It is essential to recognize academic nursing education as a specialty area of practice and academic nurse educators as an advanced practice role within professional nursing. The Scope of Practice for Academic Nurse Educators and Academic Clinical Nurse Educators, Third Edition outlines core competencies with task statements for both academic nurse educators practicing in the full scope of the faculty role and academic clinical nurse educators who work with learners in clinical settings. This updated resource presents the historical perspective, values and beliefs, theoretical framework, research in the academic nurse educator roles, and future for those roles. The discussion of each role details relevant definitions, scope of practice, standards of practice, and specific competencies.

In 1949, a small book had a big impact on education. In just over one hundred pages, Ralph W. Tyler presented the concept that curriculum should be dynamic, a program under constant evaluation and revision. Curriculum had always been thought of as a static, set program, and in an era preoccupied with student testing, he offered the innovative idea that teachers and administrators should spend as much time evaluating their plans as they do assessing their students. Since then, *Basic Principles of Curriculum and Instruction* has been a standard reference for anyone working with curriculum development. Although not a strict how-to guide, the book shows how educators can critically approach curriculum planning, studying progress and retooling when needed. Its four sections focus on setting objectives, selecting learning experiences, organizing instruction, and evaluating progress. Readers will come away with a firm understanding of how to formulate educational objectives and how to analyze and adjust their plans so that students meet the objectives. Tyler also explains that curriculum planning is a continuous, cyclical process, an instrument of education that needs to be fine-tuned. This emphasis on thoughtful evaluation has kept *Basic Principles of Curriculum and Instruction* a relevant, trusted companion for over sixty years. And with school districts across the nation working feverishly to align their curriculum with Common Core standards, Tyler's straightforward recommendations are sound and effective tools for educators working to create a curriculum that integrates national objectives with their students' needs.

A comprehensive overview using an open systems approach *Schools and Society: A Sociological Approach to Education*, Third Edition, now published by Pine Forge Press, features original readings and article excerpts by leaders in the area of Sociology of Education. With a wide array of theoretical perspectives, a broad range of respected sources, and inclusion of both classic and contemporary studies, this comprehensive, integrated text addresses key issues in the field with a balanced presentation. Edited by Jeanne H. Ballantine and Joan Z. Spade, both of whom actively teach Sociology of Education courses, this text continues to offer theory, methods, and classical and current issues organized around the theme of the open systems approach to make both the pedagogy and presentation of material coherent for students. Thus, the book is not just a collection of articles but a presentation of a holistic view of educational systems. New to the Third Edition 32 new readings, 2 readings revised for this edition, and 19 articles previously included, all by early and contemporary noted scholars Expanded text introductions to each chapter provide a holistic view of the field Part introductions

outline key issues in a given area of the field and explain the contributions made by the selections that follow. Introductory questions to consider when reading each article encourage students to engage in critical thinking. Conclusions to each part feature suggested projects for continued exploration of the topic. Instructor Resources on CD are available to qualified instructors by contacting info@sagepub.com. The perfect all-in-one guide for future nurse educators! The award-winning *Teaching in Nursing: A Guide for Faculty*, 6th Edition prepares you for the day-to-day challenges of teaching future nurses for practice in today's rapidly evolving healthcare system. This comprehensive resource is the only one of its kind to cover all four components of nursing education: teaching and learning, curriculum, evaluation, and technology-empowered learning. You'll benefit from the expert guidance on such key issues as curriculum and test development, diverse learning styles, the redesign of healthcare systems, and advances in technology and information. Plus, the 6th edition includes a unique new chapter on Global Health and Curricular Experiences along with updated information on technology-empowered learning, the flipped classroom, interprofessional education, interprofessional collaborative practice, and much more. Comprehensively addresses all four components of nursing education including teaching and learning, curriculum, evaluation, and technology-empowered learning. Coverage of concept-based curricula includes strategies on how to approach and implement concept-based instruction. Pedagogical aids include Evidence-Based Teaching boxes, covering such issues as how to do evidence-based teaching; applications of evidence-based teaching; implications for faculty development, administration, and the institution; and how to use the open-ended application questions at the end of each chapter for faculty-guided discussion. Strategies to promote critical thinking and active learning are incorporated throughout the text, highlighting various evaluation techniques, lesson planning insights, and tips for developing examinations. Guidance on teaching in diverse settings addresses such topics as the models of clinical teaching, teaching in interdisciplinary settings, how to evaluate students in the clinical setting, and how to adapt teaching for community-based practice. Strong emphasis on teaching clinical judgment, new models of clinical education, and responding to needs for creating inclusive multicultural teaching-learning environments. NEW! Updated content throughout reflects the latest evidence-based guidelines for best practices in teaching and learning. NEW! UNIQUE chapter on Global Health and Curricular Experiences focuses on internationalization of the nursing curriculum with an emphasis on leading international learning experiences; policies, procedures, and guidelines for overseas study and global and health competencies for health professions programs. NEW! Enhanced pedagogy includes additional illustrations, tables, and boxes. NEW! Expanded interprofessional education chapter, provides you with strategies for effective teaching in an interprofessional healthcare environment.

Basic Principles of Curriculum and Instruction University of Chicago Press

The curriculum of elementary schools is a very important factor in the education of children. Students need to understand and express themselves in a language which can be the Mother Tongue only at the elementary level. Curriculum development is an important part of the education process, ensuring that classes at all levels, from early childhood to post-secondary, are best designed to help students be successful in learning the material and gaining the skills needed to continue to advance. Evaluation essentially is the provision of information for the sake of facilitating decision making at various stages of curriculum development. This information may pertain to the program as a complete entity or only to some of its components. Evaluation also implies the selection of criteria, collection and analysis of data. It includes obtaining information for use in judging the worth of a programme and procedure. It is a comprehensive term and transcends standardized tests covering all means of ascertaining the results of construction. A curriculum framework is an organized plan or set of standards or learning outcomes that defines the content to be learned in terms of clear, definable standards of what the student should know and be able to do. The supporters of learner-centered Curriculum give importance to individual development and they want to organize the curriculum according to the needs and interest of learners, there are fundamental differences in this approach and the subject-centered design. The curriculum framers for elementary schools should also associate the parents and specialists while developing the curriculum for elementary education.

"This is a detailed yet practical guide to planning, developing, and evaluating nursing curricula and educational programs. It provides a comprehensive and critical perspective on the totality of variables impacting curricular decisions... This book provides readers with a comprehensive overview of curriculum development, redesign, and evaluation processes and exposes them to the variables impacting curricular decisions... 92 - 4 Stars." Kathleen A. Poindexter, PhD, MSN, RN, CNE, Doody's Book Reviews New Edition of The Leading Nursing Text on Curriculum Development and Evaluation! This third edition of the leading nursing text on curriculum development and evaluation continues to address relevant NLN and AACN core competencies for curricula in all undergraduate and graduate nursing programs. Written for graduate students and faculty, this new edition responds to the many changes that have occurred in nursing and education since the second edition was published. These include the continued shortage of nursing faculty and the projected additional losses of experienced faculty due to impending retirements, as well as the implementation of the Affordable Care Act and Consensus Model for Advanced Practice Nursing. This third edition covers curriculum development and evaluation in detail and provides the knowledge and practical applications needed by new and experienced faculty to confidently embrace the academic role. With an emphasis on interdisciplinary collaboration throughout, the text focuses on the growth of simulation, guidance for new faculty transitioning from a clinical to academic role, developing curricula for practice and academic settings, program evaluation, accreditation activities, and recommendation for research in nursing education. Also addressed is the explosion of DNP programs across the country and its effect on practice and education, as well as the controversy surrounding the use of simulation. Chapter objectives, discussion points, learning activities, references and a glossary enhance learning and retention of material. The text is a valuable resource for CNE certification review. New to the Third

Edition: New chapter: Role of Faculty in Curriculum Development and Evaluation New chapter: Financial Support and Budget Management for Curriculum Development New chapter: Research and Evidence-Based Practice in Nursing Education Emphasis on guiding the assimilation of new instructors into faculty roles of program and curriculum development, instructional design, and student evaluation New content on curriculum evaluation, financial support, and budget management Strong focus on Interdisciplinary Educational Collaboration throughout Addresses the need for preparing more faculty to educate thousands of new nurses as defined by the IOM Report, the Affordable Care Act, and the Consensus Model Instructor Materials including: PowerPoint slides, syllabi, teaching/learning strategies, learning activities and associated rubrics for grading. Continuing its calling to define the field and where it is going, the Second Edition of this landmark handbook brings up to date its comprehensive reportage of scholarly developments and school curriculum initiatives worldwide, providing a panoramic view of the state of curriculum studies globally. Its international scope and currency and range of research and theory reflect and contribute significantly to the ongoing internationalization of curriculum studies and its growth as a field worldwide. Changes in the Second Edition: Five new or updated introductory chapters pose transnational challenges to key questions curriculum research addresses locally. Countries absent in the First Edition are represented: Chile, Colombia, Cypress, Ethiopia, Germany, Iran, Luxembourg, Nigeria, Peru, Poland, Portugal, Singapore, South Africa, Spain, and Switzerland. 39 new or updated chapters on curriculum research in 34 countries highlight curriculum research that is not widely known in North America. This handbook is an indispensable resource for prospective and practicing teachers, for curriculum studies scholars, and for education students around the world.

`This is an exceptional book. It tempted me to throw out most of my collected works on the management of change, because the author has somehow succeeded by including almost every aspect of educational change that any practitioner would wish to consider....Overall this is a very stimulating book. It is packed with information and the ideas and concepts contained could pack a school development plan for many years' - School Leadership and Management The theories and practices from the literature on business, manufacturing and commerce which inform principles for managing change in education are identified in this book. The author shows how the complexity of change can be addressed effectively. One principle of effective management of change is its potential to empower the individuals and organizations, its power to create and operate win/win situations. That can only be done by addressing the human side of organizations. The strength of the business literature is that far from advocating the austere, over-rationalized, dehumanized and objective pursuit of profit at all costs, it suggests that the effective management of change is an affirmation of the humanity of business.

The Fourth Edition of this popular text expands on the third by taking an in-depth look at teaching strategies appropriate for educators working in all health related professions. Chapters present a broad range of strategies, as well as the learning environment to best use the strategies, detailed practical and theoretical

information about the strategies, how to deal with problems that could occur, specific examples of the strategies as they have been used, and resources available for further information. Focusing on innovation, creativity, and evaluation, the strategies are developed for use in traditional classroom settings, technology-based settings, and clinical settings.

Sport management is an industrious field concerning the business aspects of sports and recreation. Some examples of sport managers include the front office system in professional sports, college sports managers, recreational sport managers, sports marketing, event management, facility management, sports economics, sport finance, and sports information. Bachelor's and master's degrees in sport management are offered by many colleges and universities. A number of classes outside of sport management may be relevant to the field, including; classes in management, marketing, business administration, and accounting. Internships may also open opportunities within the field. In America, jobs in sport management include working for professional programs like the NFL, NBA, MLB, NHL, and other professional or non-professional sport leagues in terms of marketing, health, and promotions. Curriculum - one of the four essential components of physical education - is the written, clearly articulated plan for how standards and education outcomes will be attained. School districts and schools should have a written physical education curriculum for grades K-12 that is sequential and comprehensive. It should be based on national and/or state standards and grade-level outcomes for physical education, and should include learning objectives for students as well as units and lessons for teachers to implement. The physical education curriculum should mirror other school district and school curricula in its design and schedule for periodic review/update. Overall, the physical education curriculum serves the purpose of standardizing the curriculum in a school district across schools and ensuring equitable education for all students. It also results in improved teacher quality and increased consistency in instruction.

Teaching and Learning in a Concept-Based Curriculum: A How-To Best Practice Approach provides specific, practical tools and strategies for teaching and evaluating students in the conceptbased curriculum model. The text includes sample lesson plans and study guides to show how a concept is taught in the classroom, clinical teaching activities that connect classroom and clinical learning, and clinical evaluation tools to assess student competence in a concept-based curriculum.

NLN Core Competencies for Nurse Educators: A Decade of Influence Judith A. Halstead, PhD, RN, ANEF, FAAN, Editor Thirteen years after initial publication, the NLN Core Competencies for Nursing Educators continue to guide the development of graduate nursing programs, define the roles and responsibilities of nurse educators, and provide a framework for

ongoing research in identifying the knowledge, skills, and attitudes essential to preparing a qualified nursing workforce. NLN Core Competencies for Nurse Educators: A Decade of Influence revisits these critical guidelines through a contemporary lens that underscores their ongoing influence and offers valuable insight into how they will help shape the evolution of the nurse educator role. Whether you're a practicing nurse educator or pursuing a career in nursing education, you'll gain a better understanding of the theoretical foundation behind this landmark literature and learn how to best use it to successfully navigate the complex role of today's nursing faculty. "Nurse educators, grounded by the current evidence about the role of the nurse educator, will ensure that the next generation of students is prepared to provide interdisciplinary, patient-focused, safe, and high-quality care." Instructional-Design Theories and Models, Volume IV provides a research-based description of the current state of instructional theory for the learner-centered paradigm of education, as well as a clear indication of how different theories and models interrelate. Significant changes have occurred in learning and instructional theory since the publication of Volume III, including advances in brain-based learning, learning sciences, information technologies, internet-based communication, a concern for customizing the student experience to maximize effectiveness, and scaling instructional environments to maximize efficiency. In order to complement the themes of Volume I (commonality and complementarity among theories of instruction), Volume II (diversity of theories) and Volume III (building a common knowledge base), the theme of Volume IV is shifting the paradigm of instruction from teacher-centered to learner-centered and integrating design theories of instruction, assessment, and curriculum. Chapters in Volume IV are collected into three primary sections: a comprehensive view of the learner-centered paradigm of education and training, elaborations on parts of that view for a variety of K-12 and higher education settings, and theories that address ways to move toward the learner-centered paradigm within the teacher-centered paradigm. Instructional-Design Theories and Models, Volume IV is an essential book for anyone interested in exploring more powerful ways of fostering human learning and development and thinking creatively about ways to best meet the needs of learners in all kinds of learning contexts.

The book argues that academics, academic developers and academic leaders need to undertake curriculum work in their institutions that has the potential to disrupt common sense notions about curriculum and create spaces for engagement with scholarly concepts and theories, to re-imagine curricula for the changing times. Now, more than ever in the history of higher education, curriculum practices and processes need to be shared; the findings of research undertaken on curriculum need to be disseminated to inform curriculum work. We hope the book will enable readers to look beyond their contextual difficulties and

constraints, to find spaces where they can dream, and begin to implement, innovative and creative solutions to what may seem like intractable challenges or difficulties.

Theory and Research for Academic Nurse Educators: Application to Practice is an essential guide to nursing education theory, research and its application in the classroom. Designed for the nurse educator, this comprehensive guide is focused around the National League for Nursing's eight core competencies for academic nurse educators. This textbook contains an overview of the academic nurse educator role, core competencies, strategies for applying theory and research-based knowledge to further professional development. This text is an ideal resource for nurses preparing for the Certified Nurse Educator Exam (CNE) and nursing education students.

First Edition Winner of the Journal of Nursing Education's Top Teaching Tools Award! This award-winning text presents top-notch guidance and a host of practical tools for nursing clinicians transitioning into a faculty role. The second edition is updated to address the many significant innovations taking place in nursing education and how they affect the faculty role including expanding emphasis on interprofessional education, increasing use of interactive teaching strategies and technology enhanced learning, acquiring research funding in a competitive environment, and the growing importance of fostering faculty leadership and succession. Enriching new chapter features include examples of tools, rubrics, and strategies to illustrate concept application; "Getting Started" callouts offering "first step" strategies/activities to help novice educators apply chapter concepts in their faculty role—also serving as ready-made faculty assignments. The second edition also includes real life case examples that guide novice educators in managing common challenges in academia. Extensive resources, strategies and tips along with guidance for self-assessment help new educators to adapt and even excel during the challenging first year in a faculty role. Content New to the Second Edition: Discusses key changes and challenges in the nursing profession, health care, higher education, and nursing education Covers teaching in interprofessional education environments Addresses teaching in technology enhanced learning environments and evolving curricular models Explains how to establish teaching "presence" Emphasizes developing faculty leaders and leadership succession Addresses acquiring funding to support research Includes new chapter on establishing student-faculty relationships Key Features: Delivers proven strategies to help novice educators assume the faculty role Provides real-life case studies describing how to manage common challenges Includes resources, tips, and strategies on navigating the first faculty year Helps novice educators to engage in self-assessment to determine "best fit" in the academic environment

At a time of rapid social change and numerous policy initiatives, there is a need to question the nature and function of school curricula and the purposes of formal public education. Comparing curriculum developments around the globe, Understanding the School Curriculum draws on a range of educational, philosophical and sociological theories to examine the question 'What is a curriculum for?' In considering different answers to this fundamental question, it explores a range of topical issues and debates, including: tensions and dynamics within curriculum policy The implications of uncertainty and rapid social change for curriculum development the positive

and negative influence of free market ideologies on public education the impact of globalization and digital technologies arguments for and against common core curricula and state control It examines the possibility of a school curriculum that is not shaped and monitored by dominant interests but that has as its founding principles the promotion of responsibility, responsiveness, a love of learning, and a sense of wonder and respect for the natural and social world.

Understanding the School Curriculum is for all students following undergraduate and Masters courses in curriculum, public policy and education-related subjects. It is also for all training and practising teachers who wish to combine a deeper understanding of major curriculum issues with a critical understanding of the ways in which ideologies impact on formal state education, and to consider ways of producing school curricula that are appropriate to the times we live in.

Winner of the Journal of Nursing Education's Top Teaching Tools Award! "All too often novice educators enter their first teaching position and find their adjustment to the role of a faculty member daunting.... [This volume] is a 'must read' for any novice educator transitioning from the role of clinician or graduate student to educator....You [will] learn how to become a faculty member, integrating the competencies you bring to the setting with your new role as educator."

Marilyn H. Oermann, PhD, RN, FAAN, ANEF Professor and Division Chair, School of Nursing University of North Carolina at Chapel Hill (From the Foreword) This highly accessible volume is designed to aid novice educators and faculty-in-training in making a smooth transition from nursing practice to the world of academia. Written by two educators with a broad range of experience in both academia and national leadership positions, the volume offers a blueprint for developing the competencies related to stepping into a faculty role. The authors define the unique characteristics of different educational settings, and discuss how to select an environment that reflects one's values and personal and professional goals. Case studies offer strategies for coping with the multiple roles, stresses, and demands that novice educators often encounter. The book will help new and future nurse educators to surmount a potentially overwhelming transition with ease and confidence. Key Topics: Issues and trends of the nursing faculty role Assuming the nursing faculty role Determining institutional fit: finding the perfect faculty position Beginning your faculty career Developing in the role of teacher Developing your identity as a scholar Determining your service commitment Planning your career trajectory

The school-to-work transition has been an important topic in the fields of education and sociology research in the past few years. Pre-vocational education, which takes place during lower-secondary school and aims to facilitate the school-to-work transition, is of critical significance in introducing the participants to the world of work and/or in preparing them for entry into further vocational education programs. With a strong comparative nature, Jun Li presents this systematic investigation of the pre-vocational education in Germany and China and analyzes their curricula of pre-vocational education. By combining the methods of content analysis and teacher interview, the author offers an in-depth perspective into the realms of pre-vocational education and reveals the divergences between the prescribed curriculum and the enacted curriculum. The findings also relate closely to an intensively discussed issue in the sociology of education in the past few years, namely the issue of knowledge and its status, function and forms in the school education today.

The text provides a comprehensive survey of the basic knowledge and concepts in curriculum studies. It targets the three main aspects of curriculum as a discipline, namely: context, design and development. It will go a long way in filling the existing gap in the education literature in the Eastern Africa region.

Curriculum Development: Perspectives, Principles and Issues gives a broad overview of the various perspectives on the subject and acquaints the teachers and teacher educators with the principles of curriculum development. It begins by giving the account of historical developments, the philosophical and sociological basis and goes on to describe the processes

and models in curriculum development. This book approaches students in a way to enhance their interest in curriculum research.

Curriculum and Imagination describes an alternative 'process' model for designing, developing, implementing and evaluating curriculum, suggesting that curriculum may be designed by specifying an educational process which contains key principles of procedure. This comprehensive and authoritative book: offers a practical and theoretical plan for curriculum-making without objectives shows that a curriculum can be best planned and developed at school level by teachers adopting an action research role complements the spirit and reality of much of the teaching profession today, embracing the fact that there is a degree of intuition and critical judgement in the work of educators presents empirical evidence on teachers' human values. Curriculum and Imagination provides a rational and logical alternative for all educators who plan curriculum but do not wish to be held captive by a mechanistic 'ends-means' notion of educational planning. Anyone studying or teaching curriculum studies, or involved in education or educational planning, will find this important new book fascinating reading.

Curriculum, or the substance of what is taught, is the core business of schools, and yet little exists in the way of a theory of curriculum for educators. This book sets out the principles of curriculum theory and provides a common framework and practical strategies for the successful implementation and effective management of powerful knowledge-based curriculum for all. Offering powerful insights across the subject divides, the book explores the key elements of curriculum design including progression, sequencing, substantive and disciplinary knowledge, and the relationships of subjects to their sister disciplines. Providing a crucial foundation for school leadership, it covers: curriculum in the contexts of learning, organisational culture and key philosophical and moral ideas an explanation of thirteen specialist subjects, with outline mapping of the knowledge an emphasis on the cultural elements needed for sustained excellence in curriculum work within schools the codification of curriculum and the multiple values of documents for curriculum thinking and execution. Enabling leaders to analyse and discuss subjects beyond their specialisms, this essential text will equip readers to implement real change by leading intelligently and effectively on curriculum.

Based on the CNE® examination blueprint, Certified Nurse Educator Review Book: The Official NLN Guide to the CNE® Exam, Second Edition delivers a comprehensive review to prepare you to take the Certified Nurse Educator examination. Each chapter provides an overview of the content included on the exam blueprint and practice test items, complete with rationales for correct and incorrect answers, reflecting the types of items you will encounter on the exam. This revised edition streamlines and enhances your exam preparation with updated content, additional bulleted lists and tables, additional practice questions, and example scenarios that demonstrate the practical application of chapter concepts.

As the population continues to age and retire, the shortage of qualified nurse educators continues to grow. Simultaneously, student demand is also increasing. In order to address this current and future need, organizations are looking toward practicing clinicians to fill the gap. *Transition from Clinician to Educator: A Practical Approach* is a hands-on guide to prepare future educators who are entering the world of education. Written in an accessible style, it focuses on real issues that new educators will face as they move into the classroom. With topics drawn from the authors' own experiences, it is an essential resource to understanding the intricacies involved in being a successful educator.

Children in today's world are inundated with information about who to be, what to do and how to live. But what if there was a way to teach children how to manage priorities, focus on goals and be a positive influence on the world around them? *The Leader in Me* that programme. It's based on a hugely successful initiative carried out at the A.B. Combs Elementary School in North Carolina. To hear the parents of A. B Combs talk about the school is to be amazed. In 1999, the school debuted a programme that taught *The 7 Habits of Highly Effective People* to a pilot group of students. The parents reported an incredible change in their children, who blossomed under the programme. By the end of the following year the average end-of-grade scores had leapt from 84 to 94. This book will launch the message onto a much larger platform. Stephen R. Covey takes the 7 Habits, that have already changed the lives of millions of people, and shows how children can use them as they develop. Those habits -- be proactive, begin with the end in mind, put first things first, think win-win, seek to understand and then to be understood, synergize, and sharpen the saw -- are critical skills to learn at a young age and bring incredible results, proving that it's never too early to teach someone how to live well.

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

With its focus on the application of theory to actual classroom practice, this book's treatment of the full spectrum of curriculum design and practice has set the standard for completeness for nearly two decades. Part I explores the historical roots of current curriculum issues and practices, emphasizing the assessment of leading efforts at reform. Part II offers a critique of changing concepts of curriculum, conflicting curriculum and educational rationales, and influences for and against change. In Part III, major crosscurrents in reform and reconstruction

are discussed, including social crises, the "knowledge explosion", curriculum articulation, and emerging designs. Part IV focuses on curriculum research and improvement, paying particular attention to the roles of teachers, supervisors, administrators, and curriculum specialists in the process.

'This book will be of interest to educational practitioners, and many other professionals concerned with the education and development of the young' - ESCalate 'A very well-respected book [and a] Curriculum classic...[which offers] balance to current official publications...One of its strengths is the coherent argument that runs throughout. It is very much a product of the wide knowledge and experience of the author.' - Jenny Houssart, Senior Lecturer, Department of Learning, Curriculum & Communication, Institute of Education, University of London, UK Praise for previous editions: 'I use this book as an essential course text for a module on curriculum theory. It is an excellent text for the whole course' 'Vic Kelly's writing is always concise and informative, but also at times challenging' 'A most comprehensive text that takes the reader beyond content/balance issues values, beliefs and assumptions on the curriculum' This is the sixth edition of a book that has been regularly revised and updated since it was first published in the mid-1970s. A V Kelly's now classic work focuses on the philosophical and political dimensions of curriculum, and especially on the implications for schools and societies of various forms of curriculum. The book outlines what form a curriculum should take if it is concerned to promote a genuine form of education for a genuinely democratic society. Kelly summarises and explains the main aspects of curriculum theory, and shows how these can and should be translated into practice, in order to create an educational and democratic curriculum for all schools at all levels. The book also seeks to show that the politicization of the school curriculum has led to the establishment of policies and practices which demonstrate a failure to understand these principles of curriculum theory and practice. As a result, policies and practices have been implemented which fall short of being adequate. In view of the rapid pace of educational change imposed by various governments over the last 35 years, including New Labour, this book is more relevant than ever.

This book deals with curriculum issues and problems, and one of its aims is to help practising teachers to clarify their own theory and practice in relation to the curriculum. The contributors look at three popular theories or sets of assumptions held by teachers: the child-centred view of education; the subject-centred or knowledge-centred view; and the society-centred view. Each of these views is incomplete on its own, but each has something to contribute in planning a curriculum as a whole, and the authors emphasize that a comprehensive theory of curriculum planning would take into account the individual nature of the pupil and also recognize the social value of education. This kind of comprehensive curriculum planning has been described as the situation-centred curriculum, based on the idea that schools should be concerned with preparing the young for the world as it will be when they leave school. One of the purposes of education is to develop a child's autonomy; he or she must learn to cope with the variety of situations which will face him or her in society. Thus many different approaches must be employed in establishing a basis for the complex task of curriculum planning. The book draws on the disciplines of philosophy, psychology, history and sociology to suggest new approaches to curriculum objectives and evaluation. It considers the theoretical bases of curriculum models, practical issues of planning, evaluation and pedagogy and discusses some urgent contemporary questions about the politics and control of the curriculum.

This book describes Stenhouse's contribution to education, explores the contemporary relevance of his thinking and brings his work to the attention of a wide range of students, teachers, teacher educators and others involved in education.

Curriculum Leadership: Strategies for Development and Implementation, Third Edition is a one-of-a-kind resource written for educational leaders, teachers, and administrators. Responding to the need for globally connected classrooms and innovative leadership, this unique text

provides a rich and inclusive foundation of curriculum. The authors draw upon a wide range of research and experience to provide readers with creative, up-to-date curriculum strategies and ideas. In sharing innovative programs, learning experiences, and new approaches, they build a solid connection for curriculum development from theory to practice, helping future leaders in education meet the global challenges of our time.

Seminar paper from the year 2013 in the subject Pedagogy - Pedagogic Psychology, grade: B+, University of Dar es Salaam (SCHOOL OF EDUCATION), course: MASTER OF SCIENCE (SCIENCE EDUCATION), language: English, abstract: In this paper the concept of teacher development is well examined, and theories pertaining to it are also linked to. There are some important terms that need clarification and defining before the concept is explored in deep. The reasons why some terms are worth clarifying is the need for shared understanding. The absence of shared (common) understanding threatens construct validity, and difficulty in identifying teacher development process. Development is a process that involves change from a primitive state to a more advanced one. The United Nations Development Programme uses a more detailed definition and according to them development is to lead long and healthy lives, to be knowledgeable, to have access to the resources needed for a decent standard of living and to be able to participate in the life of the community. Human development can be viewed as freeing people from obstacles that affect their ability to develop their own lives and communities. Development is about empowerment, it is about people taking control of their own lives, expressing their own demands and finding their own solutions to their problems. Teacher development is a process whereby teachers' professionalism and/or professionalism may be considered to be enhanced (Evans, 2002). This is to say that the process of teacher development is about both the status and attitude towards the profession. Professionalism is about the status of the profession and in this regard it is about developing teachers' status professionally. Professionality is about the attitude towards the profession and in this regard it is about developing positive attitude towards it. Evans (2002) asserts that teacher development process may enhance the status of the profession as a whole and improve teachers' knowledge. "Teacher Empowerment through Curriculum Development: Theory into Practice encourages the empowerment and involvement of teachers in the curriculum development process. This updated third edition is a must for every teacher who acknowledges the need for empowerment and wishes to contribute to the process of curriculum development in a changing South Africa." --Book Jacket.
