This book presents, in a concise but rigorous way, the important statistical tools and methods essential for today's complex, data-driven evaluation processes.

This book has won the <I>CHOICE Outstanding Academic Title award 2014.

 A century of education and education reform along with the last three decades of high-stakes testing and accountability reveals a disturbing paradox: Education has a steadfast commitment to testing and grading despite decades of research, theory, and philosophy that reveal the corrosive consequences of both testing and grading within an education system designed to support human agency and democratic principles.
 This edited volume brings together a collection of essays that confronts the failure of testing and grading and then offers practical and detailed examinations of implementing at the macro and micro levels of education teaching and learning free of the weight of testing and grading. The book explores the historical failure of testing and grading; the theoretical and philosophical arguments against testing and grading; the negative influence of testing and grading on social justice, race, class, and gender; and the role of testing and grading in perpetuating a deficit perspective of children, learning, race, and class.
 The chapters fall under two

live. Now Brooks turns to the building blocks of human flourishing in a multilayered, profoundly illuminating work grounded in everyday life. This is the story of how success happens, told through the lives of one composite American couple, Harold and Erica. Drawing on a wealth of current research from numerous disciplines, Brooks takes Harold and Erica from infancy to old age, illustrating a fundamental new understanding of human nature along the way: The unconscious mind, it turns out, is not a dark, vestigial place, but a creative one, where most of the brain's work gets done. This is the realm where character is formed and where our most important life decisions are made—the natural habitat of *The Social Animal*. Brooks reveals the deeply social aspect of our minds and exposes the bias in modern culture that overemphasizes rationalism, individualism, and IQ. He demolishes conventional definitions of success and looks toward a culture based on trust and humility. *The Social Animal* is a moving intellectual adventure, a story of achievement and a defense of progress. It is an essential book for our time—one that will have broad social impact and will change the way we see ourselves and the world.

In this sweeping critique of how managers are educated and how, as a consequence, management is practiced, Henry Mintzberg offers thoughtful and controversial ideas for reforming both. "The MBA trains the wrong people in the wrong ways with the wrong consequences," Mintzberg writes. "Using the classroom to help develop people already practicing management is a fine idea, but pretending to create managers out of people who have never managed is a sham." Leaders cannot be created in a classroom. They arise in context. But people who already practice management can significantly improve their effectiveness given the opportunity to learn thoughtfully from their own experience. Mintzberg calls for a more engaging approach to managing and a more reflective approach to management education. He also outlines how business schools can become true schools of management.

Is management a profession? Should it be? Can it be? This major work of social and intellectual history reveals how such questions have driven business education and shaped American management and society for more than a century. The book is also a call for reform. Rakesh Khurana shows that university-based business schools were founded to train a professional class of managers in the mold of doctors and lawyers but have effectively retreated from that goal, leaving a gaping moral hole at the center of business education and perhaps in management itself. Khurana begins in the late nineteenth century, when members of an emerging managerial elite, seeking social status to match the wealth and power they had accrued, began working with major universities to establish graduate business education programs paralleling those for medicine and law. Constituting business as a profession, however, required codifying the knowledge relevant for practitioners and developing enforceable standards of conduct. Khurana, drawing on a rich set of archival material from

business schools, foundations, and academic associations, traces how business educators confronted these challenges with varying strategies during the Progressive era and the Depression, the postwar boom years, and recent decades of freewheeling capitalism. Today, Khurana argues, business schools have largely capitulated in the battle for professionalism and have become merely purveyors of a product, the MBA, with students treated as consumers. Professional and moral ideals that once animated and inspired business schools have been conquered by a perspective that managers are merely agents of shareholders, beholden only to the cause of share profits. According to Khurana, we should not thus be surprised at the rise of corporate malfeasance. The time has come, he concludes, to rejuvenate intellectually and morally the training of our future business leaders.
