

Prentice Hall Algebra 2 Chapter 7 Test Answers

This course is designed to help make sense of the mathematics you encounter in and out of class each day. You will learn important mathematical principles. You will also learn how the principles are connected to one another and to what you already know. You will learn to solve problems and learn the reasoning that lies behind your solutions. Each chapter begins with the "big ideas" of the chapter and some essential questions that you will learn to answer. Through this question-and-answer process you will develop your ability to analyze problems independently and solve them in different applications. - p. vii.

Concerned with criticizing representational theories of knowledge by developing alternative concepts of knowing and communicating, Ian Angus and Lenore Langsdorf bring together eight essays that are united by a common theme: the convergence of philosophy and rhetoric. In the first chapter, Angus and Langsdorf illustrate the centrality of critical reasoning to the nature of questioning itself, arguing that human inquiry has entered a "new situation" where "the convictions and orientations that have traditionally marked the separation of rhetoric and philosophy?the concern for truth and the focus on persuasion?have begun to converge on a new space that can be defined through the central term discourse." In these essays, this convergence of rhetoric and philosophy is addressed as it presents itself to a variety of interests that transcend the traditional boundaries of these fields. The two editors, Raymie E. McKerrow, Michael J. Hyde and Craig R. Smith, James W. Hikins and Kenneth S. Zagacki, Calvin O. Schrag and David James Miller, and Richard L. Lanigan map this new space, recognizing that such mapping "simultaneously constitutes the territory mapped."
