This book provides a critical analysis and account of the development of the Comprehension Approach as a method for language learning. The author draws on interrelated sub-fields - including linguistic theory, child language acquisition, and educational technology - to examine how a comprehension-based strategy could have pedagogical potential for adult second language learning. While second language pedagogy has to date been dominated by production models, this book takes another look at the Comprehension Approach as a possible alternative, presenting results from both child first language and adult second language contexts. It will be of interest to psycholinguistics and applied linguistics scholars, particularly those with an interest in second language teaching and learning.

The book discusses all the issues related to Project Management. Strategic considerations, recognition of the human factor and need for administrative set-up are interwoven in this book while developing the main theme of the financial side of project management. New in this Book 1. New chapters titled 'Infrastructure Projects and Project Financing' have been added 2. 'Economic and Social Cost Benefit' and 'Network Analysis and Execution Plan' have been enriched with additional material 3. Components of interest rates has been elaborated and the concepts of cost of capital and required rate of return built on it 4. More examples and real cases and enhanced diagrammatic explanation 5. Chapterization scheme has been revised in the line of phases of project life cycle 6. References, footnotes and web links have been added to give readers access to extra material for further reading Key Features 1. Strategy, human aspect, administrative issues and system approach have been integrated in a single thread without compromising on conceptual clarity and simplicity 2. Use of spreadsheet has been extensively explained in chapters where it is most applicable 3. A continuous case has been built around the theme of each chapter throughout the book

Strategic planning is the starting point for projects and often the primary reason for a project's success or failure. Project leaders and project-orientated organisations need to understand strategic planning to understand their position and environment, and make rational decisions when selecting and defining their projects and programmes. The authors provide the reader with a straightforward, comprehensive understanding of the basics of project management, including the present status of the discipline, its history, and theoretical foundations. With emphasis on the project life cycle, it is designed to support the IPMA D, C, or B level qualifications, and IPMA Competence Baseline 4.0, providing you with all the information needed to pursue certification. Project: Execution is also an ideal introductory textbook to progressive programmes on strategic planning, with a focus on collaborative work, open strategy, and an exploration of open strategic planning on a social level. It provides a wealth of learning tools and case studies to demonstrate best practice. This is the ideal guide to project planning for anyone that wants their planning decisions to be as wise as they are savvy.

This book develops a critical and theoretical approach to the semiotics of motion pictures as they are applied to a broader range of constructions than traditional commercial narrative productions. This interdisciplinary approach begins with the problems posed by motion perception to develop a model of cinematic interpretation that includes both narrative and non-narrative types of productions. Contrasting traditional theatrical projection and varieties of new media, this book integrates analyses of title sequences, music videos, and visual effects with discussions on classic and avant-garde films. It further explores the intersection between formative audio-visual cues identified by viewers and how viewers' desires direct engagement with the motion picture to present a framework for understanding cinematic articulation.

This new theoretical model incorporates much of what was neglected and gives greater prominence to formerly critical marginal productions by showing the fundamental connections that link all moving imagery and animated text, whether it tells a story or not. This insightful work will appeal to students and academics in film and media studies.

Managers are often assigned projects they are ill-prepared to undertake, due to a lack of training and experience in project management. This book addresses the shortcomings and weaknesses of the "managerial" aspect of project management. The narrative will un-complicate the project management process and provide direction to managers towards furthering their understanding and involvement in the successful completion of their project. The book will reference examples of actual project work the author has performed to explain the point at hand and the book will be interspersed with appropriate illustrations to support the text.

OVER 40k`s TRAVELLED IN SEARCH OF BOTH ADVENTURE AND IDENTITY BY A GROUP OF YOUNG MUSLIM MEN OF ASIAN ORIGIN. WHO HAVE MADE THE CITY OF SHEFFIELD (GB) THEIR HOME.

From stereoview cards to large-format IMAX films, 3-D technology's heightened realism and powerful visual allure have held audiences captive for over a century and a half. The technology, known as stereoscopy, creates an illusion of depth by presenting two slightly different images to the eye in print or on-screen. The advent of stereoscopic film technology excited both filmmakers and audiences, as a means of replicating all of the sounds, colors, movement, and dimensionality of life and nature for the first time. The origins of 3-D film are often linked with a proliferation of stereoscopic films in the 1950s. By the time films like *Man in the Dark* and *House of Wax* was attracting large crowds, however, the technology behind this form of filmmaking was already over a century old. *Stereoscopic Cinema and the Origins of 3-D Film, 1838–1952*, examines this "novelty period" of stereoscopic film, charting its progression from Charles Wheatstone's 1938 discovery of 3-D to the 1952 release of Arch Oboler's innovative film, *Bwana Devil*. Stereoscopic specialist Ray Zone argues that the development of stereoscopic film can best be understood through a historical analysis of the technology rather than of its inventors. Zone examines the products used to create stereoscopic images, noting such milestones as David Brewster's and Oliver Wendell Holmes's work with stereoscopes, the use of polarizing image selection, and the success of twin-strip 3-D films, among others. In addition, Zone looks at the films produced up to 1952, discussing public reception of early 3-D short films as well as longer features such as *Power of Love* in single-strip anaglyphic projection in 1922 and Semyon Ivanov's 1941 autostereoscope *Robinson Crusoe*. He integrates his examination of the evolution of 3-D film with other cinematic developments, demonstrating the connection between stereoscopic motion pictures and modern film production. *Stereoscopic Cinema and the Origins of 3-D Film, 1838–1952*, is an exhaustive study of not only the evolution of 3-D technology and the subsequent filmmaking achievements but also the public response to and cultural impact of 3-D movies. Zone takes the reader on a voyage of discovery into the rich history of a field that predates photography and that continues to influence television and computer animation today.

This is a reformatted version of Prof C R Kothari's all-time great book *Quantitative Techniques* (Third Revised Edition). Students and teachers will find the readability in the new version much enhanced and thus comprehension greatly improved. All the diagrams have been freshly drawn for clarity. The book does not need much introduction as it has been known for years for its simplicity of approach which explains the tedious concepts of quantitative techniques in a most readerfriendly manner through practical examples. The style is so lucid that even a reader having no formal training of mathematics and statistics will not find it difficult to understand and to apply these techniques. The book is meant for MCom, CA, ICWA and degree diploma students of business administration.

Since its first publication, Teaching Secondary School Mathematics has established itself as one of the most respected and popular texts for both pre-service and in-service teachers. This new edition has been fully revised and updated to reflect the major changes brought about by the introduction of the Australian Curriculum: Mathematics, as well as discussing significant research findings, the evolution of digital teaching and learning technologies, and the implications of changes in education policies and practices. The mathematical proficiencies that now underpin the Australian curriculum -- understanding, fluency, problem solving and reasoning -- are covered in depth in Part 1, and a new section is devoted to the concept of numeracy. The chapter on digital tools and resources has been significantly expanded to reflect the growing use of these technologies in the classroom, while the importance of assessment is recognised with new material on assessment for learning and as learning, along with a consideration of policy development in this area. Important research findings on common student misconceptions and new and effective approaches for teaching key mathematical skills are covered in detail. As per the first edition readers will find a practical guide to pedagogical approaches and the planning and enactment of lessons together with enhanced chapters on teaching effectively for diversity, managing issues of inequality and developing effective relationships with parents and the community. This book is the essential pedagogical tool for every emerging teacher of secondary school mathematics. 'The text offers an excellent resource for all of those involved in the preparation of secondary mathematics teachers, with links to research literature, exemplars of classroom practices, and instructional activities that encourage readers to actively examine and critique practices within their own educational settings.' Professor Glenda Anthony, Institute of Education, Massey University 'A rich and engaging textbook that covers all of the important aspects of learning to become an effective secondary mathematics teacher. The second edition of this text ... is further enhanced with updated references to the Australian Curriculum, NAPLAN, STEM, current Indigenous, social justice and gender inequity issues, and the place of Australian mathematics curricula on the world stage.' Dr Christine Ormond, Senior Lecturer, Edith Cowan University

This is an account of the performance of three variables in the control of engineering projects - time, cost and manpower - which must be kept in harmony. It uses examples from industry to explain the selection, control and planning of a number of projects and looks at financial control.

Drawing together a wealth of primary sources, J.A. Sokalski examines the aims, inventions, and methods of the pictorial style that defined MacKaye's art. Sokalski shows how MacKaye's famous Madison Square Theatre, which featured a double stage reminiscent of an elevator, created whirling pictorial illusions for fashionable New York. He argues that MacKaye's infamous failure, the colossal Spectatorium theatre for the 1893 Chicago World's Fair, was the most complete realization of this illusionary aesthetic. Sokalski also explores MacKaye's influence on Buffalo Bill Cody and how civil war cycloramas expanded his concept of pictorial space.

Thirty-four full page photographs with descriptive narratives illustrate some of the research projects by the national institute of law enforcement. Each research effort is photographically illustrated, briefly narrated and identified by title and research grant number. Projects include crime laboratory equipments for drug detection, voice identification, trace element analysis, thermoluminescence photometry, fiber optics for examining indented writing, and equipment for detection of airborne gunshot residues. Other research projects described include such police equipment as police helmets combining a transceiver and gas mask, night vision equipment, automated status reporting for police communications, training police in family crisis intervention, training of dogs to locate bombs, evaluation of police air mobility, control of crowds and demonstrations, investigation of consumer crime and abuses, and the Santa Clara, California, and Dayton, Ohio criminal justice pilot programs. Mention is made of development of reliable law enforcement equipment, bomb disposal equipment and evaluation, reorganization and renovation of criminal court facilities. This report does not give any final results achieved on the projects described.

Organisation structure can make or break the projectmanager... New forms of organisation are emerging in the constructionindustry – from partnering to virtual teams. There is a growing need to consider project organisational structures carefully. This book differs from the many other texts on projectmanagement by concentrating on the challenges of devising relevantstructures for project management. It examines the diverse factors to be considered whendetermining an initial overall organisation for new constructionprojects. It also looks at how to vary the organisation in responseto the differing environments over the lifetime of a project. In a pragmatic, accessible style, the author has both added tothe body of knowledge in this area and provided the projectmanagement with a set of effectivemanagement tools to: examine the criteria for designing structures within anorganisation identify the factors relevant to the development of an initialproject organisation structure assess the significance of an individual factor in theoperation of a structure

This book presents an extensive study on the extant constructs of corruption in infrastructure-related projects and aims to contribute to the determination and elimination of its incidence and prevalence in infrastructure projects. The book conducts a comprehensive examination of the various determining factors of corruption that negatively affect the procurement process and, in the end, result in cost and time overruns. The authors present an in-depth understanding of how the identified determining factors of corruption can be addressed. Thus, it is intended to broaden the reader's knowledge of the causes, risk indicators, and different forms of corrupt practices in the procurement process of infrastructure works, before explaining how they affect its stages and activities. A dynamic model is developed to demonstrate how to tackle the overall impact of corruption within the procurement process and, at the same time, increase the effectiveness of the extant anti-corruption measures. In short, this book demonstrates that the fight against corruption in the procurement process is strategically feasible and must continue. This book is essential reading for academics, researchers, professionals and stakeholders in the procurement of infrastructure projects and civil works, as well as those with an interest in corruption, construction management and construction project management.

This first-of-a-kind volume provides a snapshot of existing science communication policy and practice in India across different S&T sectors, and offers solutions to building effective communication. It provides an understanding on how to avoid societal clashes in situations when science meets the public in these sectors. The editors and contributors argue that effective S&T communication leads not only to a more informed public but also benefits research itself, and in a changing society like India this is a crucial element related to good governance and policy making. In this volume, experienced masters of the craft provide practical solutions to making S&T communication more effective in a vast democracy like India, which has complex issues related to literacy levels, diverse languages, varying political will, reach, and resources. Through, discussions on cases of creating information modules for the public on the Internet, television and radio, social media, as well as traditional ways of outreach like people's science movements, holding popular science events, and fairs, the volume provides highly valuable directions on how developing countries with low resources and complex populations can communicate S&T research to the public and bridge communication gaps. This volume will interest researchers from science, social science, mass communication and public relations departments, journalists, as well as practitioners and policy makers from government and non-government institutions involved in S&T policy, practice and communication and people who want to understand the complex S&T landscape of India.
