This text describes keratorefractive surgical procedures for myopia, hyperopia, astigmatism, and presbyopia. This illustrated resource is technique-oriented and should be useful to general ophthalmologists interested in incorporating these new procedures into their practice.

Well organized and easy to read, *Clinical Procedures in Primary Eye Care, 5th Edition*, takes an accessible, step-by-step approach to describing the commonly used primary care procedures that facilitate accurate diagnosis and effective patient management. This practical, clinically-focused text offers succinct descriptions of today's most frequently encountered optometric techniques supported by research-based evidence. You'll find essential instructions for mastering the procedures you need to know, including recent technical advances in the field. Discusses technical advances that are dramatically altering optometry: Optical Coherence Tomography (OCT) and ultra-wide field imaging (optomaps). Presents outstanding new digital images of OCT cases and optomaps for a wide variety of conditions of the central and peripheral retina. Focuses on evidence-based optometry; all procedures include a section that reviews when and

Written by experts in the field, this comprehensive resource offers valuable information on the practical uses of drugs in primary eye care. Discussions of the pharmacology of ocular drugs such as anti-infective agents, anti-glaucoma drugs, and anti-allergy drugs lead to more in-depth information on ocular drugs used to treat a variety of disorders, including diseases of the eyelids, corneal diseases, ocular infections, and glaucoma. The book also covers ocular toxicology, focusing on drug interactions, ocular effects of systemic drugs, and life-threatening systemic emergencies.

Established for fifteen years as the standard work in the field, Melvin Lewis's *Child and Adolescent Psychiatry: A Comprehensive Textbook* is now in its Fourth Edition. Under the editorial direction of Andrés Martin and Fred R. Volkmar—two of Dr. Lewis's colleagues at the world-renowned Yale Child Study Center—this classic text emphasizes the relationship between basic science and clinical research and integrates scientific principles with the realities of drug interactions. This edition has been reorganized into a more compact, clinically relevant book and completely updated, with two-thirds new contributing authors. The new structure incorporates economics, diversity, and a heavy focus on evidence-based practice. Numerous new chapters include genetics, research methodology and statistics, and the continuum of care and location-specific interventions. Ophthalmic Nursing provides an overview for those just setting out in a role within ophthalmic nursing. It includes basic and comprehensible anatomy and physiology – the foundations for understanding how the eye functions and why and how problems occur – and relates them to the care and needs of the patient. This accessible text includes evidence-based procedure guidelines and the inclusion of reflective activities in most chapters allows readers to apply their knowledge to the realities of the care setting. Also covered are the most recent National Institute for Health and Care Excellence (NICE) guidelines for glaucoma and age-related macular degeneration. Since the publication of the fourth edition, there have been many advances in the care and management of the ophthalmic patient. The authors have updated the chapters accordingly and included new colour images and diagrams. References, further reading and websites have also been updated to reflect current trends. A valuable resource for nurses in practice and training, this book continues to be the ‘go-to’ source for those caring for the ophthalmic patient.

incorporates current NICE guidelines, the Government's Alcohol Strategy (2012), as well as case study scenarios and examples of best practice throughout. From a new editor and a multidisciplinary contributor team, ABC of Alcohol is a practical guide for general practitioners, family physicians, practice nurses, primary healthcare professionals as well as for junior doctors, medical and nursing students. The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye

Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

This edition covers all aspects of the subject needed by medical students. It is a
volume in the Illustrated Colour Text series, with the subject matter divided into
double-page spreads; this makes the information very accessible to the reader.
Full use is made of flow charts and other graphics; clinical "boxes;" summary
points; case histories; and clinical photographs. The whole orientation of the book
is to concentrate on how clinical biochemistry relates to the care of the patient
and to ensure that the medical student understands how to interpret laboratory.
