Managerial cost accounting is the financial and managerial tool that is used to estimate the organizational cost of products and services in business and government. In recent decades, cost accounting in the United States and other advanced industrial countries has been dominated by discussions of Activity Based Costing or ABC. While ABC can be shown to produce a more accurate estimate of cost than older and more basic types of cost accounting, ABC is not used extensively in many governments. We argue that this recent focus on ABC has stifled examination and discussion of how government cost accounting is being used and how it could be used in practice. The study of cost accounting practice reveals an important and underexplored area of financial management in government. Given the scandals that cost accounting estimates can create and that different types of cost accounting can create different estimates of cost it may be reasonable to ask whether the cost accounting exercise is worth it? Cost Accounting in Government: Theory and Applications addresses these unusual and unusually important topics through a series of studies of different government cost accounting practices. The first section of the book presents two chapters on the history and basic elements of cost accounting. The second section of the book provides further discussion and case studies of actual cost accounting practices in the main areas that cost accounting has been used in government: benchmarking the performance of government services, rate setting, grant overhead cost recovery, and cost management. The last two chapters discuss cost accounting practices in Europe and the future of cost accounting. These cases span local and federal governments and provide a much needed context to the study of cost accounting in government. Aimed at academics, researchers and policy makers in the fields of Accounting, Public Administration, and Government Studies, Cost Accounting in Government: Theory and Applications seeks to address the practical and theoretical gap in government cost accounting research with case studies of different public agencies that are using cost accounting for different purposes. The case studies illustrate that different purposes for cost accounting create unique and interesting cost accounting practices. The case studies provide useful examples of actual cost accounting systems that can inform both research and instruction

Many lawyers, especially those dealing with commercial matters, need to understand accounting yet feel on shaky ground in the area. This book is written specifically for them. It breaks down and makes clear basic concepts (such as the difference between profit and cash flow), the accounting profession and the legal and regulatory framework within which accounting operates. The relevant provisions of the Companies Act 1985 are discussed at some length. Holgate explains generally accepted accounting principles in the UK (GAAP), the trend towards global harmonisation and the role of international accounting standards. He then deals with specific areas such as group accounts, acquisitions, tax, leases, pensions, financial instruments, and realised profits, focusing in each case on those aspects that are likely to confront lawyers in their work. This book will appeal to the general practitioner as well as to lawyers working in corporate, commercial, and tax law.

"Introduction to Financial Statements Knowing the numbers is sometimes even a matter of corporate survival. Consider the story of Columbia Sportswear Company, headquartered in Portland, Oregon. Gert Boyle's family fled Nazi Germany when she was 13 years old and then purchased a small hat company in Oregon, Columbia Hat Company. In 1971, Gert's husband, who was then running the company, died suddenly. Gert took over the small, struggling company with help from her son Tim, who was then a senior at the University of Oregon. Somehow, they kept the company afloat. Today, Columbia has more than 4,000 employees and annual sales in excess of \$1 billion. Its brands include Columbia, Mountain Hardwear, Sorel, and Montrail. Employers such as Columbia Sportswear generally assume that managers in all areas of the company are "financially literate." To help prepare you for that, in this text you will learn how to read and prepare financial statements, and how to use key tools to evaluate financial results using basic data analytics."--
