends disapproved of and love denied. And when one leaves behind the fear of caste while living one's life, there is still death to deal with.

Expanded coverage of implant prosthodontics addresses the clinical protocols for implant-retained and implant-supported prosthodontic management. Specific chapters address the three surfaces of the complete denture: (1) an impression or intaglio surface, (2) a polished surface, and (3) an occlusal surface, the integration of which is crucial to creating a stable, functional, and esthetic result. Chapter on health and nutrition examines a number of systemic conditions (vesciculoerosive conditions, systemic lupus erythematosus, burning mouth syndrome, salivary dysfunction, Sjögren's syndrome, hyper/hyposalivation, diabetes) that affect the oral cavity and specifically influence the prognosis for wearing complete dentures or for accepting osseointegrated protheses. Chapter on the time-dependent changes which occur in the oral cavity focuses on both time-related direct (ulcer/cheek biting, irritation hyperplasia, denture stomatitis, flabby ridge and pendulous maxillary tuberosities, hyperkeratosis and oral cancer, residual ridge reduction) and indirect (atrophy of masticatory muscles, nutritional status and masticatory function, control of sequelae) changes in the oral environment, and provides strategies to minimize the risk of such changes. Chapter on the techniques used to prolong the life of complete dentures focuses on the two techniques used to extend the life of dentures: relining and rebasing, also touching on denture duplication.
