Protecting and maintaining water distributions systems is crucial to ensuring high quality drinking water. Distribution systems -- consisting of pipes, pumps, valves, storage tanks, reservoirs, meters, fittings, and other hydraulic appurtenances -- carry drinking water from a centralized treatment plant or well supplies to consumers's taps. Spanning almost 1 million miles in the United States, distribution systems represent the vast majority of physical infrastructure for water supplies, and thus constitute the primary management challenge from both an operational and public health standpoint. Recent data on waterborne disease outbreaks suggest that distribution systems remain a source of contamination that has yet to be fully addressed. This report evaluates approaches for risk characterization and recent data, and it identifies a variety of strategies that could be considered to reduce the risks posed by water-quality deteriorating events in distribution systems. Particular attention is given to backflow events via cross connections, the potential for contamination of the distribution system during construction and repair activities, maintenance of storage facilities, and the role of premise plumbing in public health risk. The report also identifies advances in detection, monitoring and modeling, analytical methods, and research and development opportunities that will enable the water supply industry to further reduce risks associated with drinking water distribution systems.

The design, construction and use of buildings in tropical climates pose specific challenges to built environment professionals. This text seeks to capture some of the key issues of technology and practice in the areas of building design, refurbishment, construction and facilities management in tropical regions. Using a consistent chapter structure throughout, and incorporating the latest research findings, this book outlines: the functional requirements of buildings in tropical climates; the challenges associated with the sustainability of the built environment, building form and whole life performance in the context of a tropical setting; the impact of potentially hostile tropical conditions upon building pathology and the durability of components, structure and fabric; the tasks which face those responsible for appraising the design, condition, maintenance and conservation of built heritage in tropical regions; the facilities management issues faced in tropical climates; and the refurbishment, upgrade and renewal of the tropical built environment. The book is ideal as a course text for students of Architecture, Construction, Surveying and FM as well as providing a sound reference for practitioners working in these regions.

Innovations in Maternal Health presents a compilation of twenty-three innovations from the area of Maternal and Newborn Health. These innovations have been written in the case-study style for teaching, which will be beneficial for capacity building initiatives for health-care professionals. These descriptive cases cover innovative programmes, initiatives and technologies implemented in India. Each case is complemented by a documentary film provided in the accompanying DVD. The book takes us on a boat ride through the rarely travelled riverine areas of the Majuli Islands of Assam and the Sunderbans in West Bengal to the state of Tamil Nadu, which is known for its constant endeavours to improve its health-care system, considered one of the best in the country. Technological innovations to address hypothermia in newborns and buy time in cases of postpartum haemorrhage in low-resource settings have been documented in detail. The book hopes to encourage readers to analytically view the need for innovations, critically analyse their success and challenges and the need for information sharing for better utilization of existing knowledge.

A comprehensive approach to maintenance and repair planning and budgeting for all major building types. Facilities professionals faced with the task of providing higher quality services on smaller budgets will find guidance for evaluating and budgeting facilities operations, maintaining and repairing major building components, and assembling costs into a defensible budget.

New technology and aging buildings are making library facility management more complex and difficult than ever before. Many librarians have inherited buildings that not only need to be retrofitted for today's technology, but also require repair and replacement of basic systems. The handbook was written by a Director and a professional facilities manager to provide the practical advice, techniques, and solutions library managers need to ensure that their facilities can function for their intended purposes. Chapters cover planning and evaluating, security and safety, lighting, climate control, parking, access, costs and finances, preventive maintenance and repairs, record-keeping, contracts, bidding, specifications, and much more. An extensive glossary of terms provides the language needed to communicate with facilities staff and contractors.

Parking Structures provides a single-source reference for parking structure designers, builders, and owners. This third edition is still the only such book. It addresses how to select the best functional and structural designs for a given situation, ensure long-term durability, design for easy maintenance, decide on the number and placement of entrances and exits, design an easily understood wayfinding system, design for ADA compliance, plan for internal auto and pedestrian traffic circulation, select the most effective and energy efficient lighting system, avoid the most common design and construction pitfalls, provide for adequate patron safety and security, carry out needed repairs, and extend the parking structure life. Parking Structures addresses all the major issues related to parking garages. It is an essential reference for parking structure owners, structural engineers, architects, contractors, and other professionals. New in the third edition: This third edition of Parking Structures includes new material on metric dimensions and recommendations for functional design globally, new research on flow capacity and queuing at parking entry/exits, an entirely new chapter on planning for a new parking

structure, including cost issues and alternatives to structure construction, pedestrian considerations, safety in parking facilities, plazas above parking structures, an expanded chapter on seismic design, seismic retrofit, life cycle cost analysis, and upgrades to existing structures.
