This book provides an authoritative and comprehensive review of all aspects of the law that relate to liability insurance contracts. Taking an international comparative perspective, The Law of Liability Insurance covers all the major types of liability insurance, not just professional indemnity insurance, presenting the issues according to the general principles of contract law. The book begins by concentrating on the fundamentals of the liability insurance contract before moving on to cover conditions, defence, exclusions, and finally claims against and non-payment by the insurer. This book will be an invaluable reference tool for practitioners and professionals working in the commercial liability insurance industry, including those who operate globally, as well as being a source for academics and post-graduate students.

This consumer-oriented textbook addresses the principles of risk management without skimping on the discussion of insurance. It summarizes the nature of pure risk on the individual and on society and illustrates how insurance can be used to deal with the problems posed by such risk. Mirroring the diverse experience of its authors, the text is equally effective in presenting the principles of insurance theory and offering how-to advice to students. The traditional fields of life insurance, health insurance, property and liability insurance, and social insurance are treated in terms of their relationship to the wide range of insurable risks to which the individual and the business firm are exposed.· The Problem Of Risk· Introduction To Risk Management· The Insurance Device· Risk Management Applications· The Private Insurance Industry· Regulation Of The Insurance Industry· Functions Of Insurers· Financial Aspects Of Insurer Operations· The Legal

Insurance is a concept, a technique, and an economic institution. It is a major tool of risk management, and plays an important role in the economic, social, and political life of all countries. Economic growth throughout the world has even expanded the role of insurance. Theory and Practice of Insurance aims to describe the significance of insurance institutions, the reasons they exist and how they function. The author emphasizes fundamental principles in risk and insurance, using an international frame of reference. This volume begins with an introduction to the concept of risk, then proceeds to cover insurance and its relationship to the economy; the principles of risk management and insurance; and the characteristics and performance of insurance companies.

three coverage sections-each with its own exclusions-and a supplementary payments section. Do you ever hear-or worry-that an insurance company will not pay a claim because coverage is excluded? In order to know how claims are paid, you need to understand the policy's insuring agreements and exclusions. In this book, attorney and insurance professional Dwight M. Kealy explains the insuring agreements in Coverage A, B, and C. He gives memorable examples of every standard exclusion-and some significant non-standard exclusions. He explains every supplementary payment, and he explains how policy limits impact how claims are paid. Over the past two decades, there have been a number of important developments in the areas of liability, property, and life and health insurance that have significantly changed insurance law. Accordingly, the Fourth Edition of Principles of Insurance Law has been substantially rewritten, reformatted, and refocused in order to offer the insurance law student and practitioner a broad perspective of both traditional insurance law concepts and cutting-edge legal issues affecting contemporary insurance law theory and practice. This edition not only expands the scope of topical coverage, but also segments the law of insurance in a manner more amenable to study, as well as facilitating the recombination and reordering of the chapters as desired by individual instructors. The Fourth Edition of Principles of Insurance Law includes new and expanded treatment of important insurance law developments, including:

- The critical role of insurance binders as temporary forms of insurance as illustrated in the World Trade Center property insurance disputes resulting from the terrorist attacks of September 11, 2001;
- The continuing debate between "legal formalists" and "legal functionalists" for "the heart and soul" of insurance contract law;
- What constitutes a policyholder's "reasonable expectation" regarding coverage;
- The current property and

liability insurance "crisis"; • Risk management and self-insurance issues; • Emerging, and frequently conflicting, case law concerning the intersection of insurance law and federal anti-discrimination regulation; • Ongoing interpretive battles over the preemptive scope of ERISA; • The United States Supreme Court ruling that a California statute attempting to leverage European insurers into honoring commitments to Holocaust era policies is preempted by the Executive's power over foreign affairs; • The State Farm v. Campbell decision, which struck down a \$145 million punitive damages award in an insurance bad faith claim as well as setting more restrictive parameters for the recovery of punitive damages; • New issues over the dividing line between "tangible" property typically covered under a property insurance policy and "intangible" property, which is typically excluded - an issue of increasing importance in the digital and cyber age; • Refinement of liability insurance law regarding trigger of coverage, duty to defend, reimbursement of defense costs, and apportionment of insurer and policyholder responsibility for liability payments; • The difficult-to-harmonize decisions concerning when a loss arises out of the "use" of an automobile; • Insurer bad faith and the availability, if any, of actions against a policyholder for "reverse bad faith"; and • The degree to which excess insurance and reinsurance may be subject to modified approaches to insurance policy construction.
