This popular textbook provides a comprehensive but accessible coverage of health economic principles and applications. It provides an introduction for those with no previous knowledge of economics, but also more advanced material suitable for those with a background in economics. Now into its second edition, Barbara McPake and Charles Normand have incorporated developments in economic evaluation and economics of health systems from recent research and experience while retaining an accessible approach and style. The book starts with a section on basic economic principles as applied to health and health care, and goes on to discuss economic evaluation in health care, the economics of health systems and health care finance. Examples and illustrations are taken from a wide range of settings and world regions, reflecting the authors' belief that the same principles apply, and that it is useful to have some understanding of how different countries organise the health system. It provides an understanding of the performance of different health systems from the insurance based approaches in the United States to government funding that is common in Canada and most countries in Europe, and the mixed systems that operate in most low-income countries. This book is ideal for students in public health and related courses, for health care professionals and those studying health economics at a more advanced level.

Volume II in The Making of Economics, 4th Edition series fills a major gap in the literature of economics, providing in brief fashion a complete treatment of high theory in economics. Like Volume I, the book is accessible to the intelligent reader, be they advanced undergraduate or graduate students, laypeople, or professors of economics and finance. The author walks the reader through the maze of contemporary economics, acquainting them with the most up-to-date theories as well as recent economic history. The learning tasks are eased by volleys of examples as well as dramatic illustrations. The progression is from neoclassical Keynesian economics to monetarism, continuing with mathematical economics and econometrics, the theory of economic growth, the new classical economics, game theory, experimental economics, and global economics. For example, common threads between Smithian classical economics and new classical economics are woven into the fabric of discussions directing the way to the higher theory. The new chapters on mathematics and econometrics, game theory, experimental economics, and globalization are not to be found in other surveys of what the author calls the 'Modern Superstructure of Economics.'; Although designed to be used with Volume I, it can also stand alone as a text or textbook supplement for a wide range of courses in economics and finance. This book is also available as a .
