Light Alloys I. J. Polmear, 1995-09-29 Thoroughly revised and updated, this third edition of Ian Polmear's Light Alloys provides the definitive overview of the metallurgy of aluminum, magnesium and titanium alloys. The emphasis remains on manufacturing processes and application areas, in which there have been significant advances in recent years. The extraction of each metal is considered briefly, followed by its casting characteristics and alloying behavior. Sections on heat treatment properties, fabrication and major applications have been expanded to give more comprehensive coverage of the subjects. Particular attention has been paid to microstructure/property relationships as well as to the role of the individual alloying elements, and new materials and novel processes are reviewed in an additional chapter. This succinct and informative introduction to the physical metallurgy of the light alloys will be essential reading for advanced undergraduates in metallurgy, materials science, manufacturing and mechanical engineering. It will also prove invaluable to metallurgists and engineers in industry seeking to expand on their knowledge. Lea's Chemistry of Cement and Concrete Peter Hewlett, 2003-11-12 *Lea's Chemistry of Cement and Concrete* deals with the chemical and physical properties of cements and concretes and their relation to the practical problems that arise in manufacture and use. As such it is addressed not only to the chemist and those concerned with the science and technology of silicate materials, but also to those interested in the use of concrete in building and civil engineering construction. Much attention is given to the suitability of materials, to the conditions under which concrete can excel and those where it may deteriorate and to the precautionary or remedial measures that can be adopted. First published in 1935, this is the fourth edition and the first to appear since the death of Sir Frederick Lea, the original author. Over the life of the first three editions, this book has become the authority on its subject. The fourth edition is edited by Professor Peter C. Hewlett, Director of the British Board of Agrement and visiting Industrial Professor in the Department of Civil Engineering at the University of Dundee. Professor Hewlett has brought together a distinguished body of international contributors to produce an edition which is a worthy successor to the previous editions.

Materials for Engineers and Technicians Raymond Aurelius Higgins, 2006 The complete introduction to materials engineering, avoiding excessive technical jargon and mathematical complexity.

The Grid Book Hannah B Higgins, 2009-01-23 Ten grids that changed the world: the emergence and evolution of the most prominent visual structure in Western culture. Emblematic of modernity, the grid is the underlying form of everything from skyscrapers and office cubicles to paintings by Mondrian and a piece of computer code. And yet, as Hannah Higgins makes clear in this engaging and evocative book, the grid has a history that long predates modernity; it is the most prominent visual structure in Western culture. In *The Grid Book*, Higgins examines the history of ten grids that changed the world: the brick, the tablet, the gridiron city plan, the map, musical notation, the ledger, the screen, moveable type, the manufactured box, and the net. Charting the evolution of each grid, from the Paleolithic brick of ancient Mesopotamia through the virtual connections of the Internet, Higgins demonstrates that once a grid is invented, it may bend, crumble, or shatter, but its organizing principle never disappears. The appearance of each grid was a watershed event. Brick, tablet, and city gridiron made possible sturdy housing, the standardization of language, and urban development. Maps, musical notation, financial ledgers, and moveable type promoted the organization of space, music, and time, international trade, and mass literacy. The screen of perspective painting heralded the science of the modern period, classical mechanics, and the screen arts, while the standardization of space made possible by the manufactured box suggested the purified box forms of industrial architecture and visual art. The net, the most ancient grid, made its first appearance in Stone Age Finland; today, the loose but clearly articulated networks of the World Wide Web suggest that we are in the middle of an emergent grid that is reshaping the world, as grids do, in its image.
