Spherical tokamaks, with their relatively low toroidal field, extend fast-ion-driven instability physics to parameter ranges not normally accessed in conventional tokamaks. The low field means that both the fast-ion Larmor radius normalized to the plasma minor radius and the ratio of the fast-ion velocity to the Alfvén speed are relatively large. The large Larmor radius of the ions enhances their interaction with instability modes, influencing the structure of the unstable mode spectrum. The relatively large fast-ion velocity allows for a larger population of fast ions to be in resonance with the mode, increasing the drive. It is therefore an important goal of the present proof-of-principle spherical tokamaks to evaluate the role of fast-ion-driven instabilities in fast-ion confinement. This paper presents the first observations of fast-ion losses resulting from toroidal Alfvén eigenmodes and a new, fishbone-like, energetic particle mode.

This book was written to help these people approach their meeting with the insurance adjuster with a calm, assured attitude. This book is written so the material will make the person(s) with a claim more knowledgeable of the claims process and vocabulary. Thus communication during claims process with the adjuster is more comfortable and the results more positive. This problem has been reduced in recent years. A world without accounting means confusion and chaos. Accounting is not only used in the business world, but rather it is used by everyone in all types of situations. Tax touches every aspect of our lives. People are talking about tax on the TV, the radio, newspaper, and the Internet. Life has grown, as a whole, toward higher levels of complexity. The language of accounting and taxation is also expanding: More and more new words are created, and new meanings are added to the old words. Do you know the meaning of these words: ad hoc, accounting bath, below-water, blackout, capex, carve-out, e-tax, postil, Sarbanes-Oxley, strata...? Each term has its unique meaning you may not be able to find a definition in an ordinary dictionary. "An International Dictionary of Accounting & Taxation" is a book with more than 12,000 entries drawn from accounting, auditing and taxation. Each entry has a clear one-sentence definition right to the point. Whether you are an accountant, CPA, tax professional or amateur, you will find this dictionary of immeasurable help.

In November 2016, two tropical trough systems produced heavy rains in Saint Vincent and the Grenadines, which resulted in intense flooding across the island chain. The torrential rains, ensuing flash flooding, and landslides resulted in widespread damage to road, bridges, water infrastructure, and housing. Our extreme vulnerability to natural disasters and the impacts of climate variability continues to be of grave concern. This Saint Vincent and the Grenadines Rapid Damage and Loss Assessment, November 9-11 and November 28, 2016 Floods' Report serves as a reminder and proof of the Government's resolve and commitment to risk reduction as well as the well-being of our people. The Government recognizes the necessity to better understand our climate and disaster risk context and is continuing the battle to reduce this risk and improve resilience across all sectors. This report provides a rapid damage and loss assessment of the affected sectors, with focus on infrastructure damage to inform the Government's recovery, reconstruction, and financial planning. It also includes short- and medium-term recommendations designed to further incorporate disaster risk reduction and management into land use and physical planning decision-making processes so that we continue to develop into a country that is more resilient to natural disasters and climate change.

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs

syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

The primary purpose of fitness and body composition standards in the U.S. Armed Forces has always been to select individuals best suited to the physical demands of military service, based on the assumption that proper body weight and composition supports good health, physical fitness, and appropriate military appearance. The current epidemic of overweight and obesity in the United States affects the military services. The pool of available recruits is reduced because of failure to meet body composition standards for entry into the services and a high percentage of individuals exceeding military weight-for-height standards at the time of entry into the service leave the military before completing their term of enlistment. To aid in developing strategies for prevention and remediation of overweight in military personnel, the U.S. Army Medical Research and Materiel Command requested the Committee on Military Nutrition Research to review the scientific evidence for: factors that influence body weight, optimal components of a weight loss and weight maintenance program, and the role of gender, age, and ethnicity in weight management.
