È la continuazione del mio primo libro, “Pal Mònt”, in friulano lavorare in tutto il Mondo, dove
descrivevo l’avventuroso percorso d’imprenditore agli inizi della mia attività. Nella seconda
biografia proseguo il racconto che si fermava al 1990. Come il primo anche questo non è un
manuale di noiosa tecnica costruttiva ma un libro divertente sui fatti e personaggi, più o meno
importanti, che hanno collaborato con me o che ho incontrato in quei periodi di attività. Tutti gli

episodi descritti sono realmente accaduti, non ci sono più i cantieri in Africa ed America ma siamo in Italia, in Europa, nel mio Friuli e nel sud est asiatico, dove ho vissuto per oltre vent'anni. Ho sempre desiderato raccontare la mia singolare vita imprenditoriale, iniziata per caso e senza un soldo e non ancora esaurita. Due anni fa fui costretto a letto per una breve malattia il che mi ha dato l'opportunità di scrivere il primo "Pal Mònt", questo è il seguito che ho steso durante la quarantena forzata del corona virus. In entrambi si coglie la voglia di fare e di proporsi, senza mai fermarsi ed arrendersi, un insegnamento alle nuove generazioni. L'immagine che scaturisce è quella di una persona più ponderata rispetto al primo periodo, con i piedi per terra, innamorato del lavoro ma anche della vita, ora c'è più esperienza e meno avventura giovanile, meno frenesia e più spazio anche ai momenti di pausa. È una biografia che si legge tutta d'un fiato, che fotografa lo spirito dell'autore, ma le peculiarità sono i personaggi descritti, che abbracciano un'ampia area geografica.

Les enormes masses calcàries de les Dolomites, que emergeixen de sobte enmig del bosc, no solament són una serralada d'un perfil geogràfic, paisatgístic i geològic enormement atractiu, sinó que són completament diferents de la tipologia de muntanyes que estem acostumats a veure als Pirineus i, fins i tot, als mitificats Alps, massís del Mont Blanc inclòs. Només això ja és un atractiu per anar-hi; però n'hi ha més. Sella, Gardena, Marmolada o Pordoi són referents mítics per als amants del ciclisme perquè formen part de la història de les 88 edicions del Giro d'Itàlia, una de les curses per etapes més importants del món amb el Tour de França i la Vuelta a Espanya. Noms que formen part de la història del ciclisme com Galleti, Binda, Coppi, Bartali, Anquetil, Merckx, Pantani, Bugno, Hinault o Indurain han guanyat a la meta final de Milà i s'han vestit amb la maglia rosa.

“Reminds us that the best way to get to know a garden is through our senses.” —Gardenista
So much of gardening is focused on the long list of chores—the weeding, planting, and pruning. But what about the joy a garden can provide? In *The Garden in Every Sense and Season*, Tovah Martin explores the sensory delights in her own garden in 100 evocative essays. Martin shares sage garden advice, offers intimate reflections on her own garden, and urges us to inhale, savor, and become more attuned to our gardens. Packed with lush color photographs, *The Garden in Every Sense and Season* will help you grow a bounty of gratitude in your own home garden.

This volume collects the proceedings from the International Congress of Polymers in Concrete 2018 (ICPIC), held under the theme “Polymers for Resilient and Sustainable Concrete Infrastructure.” ICPIC 2018 provides an opportunity for researchers and specialists working in the fields of polymers to exchange ideas and follow the latest progress in the use of polymers in concrete infrastructure. It also showcases the use of polymers and polymer concrete in sustainable and resilient development, and provides a platform for local and overseas suppliers, developers, manufacturers and contractors using polymers, polymer concrete and polymer composites in concrete structures to develop new business opportunities and follow the latest developments in the field. The International Congress of Polymers in Concrete is an international forum that has taken place every three years for the last 40 years with the objective of following progress in the field of polymers and their use in concrete and construction. Following 15 successful congresses held in London (1975), Austin (1978), Koriyama (1981), Darmstadt (1984), Brighton (1987), Shanghai (1990), Moscow (1992), Oostende (1995), Bologna (1998), Honolulu (2001), Berlin (2004), Chuncheon (2007), Funchal

In the last few decades, a considerable amount of experimental and analytical research on the seismic behaviour of masonry walls and buildings has been carried out. The investigations resulted in the development of methods for seismic analysis and design, as well as new technologies and construction systems. After many centuries of traditional use and decades of allowable stress design, clear concepts for limit state verification of masonry buildings under earthquake loading have recently been introduced in codes of practice. Although this book is not a review of the state-of-the-art of masonry structures in earthquake zones, an attempt has been made to balance the discussion on recent code requirements, state-of-the-art methods of earthquake-resistant design and the author's research work, in order to render the book useful for a broader application in design practice. An attempt has also been made to present, in a condensed but easy to understand way, all the information needed for earthquake-resistant design of masonry buildings constructed using traditional systems. The basic concepts of limit state verification are presented and equations for seismic resistance verification of masonry walls of all types of construction, (unreinforced, confined and reinforced) as well as masonry-infilled reinforced concrete frames, are addressed. A method for seismic resistance verification, compatible with recent code requirements, is also discussed. In all cases, experimental results

are used to explain the proposed methods and equations. An important part of this book is dedicated to the discussion of the problems of repair, retrofit and rehabilitation of existing masonry buildings, including historical structures in urban centres. Methods of strengthening masonry walls as well as improving the structural integrity of existing buildings are described in detail. Wherever possible, experimental evidence regarding the effectiveness of the proposed strengthening methods is given. Contents: Earthquakes and Seismic Performance of Masonry Buildings Masonry Materials and Construction Systems Architectural and Structural Concepts of Earthquake-Resistant Building Configuration Floors and Roofs Basic Concepts of Limit States Verification of Seismic Resistance of Masonry Buildings Seismic Resistance Verification of Structural Walls Masonry Infilled Reinforced Concrete Frames Seismic Resistance Verification of Masonry Buildings Repair and Strengthening of Masonry Buildings Readership: Practising engineers and students.

In bridge applications, it is often necessary to minimize the depth of the bridge structure to provide for the required hydraulic opening or reduce the volume of approach fill. For bridges that utilize structural glued-laminated (glulam) timber beams as stringers, reinforcement using thin strips of pultruded E-glass-fiber-reinforced plastic (GFRP) composites may permit reduced depth, because the reinforcement has the potential to increase stiffness and strength. This study is part of an overall effort aimed at evaluating the potential for commercial production of glulam-GFRP beams in current wood laminating plants and a wood adhesive compatible with existing equipment. Twelve Yellow-Poplar glulam GFRP beams were commercially manufactured, and their performance was evaluated. The GFRP panels were bonded to the wood with a resorcinol formaldehyde adhesive to provide the reinforcement. The simplicity of

the process used to manufacture the test beams indicates that the commercial production of glulam-GFRP beams is feasible. Increases of 18 percent in stiffness and 26 percent in strength were achieved by adding 3 percent of GFRP by volume. The bending strength values of the beams predicted by the ASTM D3737 procedure correlate well with the experimental values. However, the observed delamination of the reinforcement indicates that improved bonding strength of wood--GFRP interfaces is needed. Results of this study will be useful to manufacturers interested in improving the performance of glulam timber beams.

“¡En París se han vuelto locos!” exclamó un ingeniero de caminos de Pau en 1910 cuando supo que el Tour de Francia iba a atravesar el mítico puerto del Tourmalet. La Grande Boucle, creada en 1903 por la mente calenturienta de un editor de periódicos...

This book is divided into four parts. In Part One the author considers the natural factors which have influenced the various national systems of education. They comprise racial, linguistic, geographical and economic factors. In Part Two he considers the contribution of religious traditions to education, more particularly those of the Catholic and Puritan faiths, and in Part Three the secular traditions of humanism, socialism and nationalism. Finally in Part Four a comparison is made of the systems of education in England and Wales, the USA, France and the Soviet Union.

First published in 1950, the FREEMASONS' GUIDE AND COMPENDIUM is filled with authentic, detailed information on a wide variety of subjects related to

asons and masonry. Written by an experienced Freemason with the interests of rank-and-file members of the ordinary lodge in mind'especially the young Craftsman who wishes to learn the nature of Freemasonry's claim to have a history that goes back to ancient days'it provides key facts about masonic history, tradition, and lore. In doing so, the book offers a far greater scope of information than any other comparable work. And Bernard E. Jones critically examines conflicting ideas about how some of the traditions came to be, coming to conclusions of his own.The early chapters of FREEMASONS' GUIDE AND COMPENDIUM describe how the masonic guilds arose in eleven-century England after the Norman conquest. From there Jones moves into the emergence of speculative Freemasonry in the late medieval period and explores its amazing growth as an esoteric system during the eighteenth century.The major part of the book consists of a comprehensive, systematic presentation of information about masonry's customs, principles and tenets, words and phrases, lodge appointments and working tools, symbols and emblems. With the help of the guide and compendium, the Craftsman will have no difficulty in making daily progress in masonic knowledge, and the thorough, exhaustive index will help him to access a great store of knowledge.As interest in the subject of Freemasonry continues to grow, as seen in the movie NATIONAL TREASURE and in Dan

Brown's forthcoming book, the FREEMASONS' GUIDE AND COMPENDIUM will be a valuable source of information for anyone who wants to research and understand the masons.

La neoclassica Sala delle Cariatidi del Palazzo Reale di Milano, realizzata fra il 1774 e il 1778 da Giuseppe Piermarini, Giocondo Arbertoli e dagli scultori Gaetano Callani e Giuseppe Franchi, fu gravemente danneggiata nel bombardamento del 1943 e, negli anni successivi, dal parziale stato di abbandono e da un uso non adeguato alla sua conservazione. Il Ministero per i Beni e le Attività Culturali nel 2003 ha avviato un cantiere di studio e ricerca finalizzato a realizzare un necessario intervento di conservazione e di restauro delle pareti decorate, di recente concluso. Il volume raccoglie i risultati degli studi e delle ricerche svolte per completare la conoscenza della Sala sotto i diversi profili: storicoarchitettonico, storico-conservativo e tecnico. Un rilevante apparato documentario dà corpo alle scelte progettuali effettuate e illustra tutti gli aspetti tecnico esecutivi dell'intervento svolto.

R&D, Innovation and Competitiveness in the European Chemical Industry explores the science & technology base and the dynamic performance of the European "system of innovation" in the chemical industry, with particular attention to its contribution to economic growth through innovation and competitiveness, and its ability to translate its research into commercially useful products. It also analyses the forces that encourage the diffusion of chemical innovations on downstream user industries and among large and small firms. The studies presented in this book represent an analysis of the issues and questions raised by the Green Paper on Innovation presented by the European Commission, for the specific case of the European chemical industry. R&D, Innovation and Competitiveness in the European Chemical Industry will be of interest to industry and government experts related to the chemical industry, scholars; both faculty and graduate students interested in growth, corporate strategy and the management of innovation.

Il testo affronta le diverse problematiche e soluzioni che si possono presentare al tecnico nel rifacimento del prospetto di un edificio esistente, in particolare condominiale, con struttura portante intelaiata in c.a. e in muratura portante. Vengono trattati gli aspetti di ripristino strutturale e rifacimento intonaci, le cause di degrado dell'umidità da risalita capillare, nonché gli errori esecutivi negli interventi di emergenza in caso di cornicioni e balconi aggettanti pericolanti per fenomeni di spalling del calcestruzzo dovuto alla corrosione delle armature. È stata data la giusta rilevanza al contratto d'appalto, spesso sottovalutato, negli interventi di

manutenzione straordinaria, ricordando che nella sua stesura non è consigliato fare riferimenti a norme riguardanti i lavori pubblici poiché costituiscono un caso a parte disciplinato da norme specifiche. Il testo è completato con la trattazione dei vizi e le difformità delle opere realizzate, nel caso specifico vizi e difetti nell'esecuzione degli intonaci come microcavillature inaccettabili dal punto di vista estetico o distacchi di porzioni di intonaco, il cui rifacimento, costituendo un rappezzo, darà adito ad altre contestazioni poiché sarà sempre visibile.
